# Chapter 1 Getting Started

---

## 1.1 Definition and Questions

- 1) Scarcity exists because
- A) human wants exceed the resources available to satisfy them.
  - B) some individuals have low income.
  - C) the costs of production are high.
  - D) some people make bad economic decisions.
  - E) people take too much leisure time.

Answer: A

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 2) Scarcity
- A) is the inability to satisfy all our wants.
  - B) leads to higher prices.
  - C) applies only to people living in poverty.
  - D) is not something that affects very rich people.
  - E) used to exist everywhere but has been eliminated in advanced economies.

Answer: A

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 3) Scarcity requires that we
- A) produce efficiently.
  - B) learn to limit our wants.
  - C) have the most rapid economic growth possible.
  - D) have unlimited resources.
  - E) make choices about what goods and services to produce.

Answer: E

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 4) Scarcity means that
- A) what we can produce with our resources is greater than our material wants.
  - B) resources are unlimited.
  - C) wants are greater than what we can produce with our resources.
  - D) governments must make up for shortages in resources.
  - E) choices made in self-interest cannot be the same as those made in the social interest.

Answer: C

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Revised

AACSB: Reflective thinking

- 5) Because human wants are insatiable and unlimited while available resources are limited, people are said to face the problem of
- A) scarcity.
  - B) why to produce.
  - C) macroeconomics.
  - D) microeconomics.
  - E) social interest versus self-interest.

Answer: A

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 6) Which of the following statements *best* describes the study of economics? Economics studies how
- A) to organize production so that scarcity does not occur.
  - B) firms make profits.
  - C) we make choices in the face of scarcity.
  - D) to create incentives so that scarcity does not exist.
  - E) businesses reach decisions.

Answer: C

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 7) Scarcity forces people to
- A) choose among available alternatives.
  - B) cheat and steal.
  - C) be unwilling to help others.
  - D) live at a low standard of living.
  - E) consume as much as they can as quickly as they can.

Answer: A

Topic: Scarcity

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 8) Scarcity means we must
- A) consume less.
  - B) produce less.
  - C) make choices.
  - D) earn more.
  - E) work more.

Answer: C

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 9) What is the reason that all economic issues and problems occur?
- A) All nations use some form of money to buy and sell goods and services.
  - B) Humans are always wasteful and inefficient in production and consumption.
  - C) Powerful governments are able to control production and consumption.
  - D) Human wants exceed the resources available to satisfy them.
  - E) People seek only their own self-interest.

Answer: D

Topic: Scarcity

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 10) The study of economics is best described as a study of
- A) the factors that influence the stock and bond markets.
  - B) capitalism.
  - C) the choices made in producing goods and services.
  - D) coping with scarcity, and choices made as a result of scarcity in a society.
  - E) how people earn a living.

Answer: D

Topic: Definition of economics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

11) Which of the following statements *best* describes the study of economics? Economics studies how

- A) to organize production so that scarcity does not occur.
- B) firms make profits.
- C) we make choices in the face of scarcity.
- D) to create incentives so that scarcity does not exist.
- E) businesses reach decisions.

Answer: C

Topic: Definition of economics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

12) Which of the following best defines economics?

- A) Economics teaches how to limit our wants.
- B) Economics studies how to choose the best alternative when coping with scarcity.
- C) Economics helps you earn as much money as possible.
- D) Economics analyzes all aspects of human behavior in general.
- E) Economics is concerned with prices and quantities of goods and services, both at the individual level and at the industry level.

Answer: B

Topic: Definition of economics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

13) Economics is the social science that studies

- A) the real reasons people buy goods and services.
- B) the psychology of individuals and businesses.
- C) whether a nation has enough natural resources.
- D) how people make choices to cope with scarcity.
- E) how choices made in the social interest could eliminate scarcity.

Answer: D

Topic: Definition of economics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 14) Economics is best defined as the social science that studies
- A) how a person can get everything he or she wants.
  - B) the reason money exists.
  - C) the way to eliminate choices in our decisions.
  - D) the choices that societies, and the people and institutions that make up societies, make in dealing with the issue of scarcity.
  - E) how choices made in the social interest must conflict with choices made in the self-interest.

Answer: D

Topic: Definition of economics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 15) Microeconomics includes the study of the
- A) aggregate effects on the national economy.
  - B) recessions and inflation in the global economy.
  - C) choices made by individuals and businesses.
  - D) reasons why the government changes interest rates.
  - E) nationwide unemployment rate.

Answer: C

Topic: Microeconomics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 16) The primary focus of microeconomics is
- A) to examine the operation of the entire (aggregate) economy.
  - B) to examine the behavior and operation of the individual units or sectors that make up the economy.
  - C) our government's monetary policy.
  - D) the levels of employment and inflation.
  - E) to study how we managed to eliminate scarcity.

Answer: B

Topic: Microeconomics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

17) Which of the following is a microeconomic issue?

- A) The price of gasoline increases in the United States this year.
- B) The Brazilian economy experiences rapid economic growth.
- C) The unemployment rate soars in Spain.
- D) Inflation skyrockets in Russia.
- E) The U.S. government cuts taxes to combat a recession.

Answer: A

Topic: Microeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

18) Which of the following is a microeconomic issue?

- A) Growth in the U.S. economy slowed.
- B) Increased federal government expenditures have lowered the unemployment rate.
- C) The inflation rate fell this year.
- D) The quantity of wheat grown in the United States increases this year.
- E) The U.S. government cuts taxes to combat a recession.

Answer: D

Topic: Microeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

19) Which of the following is a microeconomic topic?

- i. K-Mart's decision to close stores that are not making a profit
  - ii. Home Depot's choice to hire more full-time employees because its sales increased
  - iii. Delta Airlines changes its fares.
- A) i only
  - B) ii only
  - C) i and iii
  - D) ii and iii
  - E) i, ii, and iii

Answer: E

Topic: Microeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

20) Which of the following is a microeconomic topic?

- A) Northwest Airlines analyzes the benefits of adding one more flight to Salt Lake City.
- B) Unemployment soars as taxes increase.
- C) The government leaves interest rates unchanged as the economy improves.
- D) Germany's government increases taxes to avoid a budget deficit.
- E) Chinese economic growth slows.

Answer: A

Topic: Microeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

21) Which of the following is a microeconomic topic?

- i. Gas prices increase after a hurricane hits the gulf coast.
  - ii. Xavier starts a new business designing web pages.
  - iii. Abby decides to practice an extra hour of soccer instead of studying.
- A) i, ii and iii
  - B) i only
  - C) ii and iii
  - D) ii only
  - E) i and ii

Answer: A

Topic: Microeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

22) Macroeconomics is the study of

- A) the actions of individual consumers.
- B) national or global economies.
- C) the actions of individual businesses.
- D) the government.
- E) how *ceteris paribus* affects causation.

Answer: B

Topic: Macroeconomics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

23) Which of the following BEST describes macroeconomics?

- A) It analyzes the aggregate effects on the national economy of the choices made by individuals, firms, and governments.
- B) It studies the choices that individuals and businesses make when coping with scarcity.
- C) It examines how the choices that individuals affect governments.
- D) It is not a social science because its predictions cannot be tested.
- E) Proving causation is never a problem for macroeconomics.

Answer: A

Topic: Macroeconomics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

24) Which of the following is a topic studied in macroeconomics?

- A) the pricing decisions in the computer hardware industry
- B) the effect on economic growth if the government raises taxes
- C) how the wheat industry determines how much wheat to grow
- D) the impact of labor unions on wages
- E) the impact of higher prices for gasoline on the number of SUVs people buy

Answer: B

Topic: Macroeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

25) Which of the following is a macroeconomic topic?

- A) The federal government's decision to spend more on environmental protection
- B) The county government's decision to increase the sales tax for your county
- C) Why did production and jobs expand slowly in 2011?
- D) General Motors decides what prices to set for their new models.
- E) The effect of floods in agricultural areas on the price and quantity of wheat

Answer: C

Topic: Macroeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Revised

AACSB: Reflective thinking

26) Which of the following is a macroeconomic issue?

- A) The price of a ticket to Walt Disney World in Orlando is increased.
- B) The National Football League signs a new television contract.
- C) The number of jobs and production in Zimbabwe increase.
- D) The Iowa corn harvest is smaller than normal.
- E) Utilities are required to install more anti-pollution devices.

Answer: C

Topic: Macroeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

27) Which of the following is a macroeconomic topic?

- i. China increases interest rates to slow its economic growth.
  - ii. Congress lowers tax rates to try and lower the unemployment rate.
  - iii. Nissan decides to produce more electric Leaf models and fewer Altima sedans.
- A) i and ii
  - B) i, ii and iii
  - C) iii only
  - D) i and iii
  - E) ii and iii

Answer: A

Topic: Macroeconomics

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

28) When you make the decision to spend your time attending class, which economic question are you answering?

- A) What?
- B) How?
- C) For whom?
- D) Why?
- E) Is this in the social interest?

Answer: A

Topic: Economic questions, what

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

29) Of the three major economic questions, which of the following is the best example of a "What?" question?

- A) Should automobiles be produced using workers or robots?
- B) Should higher-income or lower-income people buy SUVs?
- C) Should we make faster microprocessors or pest-resistant corn?
- D) Should migrant workers or domestic workers be used to pick grapes?
- E) What should doctors be paid?

Answer: C

Topic: Economic questions, what

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

30) When Ford decides to increase production of hybrid cars, it directly answers the \_\_\_\_\_ question.

- A) what
- B) how
- C) for whom
- D) where
- E) why

Answer: A

Topic: Economic questions, what

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

31) When Delta decides to quit flying to Lithuania, it directly answers the \_\_\_\_\_ question.

- A) what
- B) why
- C) for whom
- D) how
- E) when

Answer: A

Topic: Economic questions, what

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

32) The question of "What goods and services get produced?" most closely relates to which of the following issues?

- A) the distribution of goods and services in the economy
- B) producing goods and services in the least costly manner
- C) building a missile defense system, or putting a computer in every elementary school classroom
- D) obtaining specialized training to increase one's income
- E) taxing high income workers to give payments to poor households

Answer: C

Topic: Economic questions, what

Skill: Level 3: Using models

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

33) When a home builder decides to computerize all of its production schedules, it directly answers the \_\_\_\_\_ question.

- A) for whom
- B) what
- C) where
- D) how
- E) why

Answer: D

Topic: Economic questions, how

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

34) When Fresh Express Salads decides to mechanically pick all of its lettuce, it directly answers the \_\_\_\_\_ question.

- A) what
- B) how
- C) for whom
- D) where
- E) when

Answer: B

Topic: Economic questions, how

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

35) When the power company decides to use manpower to bury its lines, it directly answers the \_\_\_\_\_ question.

- A) what
- B) for whom
- C) how
- D) why
- E) when

Answer: C

*Topic: Economic questions, how*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Reflective thinking*

36) The question of "How are goods and services produced?" most closely addresses which of the following issues?

- A) Should Ford build SUVs or luxury cars?
- B) Should Ford use expensive industrial robots or inexpensive Mexican autoworkers to produce SUVs?
- C) Should contractors build residential housing or shopping malls?
- D) Is income distributed fairly in the United States?
- E) Why are Christmas trees popular only in December?

Answer: B

*Topic: Economic questions, how*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.1*

*Status: Revised*

*AACSB: Reflective thinking*

37) Of the three major economic questions, which of the following is the best example of a "How?" question?

- A) Should we produce more heavy fleece coats?
- B) Should we collect tolls on turnpikes using human toll collectors or mechanized toll machines?
- C) Should we build log homes or build factories from bricks?
- D) Should we spend more on health care?
- E) Should we eat more oatmeal?

Answer: B

*Topic: Economic questions, how*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Reflective thinking*

38) Which economic question depends on the incomes that people earn and the prices they pay for goods and services?

- A) What?
- B) How?
- C) For whom?
- D) Why?
- E) Where?

Answer: C

Topic: Economic questions, for whom

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

39) When the federal government decides to pay senators more than it pays soldiers, it answers the \_\_\_\_\_ question.

- A) why
- B) how
- C) for whom
- D) what
- E) where

Answer: C

Topic: Economic questions, for whom

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

40) When a third string NFL quarterback earns more than a police officer, society answers the \_\_\_\_\_ question.

- A) for whom
- B) what
- C) how
- D) why
- E) social interest vs. self-interest

Answer: A

Topic: Economic questions, for whom

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 41) When unskilled teens earn less than college graduates, society answers the \_\_\_\_\_ question.
- A) how
  - B) what
  - C) for whom
  - D) why
  - E) social interest versus self-interest

Answer: C

Topic: Economic questions, for whom

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 42) Canada has nationalized health care, so that everyone, regardless of their ability to pay, has some access to health care. Based on this observation, Canada has decided that "everyone, regardless of their ability to pay" is the answer to what microeconomic question?
- A) What type of health care will be produced and in what quantity?
  - B) How will health care be produced?
  - C) For whom will health care be produced?
  - D) Why will we offer health care?
  - E) Must we offer health care?

Answer: C

Topic: Economic questions, for whom

Skill: Level 3: Using models

Section: Checkpoint 1.1

Status: Old

AACSB: Analytical thinking

- 43) Choices that are best for the individuals that make them are choices in pursuit of
- A) the social interest.
  - B) efficiency.
  - C) incentives.
  - D) self-interest.
  - E) equity.

Answer: D

Topic: Self interest

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

44) Self interest

- A) reflects choices that are best for society as a whole.
- B) reflects choices that are best for the individual who makes them.
- C) has nothing to do with determining what goods are produced.
- D) occurs only when wants exceed available resources.
- E) cannot be used to determine how goods are produced.

Answer: B

Topic: *Self interest*

Skill: *Level 1: Definition*

Section: *Checkpoint 1.1*

Status: *Old*

AACSB: *Reflective thinking*

45) Choices that are best for the society as a whole are choices in pursuit of

- A) answering the "how" question.
- B) the social interest.
- C) self-interest.
- D) incentives.
- E) answering the "for whom" question.

Answer: B

Topic: *Social interest*

Skill: *Level 1: Definition*

Section: *Checkpoint 1.1*

Status: *Old*

AACSB: *Reflective thinking*

46) The characteristic from which all economic problems arise is

- A) political decisions.
- B) providing a minimal standard of living for every person.
- C) how to make a profit.
- D) hunger.
- E) scarcity.

Answer: E

Topic: *Scarcity*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 1.1*

Status: *Old*

AACSB: *Reflective thinking*

47) All economic questions and problems arise from

- A) the fact that society has more than it needs.
- B) turmoil in the stock market.
- C) the unequal distribution of income.
- D) a society's wants exceeding what its scarce resources can produce.
- E) the difference between self-interest and social interest.

Answer: D

Topic: *Scarcity*

Skill: *Level 1: Definition*

Section: *Checkpoint 1.1*

Status: *Old*

AACSB: *Reflective thinking*

- 48) Scarcity results from the fact that
- A) people's wants exceed the resources available to satisfy them.
  - B) not all goals are desirable.
  - C) we cannot answer the major economic questions.
  - D) choices made in self-interest are not always in the social interest.
  - E) the population keeps growing.

Answer: A

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Revised

AACSB: Reflective thinking

- 49) To economists, scarcity means that
- A) limited wants cannot be satisfied by the unlimited resources.
  - B) a person looking for work is not able to find work.
  - C) the number of people without jobs rises when economic times are bad.
  - D) there can never be answers to the *what, how* or *for whom* questions.
  - E) unlimited wants cannot be satisfied by the limited resources.

Answer: E

Topic: Scarcity

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 50) Which of the following statements is true regarding scarcity?
- A) Scarcity affects poorer countries only.
  - B) An economy experiences scarcity only when the incomes of its citizens decline.
  - C) Poor people experience scarcity more often than do rich people.
  - D) All citizens in a wealthy economy experience scarcity.
  - E) Scarcity could be overcome if people would make all choices in the social interest.

Answer: D

Topic: Scarcity

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

- 51) People must make choices because
- A) most people enjoy shopping.
  - B) of scarcity.
  - C) there are many goods available.
  - D) the question "What goods and services are produced?" is not adequately answered.
  - E) making choices is in the social interest.

Answer: B

Topic: Scarcity

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

52) Which of the following is a microeconomic issue?

- A) Why has unemployment risen nationwide?
- B) Why has economic growth been rapid in China?
- C) What is the impact on the quantity of Pepsi purchased if consumers' tastes change in favor of non-carbonated drinks?
- D) Why is the average income lower in Africa than in Latin America?
- E) Why did overall production increase within the United States last year?

Answer: C

Topic: Microeconomics

Skill: Level 1: Definition

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

53) Microeconomics includes the study of

- A) how countries decide to fund their budget deficits.
- B) the choices that individuals and businesses make.
- C) how a nation promotes economic growth.
- D) the effect on the national economy of the choices that individuals make.
- E) the overall amount of production within the economy.

Answer: B

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

59) The question "Should economics majors or sociology majors earn more after they graduate?" is an example of a \_\_\_\_\_ question.

- A) what
- B) how
- C) for whom
- D) where
- E) why

Answer: C

Topic: Economic questions, for whom

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

60) If a decision is made and it is the best choice for society, the decision is said to be

- A) a valid economic choice.
- B) made in self-interest.
- C) made in social interest.
- D) consistent with scarcity.
- E) a want-maximizing choice.

Answer: C

Topic: Social interest

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Reflective thinking

## 1.2 The Economic Way of Thinking

### 1) Rational choice

- A) is a choice that uses the available resources to best achieve the objective of the person making the choice.
- B) is always efficient.
- C) is what you must give up to get what you want.
- D) is made by comparing different incentives.
- E) provides the answer to only the "how" question.

Answer: A

Topic: Rational choice

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

### 2) A rational choice is one that

- A) always turns out for the best for the decision maker.
- B) creates no costs for the decision maker.
- C) must be made with perfect information.
- D) uses the available resources to most effectively satisfy the wants of the person making the choice.
- E) is made in the social interest rather than the self-interest.

Answer: D

Topic: Rational choice

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

### 3) What is NOT true about rational choice?

- A) It can result in different decisions for different individuals.
- B) It involves comparing costs and benefits.
- C) It might turn out not to have been the best choice after the event.
- D) It is a choice that uses the available resources to best achieve the objective of the person making the choice.
- E) It is the same for all individuals.

Answer: E

AACSB: Reflective thinking

- 5) An opportunity cost is
- A) the dollar amount that is paid.
  - B) anything the decision maker believes costs to be.
  - C) the benefits of the highest-valued alternative forgone.
  - D) whatever is paid out and cannot be reduced or reversed.
  - E) another term for all the sunk costs.

Answer: C

Topic: Opportunity cost

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 6) Economists measure opportunity cost
- A) only when it is on the margin.
  - B) as the best thing given up.
  - C) as the sum of all forgone opportunities.
  - D) as the same as marginal benefit.
  - E) as equal to the sum of all the sunk costs.

Answer: B

Topic: Opportunity cost

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 7) The opportunity cost of a decision is measured in terms of
- A) time.
  - B) the price of the alternative we choose.
  - C) the next best thing given up.
  - D) the price of a new opportunity that arises.
  - E) sunk cost.

Answer: C

Topic: Opportunity cost

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 8) You have chosen to take a trip during spring break. If you had not gone, you would either have worked at a temporary job or studied for exams. The opportunity cost of your trip is
- A) the wages you would have earned from working.
  - B) the lower grade earned by not studying.
  - C) the wages you would have earned from working and the lower grade earned by not studying.
  - D) the value of the trip.
  - E) We cannot determine what the opportunity cost is without knowing which alternative, working or studying, you would have preferred.

Answer: E

Topic: Opportunity cost

25) Making choices on the margin means

- A) scribbling on the edges of your notebook paper.
- B) comparing all relevant alternatives systematically and incrementally.
- C) making a decision based on emotions.
- D) making decisions in the largest possible increments.
- E) taking account of all marginal benefits, all opportunity costs, and all sunk costs.

Answer: B

Topic: On the margin

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

26) Decision making on the margin involves

- A) comparing the marginal cost and marginal benefits when making a decision.
- B) comparing the total cost and the total benefit when making a decision.
- C) eliminating the additional cost when making a decision.
- D) determining the total benefits of a decision.
- E) comparing the benefits from the social interest to the benefits from the person's self-interest.

Answer: A

Topic: On the margin

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

27) In making your decision whether to take a trip during spring break, you compare all the other activities you could undertake. As a result, you

- A) are making a choice on the margin.
- B) limit the cost and the benefits you can gain.
- C) are not making a rational choice.
- D) do not face an opportunity cost.
- E) must have made a choice in the social interest.

Answer: A

Topic: On the margin

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 28) To make a rational choice, a person
- A) compares the extra benefits of one more unit to the extra costs of one more unit.
  - B) adds the total benefits and the total costs and then compares the two totals.
  - C) adds the total benefits to determine if the total is large enough.
  - D) adds the total costs to determine if the total is small enough.
  - E) takes account of all benefits and all opportunity costs, including both marginal costs and sunk costs.

Answer: A

- D) a positive statement
- E) a statement on the margin

Answer: C

Topic: Normative statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

63) Which of the following statements is a normative statement?

- A) Inflation has been at an all-time low this year.
- B) The minimum wage should be increased to \$8.50 per hour.
- C) Unemployment this month has increased by less than 0.5 percentage point..
- D) Additional spending on education has not produced any rise in test scores.
- E) Pepsi is less expensive than Coke this week.

Answer: B

Topic: Normative statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

64) Which of the following is an example of a normative statement?

- A) If cars become more expensive, fewer people will buy them.
- B) Car prices should be affordable.
- C) If wages increase, firms will fire some workers.
- D) Fewer people die in larger cars than in smaller cars.
- E) Cars emit pollution.

Answer: B

Topic: Normative statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 65) Which of the following statements is a normative statement?
- A) Every American household should have health care insurance coverage.
  - B) Military spending as a percent of government spending decreased by 5 percent in the 1990s.
  - C) Welfare reform has decreased the amount the government spends on welfare.
  - D) The price of computers fell last year.
  - E) Fewer people are unemployed this year than last year.

Answer: A

Topic: Normative statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 66) Congress and the President passed a national health care policy. This is an example of
- A) the government using economic tools to make policy decisions.
  - B) answering the "how" question.
  - C) increasing the marginal cost of health care.
  - D) increasing the marginal benefit of health care.
  - E) normative versus positive economics.

Answer: A

Topic: Government economic policy

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 67) Opportunity cost is best defined as
- A) how much money is paid for something.
  - B) how much money and time it takes to consume something.
  - C) the value of the highest-valued alternative that is forgone in making a choice.
  - D) the total of all other alternatives that are forgone in making a choice.
  - E) the sunk cost of any decision.

Answer: C

Topic: Opportunity cost

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

68) John has two hours of free time this evening. He ranked his alternatives, first go to a concert, second go to a movie, third study for an economics exam, and fourth answer his e-mail. What is the opportunity cost of attending the concert for John?

- A) attending a movie
- B) studying for an economics exam
- C) answering his e-mail
- D) attending a movie, studying for an economics exam, and answering his e-mail
- E) going to the concert because that is what John chooses to do

Answer: A

Topic: Opportunity cost

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Analytical thinking

69) Jamie has enough money to buy either a Mountain Dew, or a Pepsi, or a bag of chips. He chooses to buy the Mountain Dew. The opportunity cost of the Mountain Dew is

- A) the Pepsi and the bag of chips.
- B) the Pepsi or the bag of chips, whichever is the highest-valued alternative forgone.
- C) the Mountain Dew.
- D) the Pepsi because it is a drink, as is the Mountain Dew.
- E) zero because he enjoys the Mountain Dew.

Answer: B

Topic: Opportunity cost

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Analytical thinking

70) Amy can study for an hour or spend that hour sleeping or going out for dinner. If she decides to study for the hour, the opportunity cost of the hour spent studying is

- A) definitely going to sleep.
- B) studying, since this is the choice she opted for.
- C) sleeping or going out for dinner, whichever she would have preferred the most.
- D) sleeping and going out for dinner.
- E) definitely going out to dinner because she must eat at some time.

Answer: C

Topic: Opportunity cost

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Analytical thinking

- 71) If there is no scarcity,
- A) the opportunity cost of an action would be greater than its sunk cost.
  - B) an action would have zero opportunity cost.
  - C) choices are no longer rational.
  - D) marginal cost of an action is greater than its marginal benefit.
  - E) all marginal benefits would equal zero.

Answer: B

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 1.2

Status: Old

AACSB: Analytical thinking

- 72) The benefit of an activity is
- A) purely objective and measured in dollars.
  - B) the gain or pleasure that it brings.
  - C) the value of its opportunity cost.
  - D) measured by what must be given up to get one more unit of the activity.
  - E) not measurable on the margin.

Answer: B

Topic: Benefit

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 73) The \_\_\_\_\_ of something is the gain or pleasure that it brings.
- A) opportunity cost
  - B) benefit
  - C) marginal cost
  - D) rational choice
  - E) rational margin

Answer: B

Topic: Benefit

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 74) The cost of a one-unit increase in an activity
- A) is called the total one-unit cost.
  - B) is called the marginal cost.
  - C) decreases as more of the activity is done.
  - D) is called the marginal benefit/cost.
  - E) is called the unit cost.

Answer: B

Topic: Marginal cost

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 75) The marginal benefit of an activity is
- i. the benefit from a one-unit increase in the activity.
  - ii. the benefit of a small, unimportant activity.
  - iii. measured by what the person is willing to give up to get one additional unit of the activity.
- A) i only                      B) ii only                      C) iii only                      D) i and iii                      E) ii and iii

Answer: D

Topic: Marginal benefit

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 76) The additional benefit of increasing some activity by one-unit is called the
- A) marginal benefit.
  - B) opportunity cost.
  - C) total benefit.
  - D) scarcity.
  - E) unit cost/benefit.

Answer: A

Topic: Marginal benefit

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 77) If the marginal benefit of the next slice of pizza exceeds the marginal cost, you will
- A) eat the slice of pizza.
  - B) not eat the slice of pizza.
  - C) be unable to choose between eating or not eating.
  - D) eat half the slice.
  - E) More information is needed about how much the marginal benefit exceeds the marginal cost to determine if you will or will not eat the slice.

Answer: A

Topic: Making rational choices

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 78) When people make rational choices, they
- A) behave selfishly.
  - B) do not consider their emotions.
  - C) weigh the costs and benefits of their options and act to satisfy their wants.
  - D) necessarily make a decision in the social interest.
  - E) are necessarily making the best decision.

Answer: C

Topic: Rational choice

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 79) By donating \$1,000 to the Salvation Army, Caroline reduces her taxable income. To Caroline, the reduction in her taxable income is
- A) a marginal benefit.
  - B) an opportunity cost.
  - C) an incentive.
  - D) a marginal cost.
  - E) the margin.

Answer: C

Topic: Incentives

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 80) When the Dallas Cowboys score more than 30 points in a game, they win the game. This is an example of
- A) an economic theory.
  - B) a correlation.
  - C) an incentive to win the game.
  - D) a normative statement.
  - E) a statement on the margin.

Answer: B

Topic: Correlation

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 81) A positive statement
- A) must always be right.
  - B) cannot be tested.
  - C) might be right or wrong.
  - D) depends on someone's value judgment.
  - E) cannot be negative.

Answer: C

Topic: Positive statements

Skill: Level 1: Definition

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 82) Which of the following is a positive statement?
- A) Taxes should be lower because then people get to keep more of what they earn, so they will work more.
  - B) My economics class should last for two terms because it is my favorite class.
  - C) A 10 percent increase in income leads to a 4 percent increase in the consumption of beef.
  - D) Given their negative impact on productivity, the government should eliminate labor unions.
  - E) The class average on this test should be more than 80 percent.

Answer: C

Topic: Positive statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

- 83) Which of the following is NOT a normative economic statement?
- A) States should reduce the tax on heating fuel oil during the winter.
  - B) People over the age of 75 should not be allowed to drive cars.
  - C) Teenagers are responsible for most driving fatalities.
  - D) We don't spend enough money on anti-smoking campaigns.
  - E) The price of gasoline is too high.

Answer: C

Topic: Normative statements

Skill: Level 2: Using definitions

Section: Checkpoint 1.2

Status: Old

AACSB: Reflective thinking

### 1.3 Appendix: Making and Using Graphs

- 1) The horizontal axis in a graph
- A) measures time on a scatter diagram.
  - B) measures the quality of a variable.
  - C) is named the  $y$ -axis.
  - D) is named the  $x$ -axis.
  - E) is called the origin.

Answer: D

Topic: Axes

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 2) Most economic graphs have two lines perpendicular to each other. The vertical line is called the
- A) origin.
  - B)  $y$ -axis.
  - C)  $x$ -axis.
  - D) variable.
  - E) time axis.

Answer: B

Topic: Axes

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 3) The vertical axis in a graph
- A) is named the  $y$ -axis.
  - B) is named the  $x$ -axis.
  - C) measures time in a cross-section and time series graph.
  - D) has no origin.
  - E) measures time *only* in a time series graph.

Answer: A

Topic: Axes

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 4) Most economic graphs have two lines perpendicular to each other. Where these lines meet is called the
- A) origin.
  - B)  $y$ -axis.
  - C)  $x$ -axis.
  - D) variable.
  - E) point of beginning.

Answer: A

Topic: Origin

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 5) A graph of the value of one variable against the value of another variable is known as a
- A) two-dimensional graph.
  - B) three-dimensional graph.
  - C) time-series graph.
  - D) scatter diagram.
  - E) two-variable graph.

Answer: D

Topic: Scatter diagrams

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 6) A scatter diagram can be used to see
- A) if the value of a variable is rising or falling.
  - B) the value of a variable for different groups in a population.
  - C) if a relationship exists between two variables.
  - D) how a variable behaves over time.
  - E) whether a variable is positively or negatively related to itself.

Answer: C

Topic: Scatter diagrams

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 7) To show how a variable \_\_\_\_\_, we typically use a \_\_\_\_\_.
- A) relates to another variable; time series graph
  - B) relates to another variable; pie chart
  - C) changes over time; time series graph
  - D) changes over time; cross section graph
  - E) changes over time; cross time chart

Answer: C

Topic: Scatter diagrams

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 8) Which type of graph is most useful in determining if two variables are correlated?
- A) time-series
  - B) scatter diagram
  - C) cross-section
  - D) variable-correlation figure
  - E) None of the above answers is correct.

Answer: B

Topic: Scatter diagrams

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 9) The figure above shows a
- A) time-series graph.
  - B) scatter diagram.
  - C) cross-section graph.
  - D) slope.
  - E) trend diagram.

Answer: B

Topic: Scatter diagrams

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 10) A time-series graph measures
- A) the value of one variable against the value of another variable.
  - B) the value of an economic variable for different groups in a population at a point in time.
  - C) time on the  $x$ -axis and the variable or variables in which we are interested on the  $y$ -axis.
  - D) time on the  $y$ -axis and the variable or variables in which we are interested on the  $x$ -axis.
  - E) time on both the  $x$ -axis and  $y$ -axis and the variable or variables in which we are interested in the rest of the figure.

Answer: C

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

11) A time series graph

- A) shows how a variable changes over time.
- B) uses bars rather than lines.
- C) shows points in a scatter diagram.
- D) is similar to a cross-section graph because both can show trends over time.
- E) is in the shape of a pie.

Answer: A

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

12) A steep slope in a time series graph means the variable is

- A) high.
- B) falling.
- C) rising or falling quickly.
- D) rising or falling slowly.
- E) very close to its trend point.

Answer: C

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

13) Which type of economic graph reveals trends in data?

- A) cross-section graph
- B) time-series graph
- C) scatter diagram
- D) Answers A and C are correct.
- E) Answers A, B, and C are all correct.

Answer: B

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

14) A time series graph

- A) shows how a certain variable changes over time.
- B) uses bars rather than lines.
- C) shows points that are scattered.
- D) depicts a series of good economic times a nation had.
- E) is not useful if the goal is to determine a variable's trend.

Answer: A

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

15) A time-series graph displays the price of gold. The slope of the line is negative for periods when the

- A) price of gold is falling.
- B) price of gold is rising.
- C) quantity of gold is falling.
- D) price of gold is low and not changing.
- E) price of gold fluctuates.

Answer: A

Topic: Time-series graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

16) A graph shows the wage rate of factory workers. The slope of the line is positive for periods when the wage rate is

- A) falling.
- B) rising.
- C) high and not changing.
- D) low and falling.
- E) high and falling.

Answer: B

Topic: Time-series graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

17) A trend is

- A) a measure of closeness on a scatter diagram.
- B) a general tendency for a variable to rise or fall.
- C) the maximum value of a variable.
- D) the minimum value of a variable.
- E) the difference between the maximum value of a variable and the minimum value of the variable.

Answer: B

Topic: Trend

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 18) A time series graph reveals whether there is a \_\_\_\_\_, which represents \_\_\_\_\_.
- A) trend in a variable; a general tendency for the variable to rise or fall
  - B) relationship between two variables; a cross-section relationship
  - C) trends in two variables; unrelated variables
  - D) relationship between two variables; a trend in a variable
  - E) cross-section relationship; a general tendency for the variables to rise or fall

Answer: A

Topic: Trend

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 19) Trend refers to
- A) the scale used on the  $x$ - and  $y$ -axes.
  - B) increases but not decreases of a variable.
  - C) decreases but not increases of a variable.
  - D) a general tendency for a variable to rise or fall.
  - E) the difference between the maximum value of the variable and the minimum value of the variable.

Answer: D

Topic: Trend

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 20) In the above figure, the diagram shows
- A) a downward trend in  $x$ .
  - B) an upward trend in  $x$ .
  - C) a scatter diagram.
  - D) a two-variable scatter diagram.
  - E) a cross-section graph between  $x$  and time.

Answer: A

Topic: Trend

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 21) A cross-section graph
- A) is divided into different sections.
  - B) shows the values of an economic variable for different groups in a population at a point in time.
  - C) measures time on the  $x$ -axis and the variable in which we are interested on the  $y$ -axis.
  - D) Both answers A and C are correct.
  - E) Both answers A and B are correct.

Answer: B

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 22) A graph that shows the value of an economic variable for different groups in a population at a given time is called a
- A) scatter diagram.
  - B) time-series graph.
  - C) pie chart.
  - D) cross-section graph.
  - E) fixed-time diagram.

Answer: D

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 23) A graph shows the average wage of various demographic groups in 2012. The kind of graph used to show these data would be a
- A) scatter diagram.
  - B) time-series graph.
  - C) cross-section graph.
  - D) Venn diagram.
  - E) fixed-year figure.

Answer: C

Topic: Cross-section graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 24) A graph showing the values of an economic variable for different groups in a population at a point in time is called a
- A) cross-section graph.
  - B) time-series graph.
  - C) scatter diagram.
  - D) Venn diagram.
  - E) None of the above answers is correct.

Answer: A

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

25) \_\_\_\_\_ shows the values of a variable for different groups in the population at a certain point in time.

- A) A time-series graph
- B) The origin
- C) A cross-section graph
- D) A scatter plot
- E) A trend-line graph

Answer: C

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix - Checkpoint 1

Status: Old

AACSB: Analytical thinking

26) A cross-section graph

- A) is divided into different sections.
- B) shows values of an economic variable for different groups in a population at a point in time.
- C) measures time on the  $x$ -axis and the variable in which we are interested on the  $y$ -axis.
- D) Both answers A and C are correct.
- E) Both answers B and C are correct.

Answer: B

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix - Checkpoint 1

Status: Old

AACSB: Analytical thinking

27) You have data for the amount of rainfall in 50 cities for the month of June. The type of graph to best display these data would be a

- A) time-series graph.
- B) multi-variable time series graph.
- C) cross-section graph.
- D) scatter diagram.
- E) trend-line diagram.

Answer: C

Topic: Cross-section graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix - Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 28) You have data for sales of pizza for each of the 50 states in 2011. The type of graph to best display these data would be a
- A) cross-section graph.
  - B) time-series graph.
  - C) scatter diagram.
  - D) multi-variable time-series graph.
  - E) trend-line diagram.

Answer: A

Topic: Cross-section graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 29) A graph shows the average SAT scores for males and females in 2012. The kind of graph used to show these data would be a
- A) scatter diagram.
  - B) time-series graph.
  - C) cross-section graph.
  - D) time-stationary graph.
  - E) trend figure.

Answer: C

Topic: Cross-section graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 30) Demonstrating how an economic variable changes from one year to the next is best illustrated by a
- A) scatter diagram.
  - B) time-series graph.
  - C) linear graph.
  - D) cross-section graph.
  - E) Venn diagram.

Answer: B

Topic: Time-series graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 31) To show the values of an economic variable for different groups in a population at a point in time, it is best to use a
- A) scatter diagram.
  - B) time-series graph.
  - C) linear graph.
  - D) cross-section graph.
  - E) trend-section diagram.

Answer: D

Topic: Cross-section graph

Skill: Level 1: Definition

Section: Chapter 1 Appendix - Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 32) A graph that shows how the amount of advertising expenditure differs among various industries can be shown
- A) by a cross-section graph.
  - B) by a time-series graph.
  - C) as a trend.
  - D) by a scatter diagram.
  - E) by a trend-section graph.

Answer: A

Topic: Cross-section graph

Skill: Level 3: Using models

Section: Chapter 1 Appendix - Checkpoint 1

Status: Old

AACSB: Analytical thinking

- 33) A linear relationship
- A) when graphed, is a straight line.
  - B) when graphed, is a line whose slope changes.
  - C) can be a positive or a negative relationship.
  - D) Both answers A and C are correct.
  - E) Both answers A and B are correct.

Answer: D

Topic: Linear relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix - Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 34) A positive relationship exists between two variables if
- A) one variable has "positively" no effect on the other variable.
  - B) a decrease in one variable is associated with an increase in the other variable.
  - C) a decrease in one variable is associated with a decrease in the other variable.
  - D) an increase in one variable is associated with both a decrease and an increase in the other variable.
  - E) None of the above answers is correct.

Answer: C

Topic: Positive relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 35) If two variables are positively related, then
- A) one variable causes the other.
  - B) an increase in one variable is accompanied by a decrease in the other.
  - C) an increase in one variable is accompanied by an increase in the other.
  - D) they change together, but not necessarily in the same direction.
  - E) neither variable can be positively related to any other variable.

Answer: C

Topic: Positive relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 36) As a person increases his or her caloric intake, the person's weight increases, *ceteris paribus*. The relationship between the person's caloric intake and the person's weight is an example of
- A) unrelated variables.
  - B) a positive relationship.
  - C) a negative relationship.
  - D) a single point on a graph.
  - E) a trended relationship.

Answer: B

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 37) If there is a positive relationship between two variables,
- A) the graph of the relationship will be upward sloping.
  - B) the graph of the relationship will be downward sloping.
  - C) the slope of the line graphing the relationship will be negative.
  - D) Both answers A and C are correct.
  - E) Both answers B and C are correct.

Answer: A

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 38) If the change in  $y = 10$  and the change in  $x = 3$ , there is
- A) a positive relationship between  $y$  and  $x$ .
  - B) a negative relationship between  $y$  and  $x$ .
  - C) an independent relationship between  $y$  and  $x$ .
  - D) no relationship between  $y$  and  $x$ .
  - E) a +0.33 relationship between the two variables.

Answer: A

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 39) Whenever people's incomes increase, they buy more guitars. Hence a scatter diagram shows that the relationship between income and guitars purchased is
- A) a positive relationship.
  - B) a linear relationship.
  - C) a negative relationship.
  - D) some sort of relationship, but whether it is positive or negative depends on whether income is plotted on the vertical or horizontal axis.
  - E) a U-shaped relationship.

Answer: A

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

40) Which of the following statements is correct?

- A) When a line slopes downwards moving to the right, the variable measured on the  $x$ -axis and the variable measured on the  $y$ -axis are directly related.
- B) When a line slopes upwards moving to the right, the variable measured on the  $x$ -axis and the variable measured on the  $y$ -axis are directly related.
- C) The higher the temperature, the more ice cream people consume. Thus the temperature and ice cream consumption are inversely related.
- D) If two variables are directly related, a graph of the two variables has a negative slope.
- E) None of the above statements is correct.

Answer: B

Topic: Positive and negative relationships

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

41) If  $x$  increases whenever  $y$  decreases, then  $x$  and  $y$  are

- A) not related.
- B) positively related.
- C) directly related.
- D) negatively related.
- E) related but whether positively or negatively related depends on whether the  $x$  variable or the  $y$  variable is plotted on the vertical axis.

Answer: D

Topic: Negative relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

42) Whenever one variable increases, another variable decreases. The two variables are

- A) definitely related through a third variable.
- B) negatively related.
- C) positively related.
- D) unrelated to each other.
- E) related but whether positively or negatively related depends on which variable is plotted on the vertical axis.

Answer: B

Topic: Negative relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 43) If  $x$  increases and as a result  $y$  decreases, then  $x$  and  $y$  are
- A) not related because the relationship is a causal one.
  - B) positively related.
  - C) negatively related.
  - D) directly related.
  - E) trend-line related.

Answer: C

Topic: Negative relationship

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 44) "As the price of gasoline increases, fewer people buy cars that are gas guzzlers." A graph showing this relationship would
- A) have a negative slope.
  - B) have a positive relationship.
  - C) have a direct relationship.
  - D) be a horizontal line.
  - E) be a vertical line.

Answer: A

Topic: Negative relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 45) As the number of days without rain increases, the amount of wheat grown per acre declines. A graph showing this relationship shows
- A) a horizontal line.
  - B) a vertical line.
  - C) a positive relationship.
  - D) a line with a positive slope.
  - E) None of the above answers is correct.

Answer: E

Topic: Negative relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

46) As the price of home heating oil rises, families buy less home heating oil. Hence a scatter diagram with the price of home heating oil on the vertical axis and the quantity purchased on the horizontal axis reveals a \_\_\_\_\_ relationship.

- A) positive
- B) linear
- C) time-series
- D) negative
- E) cross-sectional

Answer: D

Topic: Negative relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix - Checkpoint 2

Status: Old

AACSB: Analytical thinking

47) If the change in  $y = -4$  and the change in  $x = 2$ , there is

- A) an independent relationship between  $y$  and  $x$ .
- B) a positive relationship between  $y$  and  $x$ .
- C) a negative relationship between  $y$  and  $x$ .
- D) no relationship between  $y$  and  $x$ .
- E) a relationship between  $x$  and  $y$  but more information is needed to determine if it is a negative or positive relationship.

Answer: C

Topic: Negative relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix - Checkpoint 2

Status: Old

AACSB: Analytical thinking

48) An independent relationship between two variables is shown in a graph by

- A) an upward-sloping line.
- B) a horizontal or a vertical line.
- C) a downward-sloping line.
- D) a steeply sloped line.
- E) any straight line curve.

Answer: B

Topic: Unrelated variables

Skill: Level 1: Definition

Section: Chapter 1 Appendix - Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 49) If two variables are unrelated, their graph is
- A) either a horizontal or a vertical line.
  - B) a downward-sloping line.
  - C) an upward-sloping line.
  - D) a curved line.
  - E) None of the above answers is correct because it is not possible to graph unrelated variables.

Answer: A

Topic: Unrelated variables

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 50) Consider a diagram in which the variable measured on the  $y$ -axis remains constant while the variable measured on the  $x$ -axis increases. The graph of these two variables is
- A) a vertical line.
  - B) a horizontal line.
  - C) a line that has positive slope.
  - D) a line that has a negative slope.
  - E) non-existent because the two variables are not related.

Answer: B

Topic: Unrelated variables

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

AACSB: Analytical thinking

59) If a curve rises and then falls, it has a

- A) maximum.
- B) minimum.
- C) linear relationship.
- D) constant slope relationship.
- E) slope that is negative and then positive.

Answer: A

Topic: Maximum

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 60) As a shoe factory adds more workers, shoe production grows, reaches a maximum, and then shrinks. In a diagram that has the number of workers on the horizontal axis and the number of shoes on the vertical axis, the relationship between the number of workers and the number of shoes starts as \_\_\_\_\_ and then, after the maximum point, is \_\_\_\_\_.
- A) positive; negative
  - B) negative; positive
  - C) linear; negative
  - D) positive; linear
  - E) positive; nonexistent

Answer: A

Topic: Maximum

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 61) As a curve approaches a maximum point, the slope will
- A) be positive and then negative after the maximum point.
  - B) be negative and then positive after the maximum point.
  - C) remain constant on either side of the maximum point.
  - D) increase before and after the maximum point.
  - E) decrease before and after the maximum point.

Answer: A

AACSB: Analytical thinking

- 78) "The change in the value of the variable measured on the  $y$ -axis divided by the change in the value of the variable measured on the  $x$ -axis" is the definition of
- A) a graph.
  - B) slope.
  - C) a curve.
  - D) a relationship.
  - E) a trend.

Answer: B

Topic: Slope

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

- 79) The slope of a line equals the change in the variable measured along the
- A)  $x$ -axis divided by the change in the variable measured along the  $y$ -axis.
  - B)  $y$ -axis divided by the change in the variable measured along the  $x$ -axis.
  - C)  $x$ -axis minus the change in the variable measured along the  $y$ -axis.
  - D)  $x$ -axis multiplied by the change in the variable measured along the  $y$ -axis.
  - E)  $y$ -axis minus the change in the variable measured along the  $x$ -axis.

Answer: B

Topic: Slope

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

80) The slope

- A) of a straight line is the same regardless of where on the line it is calculated.
- B) equals the change in the value of the variable measured on the  $x$ -axis divided by the change in the variable measured on the  $y$ -axis.
- C) will be small if a large change in the variable measured on the  $y$ -axis is associated with a small change in the variable measured on the  $x$ -axis.
- D) equals the change in the value of the variable measured on the  $y$ -axis minus the change in the variable measured on the  $x$ -axis.
- E) falls as the  $x$  variable increases if the line has a negative slope.

Answer: A

Topic: Slope

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

81) With  $y$  measured on the vertical axis and  $x$  measured on the horizontal axis, the slope of a straight line is defined as

- A)  $y/x$ .
- B)  $x/y$ .
- C) (change in  $y$ )/(change in  $x$ ).
- D) (change in  $x$ )/(change in  $y$ ).
- E)  $y - x$ .

Answer: C

Topic: Slope of a straight line

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

82) In a graph, a straight line has a negative slope if the line

- A) is vertical.
- B) is horizontal.
- C) falls from left to right.
- D) rises from left to right.
- E) shows a trend.

Answer: C

Topic: Slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

83) A curve with a positive but decreasing slope represents a relationship where, every time the variable measured along the horizontal axis increases by one unit, the variable measured along the vertical axis

- A) increases by a constant amount.
- B) increases by an increasing amount.
- C) increases by a decreasing amount.
- D) decreases.
- E) does not change by much.

Answer: C

Topic: Slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

84) The slope

- A) of a straight line is the same regardless of where on the line it is calculated.
- B) equals the change in the value of the variable measured on the vertical axis divided by the change in the variable measured along the horizontal axis.
- C) will be small if a large change in the variable measured on the vertical axis is associated with a small change in the variable measured along the horizontal axis.
- D) Answers A and B are correct.
- E) Answers A and C are correct.

Answer: D

Topic: Slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

85) Which of the following statements is correct?

- A) The slope of a straight line changes depending where on the line it is calculated.
- B) The slope of a curved line is not defined because it is impossible to calculate the slope along a curved line.
- C) A straight line that slopes upward moving to the right has a positive slope.
- D) Answers A and B are correct.
- E) Answers A and C are correct.

Answer: C

Topic: Slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

- 86) If a small change in the  $x$  variable results in a large change in the  $y$  variable, the curve will be
- A) positively sloped.
  - B) negatively sloped.
  - C) steep.
  - D) flat.
  - E) trended.

Answer: C

Topic: Slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

- 87) Suppose the relationship between a person's age and his or her height is plotted with the age measured along the  $x$ -axis and the height measured along the  $y$ -axis. Then, the curve showing this relationship is
- A) a straight line with a positive slope.
  - B) positively sloped and becoming less steep.
  - C) a straight line with a negative slope.
  - D) negatively sloped and becoming less steep.
  - E) positively sloped and becoming more steep.

Answer: B

Topic: Positive slope

Skill: Level 3: Using models

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

- 88) If the quantity of the variable on the  $y$ -axis increases by 10 when the quantity of the variable on the  $x$ -axis decreases by 2, then the slope of the curve equals
- A) 2.
  - B) -10.
  - C) 10.
  - D) -5.
  - E) None of the above answers is correct.

Answer: D

Figure A

Figure B

Figure C

Figure D

99) In the above figure, which of the figures shows a relationship between  $x$  and  $y$  with a negative slope?

- A) Figure A
- B) Figure B
- C) Figure C
- D) Figure D
- E) Both Figure A and Figure B

Answer: B

Topic: Negative slope

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

100) In the above figure, which of the figures show(s) a relationship between  $x$  and  $y$  with a positive slope?

- A) Figure A and Figure D
- B) Figure B and Figure C
- C) Figure C only
- D) Figure D only
- E) Figure A and Figure B

Answer: A

Topic: Positive slope

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

101) The figure above shows the relationship between the time a student spends studying and the student's GPA that semester. This figure shows \_\_\_\_\_ relationship between the time spent studying and the GPA.

- A) a positive but not linear
- B) a negative
- C) no
- D) a positive, linear
- E) a cross-sectionally trended

Answer: A

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 3

Status: Old

AACSB: Analytical thinking

- 102) The figure above shows the relationship between the time a student spends studying and the student's GPA that semester. The slope of the relationship at point *A* \_\_\_\_\_ the slope at point *B*.
- A) is greater than
  - B) is less than
  - C) is equal to
  - D) cannot be compared to
  - E) can be compared but more information is needed to determine whether the slope is greater than, less than, or equal to

## 1.6 Essay: Definition and Questions

- 1) What is the relationship between wants, resources, scarcity, and choices? Discuss the relationship for an individual and for a society.

Answer: A person faces scarcity whenever his or her wants exceed what he or she can obtain using his or her resources. Because the person cannot fulfill all of his or her wants, the person is forced to choose which wants will be satisfied and which wants will remain unsatisfied. The same results hold true for a society. All societies face scarcity because people's wants are essentially infinite, so that the resources available are not sufficient to fulfill everyone's wants. Because of this fact, societies must make choices about which (and whose) wants will be satisfied and which (and whose) wants will remain unsatisfied.

Topic: Scarcity

Skill: Level 2: Using definitions

Section: Checkpoint 1.1

Status: Old

AACSB: Written and oral communication

2) Why do economists say that even very rich people face scarcity?

Answer: A person faces scarcity whenever his or her wants exceed what he or she can obtain using his or her resources. Even very rich people want things that they cannot have. An older rich person, for instance, might want to have all of his or her youthful energy, but medical science cannot (yet) provide this service. Alternatively, another rich person might enjoy life so much that he or she wants 25 hours in a day in order to have more time for more enjoyment. But, such a want is impossible. By way of another, perhaps more realistic example, Malcolm Forbes was the founder of Forbes magazine and was very rich. However, he did not win every piece of art that he bid upon at auctions. Even though Mr. Forbes was very rich, he still passed on some art when the price got so high that he thought given his resources, the price exceeded what he was willing to pay. Mr. Forbes wanted the art, but he was not willing to bid higher in order to win it. Mr. Forbes faced scarcity.

*Skill: Level 3: Using models*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

3) What do economists mean when they discuss "scarcity"?

Answer: Scarcity occurs whenever people's wants exceed the ability of the available resources to meet these wants. Because people's wants are effectively infinite—it is always possible to imagine more good things to want to have—wants will always exceed what can be produced with the available resources, and so scarcity will always be present.

*Topic: Scarcity*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

4) Define economics and describe its branches of study.

Answer: Economics is the social science that studies the choices made by individuals, businesses, government, and entire societies as they cope with scarcity. It has two branches, microeconomics and macroeconomics. Microeconomics is the study of the choices made by individuals and businesses, the way they interact, and the influence that governments exert on these choices. Macroeconomics is the study of the aggregate (total) effects on the national economy and the global economy of the choices that individuals, businesses, and governments make.

*Topic: Definition of economics*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

5) Why does scarcity lead to the what, how, and for whom questions?

Answer: Human wants exceed the resources available to satisfy them, thereby creating the problem of scarcity of goods and services. Everyone wants more than he or she can have, be it a student dreaming of a faster computer or an extraordinarily rich business leader wishing for more vacation time. Because not all wants can be satisfied, people must make choices about which wants to satisfy. The choices resulting from scarcity mean that people must decide what gets produced, how are the products produced, and for whom are the products produced.

*Topic: Scarcity and economic questions*

*Skill: Level 1: Definition*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

6) List and explain the three fundamental economic questions that must be answered by all economic systems.

Answer: First, all economic systems must answer the question of "what goods and services get produced and in what quantities?" In other words, among the near infinite types of goods and services, society must decide what will be produced and how much of each good and service will be produced. Next, every economic system must decide, "how are goods and services produced?" This question needs to be answered because there are always many ways to produce a particular good or service (for instance, using a lot of workers and only a little machinery, or a lot of machinery and fewer workers), so the method that will be used must be decided. Finally, once the goods and services are produced the society must decide "for whom are the various goods and services produced?" In other words, societies must decide whether the goods and services are distributed so that everyone gets about the same amount or whether they are distributed so that some people get more than others.

*Topic: Economic questions*

*Skill: Level 1: Definition*

*Section: Checkpoint 1.1*

*AACSB: Reflective thinking*

- 8) Different nations answer the what, how, and for whom questions differently. China, for instance, builds dams using many workers and only a little capital equipment. The United States builds dams using a few workers and a lot of capital equipment. Which economic question are these two nations answering and why do the answers differ?

Answer: The nations are answering the "how" question because they are determining how to produce a dam. In the main part, the answers differ because the nations have different amounts of capital equipment and labor. China has more people and less capital equipment. Hence it makes sense for China to build dams using many workers and only a little capital equipment. The U.S. has more capital equipment and less labor. Thus it makes sense for the United States to build dams using a lot of capital equipment and only a few workers.

*Topic: Economic questions, how*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

- 9) The question "Will doctors or lawyers have higher annual incomes?" represents which of the three basic economic questions?

Answer: The amount of goods and services a person can purchase depends on the person's income. Hence the question of who should be paid more, lawyers or doctors, essentially asks whether lawyers or doctors will be able to buy more goods and services. Thus the question is a microeconomic "For whom?" question.

*Topic: Economic questions, for whom*

*Skill: Level 3: Using models*

*Section: Checkpoint 1.1*

*Status: Old*

*AACSB: Written and oral communication*

## 1.7 Essay: The Economic Way of Thinking

- 1) What is the difference between microeconomics and macroeconomics?

Answer: Microeconomics studies the decisions of smaller economic actors, such as individual consumers or individual firms, and how the government can affect these decisions, say through how it regulates an industry. Macroeconomics studies the aggregate, or economy-wide, consequences of the decisions made by individuals and firms. Macroeconomics also studies the aggregate effects of government policies, such as the Federal Reserve's decisions to raise or lower interest rates.

*Topic: Microeconomics and macroeconomics*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

2) What is an opportunity cost? Give an example.

Answer: An opportunity cost of something is the best thing you must give up to get it. For example, the cost of attending class might be the extra hour of sleep you lose, or the opportunity cost of buying a taco might be the soda you can no longer buy.

*Topic: Opportunity cost*

*Skill: Level 1: Definition*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

3) Your friend is preparing for this exam and in your practice session makes the following statement: "Instead of attending microeconomics class for two hours, Kiki could have played tennis or watched a movie. Therefore, the opportunity cost of attending class is the tennis and the movie she had to give up." Is your friend's analysis correct or not? Explain your answer.

Answer: Your friend's analysis is incorrect. The opportunity cost of an action is the (single) best thing she had to give up, not *all* the things she had to give up. Kiki's opportunity cost of studying for her exam is either the tennis or the movie, whichever she would have done had she not studied.

*Topic: Opportunity cost*

*Skill: Level 3: Using models*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

4) Rather than go out to eat by yourself, you decide to stay at home and fix dinner for yourself and your two roommates. Your roommates applaud your decision. Your roommates tell you that your decision to eat at home has no opportunity cost because you already have all the dinner ingredients in your pantry. Is this comment correct?

Answer: Your roommates' comment is incorrect. The opportunity cost of preparing dinner at home is whatever is the best thing you give up, which, given your choice boiled down to staying home or going out, is going out to eat. Hence the opportunity cost of fixing dinner at home is going out to eat.

*Topic: Opportunity cost*

*Skill: Level 3: Using models*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 5) Shaniq can spend the next hour studying for a finance test, hiking along the Oregon coast, watching reruns of *Lost* on television, or napping. If she decides to study, what is the opportunity cost of her choice: hiking, watching television, or napping?

Answer: With the information given, it is impossible to determine the opportunity cost. The opportunity cost is the highest-valued alternative forgone and the problem does not give Shaniq's ranking of the options. For instance, if Shaniq thinks that if she had not studied she would have watched *Lost*, then watching *Lost* is the opportunity cost. However, if Shaniq thinks that if she were not studying, she would be strolling along the beach, then the beach walk is the opportunity cost.

Topic: Opportunity cost

AACSB: Written and oral communication

- 6) For spring break, Melanie will either stay home or go to Daytona Beach. At home, Melanie pays \$10 per day for food and earns \$90 a day at her job. At Daytona Beach, Melanie will stay with friends and so has no lodging cost. She will pay \$20 per day for food. In terms of dollars, Melanie's opportunity cost per day of going to Daytona Beach is how much?

Answer: Melanie's opportunity cost of going to Daytona Beach is \$100 per day. If she goes, she spends \$10 extra for food and loses \$90 income from her job, for a total opportunity cost of \$100.

Topic: Opportunity cost

Skill: Level 3: Using models

Status: Old

AACSB: Reflective thinking

- 7) Why is the benefit of something measured by what you are willing to give up?

Answer: The benefit of a good or service, say a slice of pizza, is the pleasure it brings the consumer. But it is impossible to measure someone's pleasure. In order to measure the benefit of the slice of pizza, we need something that we can measure. Thus, to measure the benefit of the slice of pizza, we ask the consumer what he or she is willing to give up to get the slice of pizza. So, if the consumer was willing to give up, say, three hot dogs to get the slice of pizza, we can determine that the benefit of the slice of pizza to the consumer is three hot dogs.

Status: Old

AACSB: Reflective thinking

- 9) In New State, the bottling law requires that people get a refund of five cents when they return an empty bottle or can. Why does the state pay people to return bottles? In your answer, be sure to mention the role played by rational choice.

Answer: Policy makers know that people making rational choices respond to incentives. Instead of throwing away bottles and cans, people will now bring the used bottles and cans to the designated areas for recycling in order to receive their payment. Thus policy makers have taken advantage of people's rational decision making in order to reduce litter and clean the environment.

*Topic: Incentives*

*Skill: Level 3: Using models*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 10) Must a rational choice always work out well? In other words, is it possible for someone to regret a rational decision?

Answer: It is not necessarily the case that a rational choice always works out well; sometimes people will come to regret a rational decision. Decisions are made based on the information at hand. Sometimes that information is incomplete. For instance, when faced with a math midterm on Thursday, on Wednesday night a student might believe that he or she has a strong grasp of the subject and hence rationally decide to go to a movie rather than study. When the test reveals that the student actually understood little about the math and the student earns a low score, he or she likely regrets not studying. But the regret does not imply that the decision to see the movie was irrational.

*Topic: Making rational choices*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 11) Discuss what is necessary to make rational decisions. Be sure to mention opportunity cost, marginal cost, and marginal benefit.

Answer: Economists assume that people act rationally, making choices in increments and comparing marginal costs and benefits. Costs are measured as opportunity cost, which is the value of the best thing that must be given up. Benefits are subjective, measured by what you are willing to give up. Marginal cost is the additional cost of one more unit of the good and marginal benefit is the additional benefit of one more unit. Marginal cost increases and marginal benefit decreases as more of the activity is considered. A rational decision compares the marginal benefit of the decision to its marginal cost. If the marginal benefit exceeds the marginal cost, the (rational) decision is to undertake the action being contemplated. If the marginal benefit is less than the marginal cost, the (rational) decision is to not undertake the action being considered.

*Topic: Making rational choices*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*AACSB: Written and oral communication*

12) What is a positive statement? Give an example.

Answer: A positive statement addresses "what is" and can be tested. An example of a positive statement is "An increase in the price of gasoline decreases the quantity of gasoline demanded."

*Topic: Positive statements*

*Skill: Level 1: Definition*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Reflective thinking*

13) What is the difference between positive and normative statements?

Answer: Positive statements tell what is and normative statements tell what ought to be. Positive statements can be tested to determine if they are correct or not, while normative statements use value judgments and so cannot be tested. For example, two economists might agree on the positive assertion that if the government spent its funds purchasing pharmaceutical drugs for poor older Americans rather than poor children, then poor older Americans would use more drugs and poor children would use fewer. But they might disagree on the normative conclusion of whether the government should pursue this policy. One economist might argue "It is not fair to have senior citizens suffer because they cannot afford medicine" and the other economist might argue "It is not fair to have children suffer because their parents cannot afford medicine."

*Topic: Positive and normative statements*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

14) Two economists can agree that raising the minimum wage creates unemployment yet one might argue that raising the minimum wage is a good policy and the other that it is a bad policy. Why can this difference exist? Be sure to use the terms positive and normative in your answer.

Answer: Positive statements are statements that describe how the world is. Positive statements can be tested and so, ultimately, any disagreements about positive statements should be resolved. The statement that "Raising the minimum wage creates unemployment" is a positive statement and, on the basis of repeated testing, most economists agree that it is a correct positive statement. Normative statements, however, are statements that describe how the world ought to be. Normative statements depend on people's values and cannot be tested. So one economist might argue that raising the minimum wage is a good policy because this economist thinks that, although it is unfortunate that some people lose their jobs, the fact that others retain their jobs and their wages rise more than outweighs the harm created by the unemployment. Another economist might strongly differ because the second economist thinks that the harm inflicted on people who lose their jobs more than outweighs any good from some workers being paid more. This difference of opinion can last indefinitely because there is no way to test the two economists' beliefs to determine which is correct.

*Topic: Positive and normative statements*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 15) Explain whether the statement, "There is life on Mars," is a normative or positive statement.

Answer: The statement is a positive statement because it does not depend on a value judgment. Instead, it is a statement that tries to describe "what is" and hence is testable. Of course, in order to test the assertion, it would be necessary to go to Mars to ascertain if there is life present. While it is difficult (!) at present to actually carry out the test, nonetheless the statement is testable and hence is a positive statement.

*Topic: Positive statements*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 16) Explain whether the statement, "Hillary Clinton was elected President of the United States in 2008," is a normative or positive statement.

Answer: The statement is a positive statement because it does not depend on a value judgment. Instead, it is a statement that tries to describe "what is" and hence is testable. Now, it is indeed the case that Hillary Clinton was not elected president in 2008, so when we test the statement we discover that it is incorrect. But, whether the statement is correct or not has no bearing on whether the statement is positive or normative. Thus, the statement "Hillary Clinton was elected President in 2008" is a positive, albeit incorrect, statement.

*Topic: Positive statements*

*Skill: Level 3: Using models*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Written and oral communication*

- 17) What is a normative statement? Give an example.

Answer: A normative statement is a statement about what ought to be. It is a value judgment or opinion and so cannot be proven true or false. An example of a normative statement is "Students should attend school year round to receive a better education."

*Topic: Normative statements*

*Skill: Level 1: Definition*

*Section: Checkpoint 1.2*

*Status: Old*

*AACSB: Reflective thinking*

- 18) Explain whether the statement "The government should increase tariffs on Japanese cars to protect the American car industry from competition," is a normative or positive statement.

Answer: The statement is normative. The statement is a normative statement because it depends on a value judgment, namely that the government should protect the American car industry from competition.

*Topic: Normative statements*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 1.2*

## 1.8 Essay: Appendix: Making and Using Graphs

### 1) Why do economists use graphs?

Answer: Graphs help economists, and others, to visualize the relationships between economic variables. Graphs that plot variables together help economists understand if the variables are related and how they are related. Graphs also help provide a visual picture of economic models that link different variables. Indeed, many other disciplines use such visual models. For example, architects work with blueprints (their model) and the blueprints represent every detail of a building. Economists' models do not reflect of every detail of the real world, but the graphs that they use nonetheless are valuable because they help clarify the linkages between the variables.

*Topic: Basic idea*

*Skill: Level 2: Using definitions*

*Section: Chapter 1 Appendix – Checkpoint 1*

*Status: Old*

*AACSB: Analytical thinking*

### 2) What kind of information is conveyed in a time-series graph?

Answer: A time series graph reveals four types of information. First, it shows the actual value of the variable or variables at each point in time. Second, it shows whether the variable or variables are rising or falling as time passes. Third, it shows the speed with which the variable or variables are changing. Finally, it shows the presence or absence of a trend.

*Topic: Time-series graph*

AACSB: Analytical thinking

- 5) The figure above shows the price of a DVD player from 1996 to 2000.
- What type of graph is illustrated above?
  - What is the trend in the price of a DVD player?

Answer: a. The graph is a time-series graph because it plots time along the horizontal axis and the price of a DVD player along the vertical axis.

b. The trend in the price of a DVD player is negative, that is, the price of a DVD player has generally decreased from one year to the next.

*Topic: Time-series graph*

*Skill: Level 1: Definition*

*Section: Chapter 1 Appendix - Checkpoint 1*

*Status: Old*

*AACSB: Analytical thinking*

- 6) What are the two different types of relationships that variables can have? Explain each. What do these relationships look like when they are graphed?

Answer: Variables can have two relationships: positive (or direct) and negative (or inverse). A positive relationship occurs when the variables move in the same direction, so that when one increases, the other also increases. A negative relationship occurs when the variables move in the opposite direction, so that when one increases, the other decreases. When a positive relationship is graphed, the line slopes upward to the right. When a negative relationship is graphed, the line slopes downward to the right.

*Topic: Relationships*

*Skill: Level 1: Definition*

*Section: Chapter 1 Appendix - Checkpoint 2*

*Status: Old*

*AACSB: Analytical thinking*

7) What is the difference between a positive and a negative relationship?

Answer: Two variables are positively related when an increase (decrease) in one is associated with an increase (decrease) in the other. In this case, the variables move together, in the same direction. Two variables are negatively related when an increase (decrease) in one is associated with a decrease (increase) in the other. In this case, the variables move in the opposite direction.

Topic: Relationships

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

8) A graph of two variables is a vertical line. What is the interpretation of this result?

Answer: When the graph of two variables is a vertical line, the variables are not related because, with this graph, whenever the variable measured along the vertical axis changes, the variable measured along the horizontal axis does not change.

Topic: Unrelated variables

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

9) The figure above shows how the sales of the video game "Tomb Raider –Lara Retires" change when the advertising spent on the game changes. Is the relationship between advertising and the number of games sold positive, negative, or neither? Explain your answer.

Answer: The figure shows that there is a positive relationship between advertising and the number of video games sold. The relationship is positive because the two variables move together: If advertising increases, so, too, does the number of games sold.

Topic: Positive relationship

Skill: Level 2: Using definitions

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 10) The figure above shows how the relationship between the number of hours per week a high school student spends on the web and the student's SAT score. Is the relationship between hours on the web and the SAT score positive, negative, neither? Explain your answer.

Answer: The figure shows that there is a negative relationship between hours on the web and the student's SAT score. The relationship is negative because the two variables move in opposite directions: If hours on the web increase, the SAT score decreases.

*Topic: Negative relationship*

*Skill: Level 2: Using definitions*

*Section: Chapter 1 Appendix – Checkpoint 2*

*Status: Old*

*AACSB: Analytical thinking*

- 11) A graph has a point that is either a maximum or a minimum. To the left of the point, the slope of relationship is positive. To the right of the point, the slope is negative. Is the point a maximum point or a minimum point? Be sure to draw a figure that supports your answer.

Answer:

The point is a maximum point. Examine the figure above. The slope of a curved line at any point equals the slope of a straight line that touches the curved line at only that one point. Thus to the left of the maximum point, take point A. The slope of the straight line that touches the curved line at only point A is positive, so the slope of the relationship is positive. Similarly, take point B to the right of the maximum point. As the straight line shows, the slope of the relationship at point B is negative. Indeed, whenever there is a maximum point, the slope of the relationship to the left of the maximum is positive and the slope to the right is negative.

Topic: Maximum

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 2

Status: Old

AACSB: Analytical thinking

- 12) What does the slope of a straight line equal? How is the slope of a curved line calculated?

Answer: The slope of a straight line is calculated between two points on the line. Between the two points on the line, the slope equals the change in the value of the variable measured on the vertical axis (the  $y$ -axis) divided by the change in the value of the variable measured on the horizontal axis (the  $x$ -axis). The slope of a curved line is calculated at a point on the line. At that point on the curved line, draw a straight line that touches the curved line at only that point. Then, calculate the slope of the straight line. The slope of the curved line at that point equals the slope of the straight line.

Topic: Slope

Skill: Level 1: Definition

Section: Chapter 1 Appendix – Checkpoint 3

AACSB: Analytical thinking

13) In the figure above, what can you deduce about the slope of the curve?

Answer: The slope is positive and increasing in size as we move rightward along the curve.

Topic: *Slope*

Skill: *Level 2: Using definitions*

Section: *Chapter 1 Appendix – Checkpoint 3*

Status: *Old*

AACSB: *Analytical thinking*

Katie's Income (dollars per year)	Katie's purchases (books per year)
50,000	14
70,000	16
90,000	18
110,000	20

- 14) The table above shows how the number of books Katie buys each year depends on her income.
- What kind of relationship exists between Katie's income and the number of books she purchases?

- Plot the relationship between Katie's income and the number of books she purchases in the above figure. Measure income along the vertical axis and the number of books along the horizontal axis. Be sure to label the axes.
- What is the slope of the relationship between \$50,000 and \$70,000 of income?
- What is the slope of the relationship between \$90,000 and \$110,000 of income?
- Comment on the similarity or dissimilarity of your answers to parts (c) and (d).

Answer: a. There is a positive relationship. When Katie's income increases, so too does her purchase of books.

- b. The relationship is plotted in the figure above.
- c. The slope equals the change in the value of the variable measured on the vertical axis, income, divided by the change in the value of the variable measured along the horizontal axis, the number of books. Between \$50,000 and \$70,000 of income, the number of books purchased increases from 14 to 16. Hence income increases by \$20,000 and the number of books increases by 2, so the slope equals  $\$20,000/2 = 10,000$ .
- d. As with the previous answer, the slope equals the change in income divided by the change in books. Between \$90,000 and \$110,000 of income, the number of books purchased increases from 18 to 20. Hence income increases by \$20,000 and the number of books increases by 2, so the slope equals  $\$20,000/2 = 10,000$ .
- e. The slopes in parts (c) and (d) are equal. But, they *must* be equal because the relationship between Katie's income and the number of books she purchases is linear. For a linear relationship, the slope is the same regardless of where it is measured.

$X$	$Y$
2	20
4	16
6	12
8	8

15) Graph the data in the table above in the figure. Label the axes.

- Is the relationship between  $X$  and  $Y$  positive or negative?
- What is the slope when  $X = 4$ ?
- What is the slope when  $X = 8$ ?

Answer:

The figure labels the axes and graphs the relationship.

- The relationship between  $X$  and  $Y$  is negative.
- The slope equals  $-2$ .
- The slope equals  $-2$ .

*Skill: Level 2: Using definitions*

*Section: Chapter 1 Appendix – Checkpoint 3*

*Status: Old*

*AACSB: Analytical thinking*

17) What does the slope of the line shown in the above figure equal?

Answer: The slope equals the change in variable on the  $y$ -axis divided by the change in the variable on the  $x$ -axis, or  $(150 - 300)/(600 - 800) = 0.75$ .

Topic: Slope of a straight line

Skill: Level 3: Using models

Section: Chapter 1 Appendix - Checkpoint 3

Status: Old

AACSB: Analytical thinking

18) What does the slope of the line shown in the above figure equal?

Answer: The slope equals the change in variable on the  $y$ -axis divided by the change in the variable on the  $x$ -axis, or  $(18 - 27)/(10 - 20) = 0.90$ .

Topic: *Slope of a straight line*

Skill: *Level 3: Using models*

Section: *Chapter 1 Appendix - Checkpoint 3*

Status: *Old*

AACSB: *Analytical thinking*

19) What does the slope of the line shown in the above figure equal?

Answer: The slope equals the change in variable on the  $y$ -axis divided by the change in the variable on the  $x$ -axis, or  $(30 - 60)/(25 - 15) = -3.0$ .

Topic: Slope of a straight line

Skill: Level 3: Using models

Section: Chapter 1 Appendix - Checkpoint 3

Status: Old

AACSB: Analytical thinking

20) What does the slope of the line shown in the above figure equal?

Answer: The slope equals the change in variable on the  $y$ -axis divided by the change in the variable on the  $x$ -axis, or  $(5 - 10)/(60 - 100) = 0.125$ .

Topic: Slope of a straight line

Skill: Level 3: Using models

Section: Chapter 1 Appendix - Checkpoint 3

Status: Old

AACSB: Analytical thinking

21) What does the slope of the curved line at point A shown in the above figure equal?

Answer: The slope of a curved line equals the slope of a straight line that touches the curved line at only that point. And, the slope of a straight line equals the change in variable on the  $y$ -axis divided by the change in the variable on the  $x$ -axis. Measure the slope of the straight line from point A to where the line crosses the  $x$ -axis, at 15. Thus the straight line has a slope of  $(30 - 0)/(10 - 15) = -6$ . Therefore the curve line at point A also has a slope equal to  $-6$ .

AACSB: Analytical thinking

22) "It is impossible to represent a three variable relationship in a two-dimensional graph." Is this statement true or false? Explain your answer.

Answer: The statement is false because it is possible to represent a three variable relationship in a two dimensional graph. To do so, start by focusing on two of the variables. Assume that the third variable does not change (the *ceteris paribus* assumption) and then graph the relationship between the two variables. The graph shows how these two variables are related when the third variable does not change. When the third variable does change, then the entire relationship between the two graphed variables changes. In other words, the line showing the relationship between the two graphed variables shifts so that it becomes an entirely new line. The shift in the line shows how the third variable influences the other two.

Hours studied (per week)	SAT Scores
2	900
4	1000
6	1050
8	1075
10	1090

23) Jamie is preparing to take his SAT tests. The table above shows how Jamie's score depends on the number of hours a week Jamie studies

- a. Plot the relationship in the figure, putting the hours studied on the horizontal axis.

- b. Is the relationship you plotted positive or negative?  
c. What happens to the slope of the relationship as hours studied increase?  
d. Suppose Jamie can enroll in an SAT prep course and, by so doing, for every possible number of hours he studies, his score will be 100 points higher. Plot the new relationship between the number of hours studied and Jamie's SAT score in the figure.  
e. How many variables are involved in the figure you just completed?

Answer:

- a. The figure above plots the relationship between the number of hours Jamie studies

and his SAT score.

- b. The relationship is positive: As Jamie increases the hours he studies, his SAT score increases.
- c. The relationship is nonlinear, so the slope of the relationship changes as the number of hours studied changes. In the figure, the slope of the relationship decreases in size as the number of hours studied increases.
- d. The figure above also plots the relationship between the hours Jamie studies and his SAT score if Jamie takes an SAT preparation course.
- e. There are three variables: The number of hours Jamie studies, whether or not he takes an SAT preparation course, and his SAT score.

## 2.5 Chapter Figures

The figure above shows the circular flow model.

- 1) In the figure above, which of the following represents a real flow of a factor of production?
- A) labor
  - B) wages
  - C) goods bought
  - D) services sold
  - E) firms' expenditures on factors of production

Answer: A

## 2.6 Essay: What, How, and For Whom?

- 1) It is conventional to divide the nation's total production into four categories. Name and explain the four categories. In the United States, which category accounts for the largest share and the smallest share of the nation's total production?

Answer: The four categories of production are consumption goods and services, capital goods, government goods and services, and export goods and services. The division is based upon who purchases the goods and services. For instance, consumption goods and services are purchased by individuals for their own enjoyment whereas export goods and services are purchased by foreigners. In the United States, the largest of these four components is consumption goods and services. In 2011, consumption goods and services accounted for 61 percent of the total production. The smallest components were capital goods and export goods and services, which each accounted for 11 percent of the total production.

*Topic: What we produce*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Written and oral communication*

- 2) Explain the difference between consumption and capital goods.

Answer: A difference lies in the identity of the purchaser. Consumption goods (and services) are purchased by households and investment goods are purchased by firms. Households buy consumption goods to use for personal enjoyment. They contribute to the person's standard of living. Firms buy capital goods to use as a factor of production. Capital goods are used along with the other factors of production, to help produce additional goods and services.

*Topic: Consumption and capital goods*

*Skill: Level 3: Using models*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Written and oral communication*

- 3) Identify the four factors of production, and tell what type of income is earned by each factor.

Answer: The factors of production are land, which represents all the gifts of nature; labor, the work effort people put into producing goods and service; capital, goods that have been produced and are used as a productive resource to help produce other goods and services; and entrepreneurship, the human resource that organizes all the other factors of production. Land earns rent, labor earns wages, capital earns interest, and entrepreneurship earns profit or losses.

*Topic: Factors of production*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

4) What are the payments each factor of production receives?

Answer: Rent is paid for the use of land. Wages are paid for the services of labor. Interest is paid for the use of productive capital. Entrepreneurs earn a profit.

*Topic: Factors of production*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

5) What is meant by the term "human capital"?

Answer: Human capital refers to the skills people possess. These skills help increase the quality of labor. Human capital can be increased through education, on the job training, and experience. The knowledge and skill gained from these improvements are called human capital.

*Topic: Human capital*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

6) What effect, if any, will a good college education have on your human capital? Explain your answer.

Answer: Human capital refers to the skills people possess. These skills can be gained through education, on the job training, and experience. Thus your college education is increasing your human capital.

*Topic: Human capital*

*Skill: Level 3: Using models*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

7) Explain the differences between "human capital," "financial capital," and "capital."

Answer: Human capital is the knowledge and skills people obtain from education, on-the-job training, and work experience. Financial capital is money, stocks, and bonds. Capital is tools, instruments, machines, buildings, and anything that had to be produced prior to production of the desired goods and services.

*Topic: Capital*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

- 8) What is the difference between "capital" and "financial capital"? Which is a factor of production?

Answer: "Capital" is the actual physical good, such as a factory, an assembly line, or a computer server. "Financial capital" is stocks, bonds, or money. Financial capital is used to fund the purchase of the (physical) capital. Financial capital is NOT a factor of production because it is not used to help produce goods and services. Capital, however, is a factor of production because capital is used to help produce goods and services.

*Topic: Capital*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

- 9) What is the difference between the functional and the personal distribution of income?

Answer: The functional distribution of income shows how total income is divided among the factors of production. The personal distribution of income shows how total income is divided among households.

*Topic: Distributions of income*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

- 10) In the United States, which factor of production earns the largest share of the nation's total income?

Answer: The largest fraction of the nation's total income is earned by labor. In the United States, wages paid to labor account for about 69 percent of the nation's total income.

*Topic: Functional distribution of income*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

- 11) In the United States, how does the income received by the richest 20 percent of individuals compare with the income received by the other 80 percent?

Answer: In the United States, the richest 20 percent of individuals receive about 51 percent of the nation's total income. Thus the other 80 percent of individuals receive the remainder, about 49 percent of the nation's income. So the richest 20 percent of the individuals receive almost the same amount as the other 80 percent of people.

*Topic: Personal distribution of income*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.1*

*Status: Old*

*AACSB: Reflective thinking*

## 2.7 Essay: The Global Economy

- 1) Compare and contrast the world population with that of the United States. Is the United States becoming a larger or a smaller part of the world's population?

Answer: The U.S. population was approximately 311 million in 2011. It is growing at a rate of about one person in every 12 seconds. The world population in 2011 was about 7 billion and is growing at a rate of 30 people in the same 12 seconds. Hence the United States is becoming a smaller fraction of the world's population.

*Topic: Population*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 2.2*

*Status: Old*

*AACSB: Reflective thinking*

- 2) How many and what fraction of the world's people live in advanced economies? In emerging market and developing economies?

Answer: There are approximately 7 billion people in the world. Of the 7 billion people, almost 1 billion or 15 percent, live in advanced economies. About 85 percent, or nearly 5.8 billion people live in emerging market and developing economies.

*Topic: Population*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.2*

*Status: Old*

*AACSB: Reflective thinking*

- 3) The International Monetary Fund divides nations into three groups. What are the three groups and what are the characteristics of each group?

Answer: The International Monetary Fund divides nations into "advanced economies," "developing economies," and "emerging market economies." Advanced economies are the countries or regions that have the highest living standards. Industrialized nations such as the United States, Canada, and Japan are included, as are the newly industrialized Asian economies. Developing economies are the countries that have yet to achieve a high standard of living. Nations in Africa, Central America, and South America fall into this category. The emerging market economies are nations that are changing how they organize their economies. In the past, their economic system relied upon state-ownership of capital and direct government management of the economy. They now are moving to more reliance upon a system of free enterprise, that is, a system similar to what exists in the United States. Emerging market economies are Russia and the other nations in Eastern and Central Europe that used to be Russian satellites.

*Topic: Classification of countries*

*Skill: Level 3: Using models*

*Section: Checkpoint 2.2*

*Status: Old*

*AACSB: Written and oral communication*

- 4) Discuss the distribution of income around the world. Which countries have the highest average incomes? Which countries have the lowest average incomes? How has the distribution of income changed in recent years?

Answer: Income is distributed unequally, with residents in the advanced economies having the highest average incomes. The highest living standard is in the United States, where the average income is \$129 per day. Canada, Japan, the United Kingdom, and the Euro zone are close behind. In the poorest regions of the world, India and Africa, incomes are much lower. The average income is only \$3 per day in India. The distribution of world income has become more equal in recent years because income in some very poor nations, especially China, has grown rapidly.

*Topic: Distributions of income*

*Skill: Level 3: Using models*

*Section: Checkpoint 2.2*

*Status: Old*

*AACSB: Written and oral communication*

- 5) Discuss the differences between developing and emerging market economies.

Answer: Although the average income in emerging market economies is less than that in advanced economies, developing countries generally have lower levels of income than emerging market economies. Emerging market economies are in some ways as developed as the advanced economies because they often have a well-trained labor force and a reasonable capital stock, both of which are typically missing in developing economies. But emerging market economies are struggling to raise their living standards. The main difference between emerging market economies and other economies is their economic system. Emerging market economies operated under state-owned production for many years and are now moving towards a free market system. Developing economies generally do not have the same history of a very long period of time operating under a system of state-owned production.

*Topic: Developing and emerging market economies*

*Skill: Level 5: Critical thinking*

*Section: Checkpoint 2.2*

*Status: Old*

*AACSB: Written and oral communication*

## 2.8 Essay: The Circular Flows

- 1) What is a market? Must a market have a single physical location?

Answer: A market is any arrangement that allows buyers and sellers to get together and transact their business. Although some markets have a physical location, such as a farmers' market where buyers and sellers of fresh corn can meet face-to-face, markets do not require an actual location. Indeed, many markets, such as the local market for apartments, do not have a single physical location. Nonetheless, buyers and sellers (tenants and landlords) arrange purchases and sales (the rental of apartments and houses) through means other than meeting in one central location.

*Topic: Markets*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Written and oral communication*

2) Explain the structure of the circular flow model.

Answer: Households own the factors of production and sell the services from them to firms in the factor market. Income earned by households in the factor market is used to purchase goods and services from firms in the goods market. And the revenue the firms gain by selling the goods and services in the goods market is used to pay for the services of the factors of production they hire in the factor markets.

*Topic: Circular flow model*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Written and oral communication*

3) How are the roles of the household different in the goods market and in the factor markets?

Answer: In the goods market, households are buyers. They purchase the goods and services produced by the firms. In exchange for the goods and services, households pay firms. In the factor market, households are sellers. They provide the services from land, labor, capital, and entrepreneurship to the firms. In the factor markets, households receive payments from firms.

*Topic: Circular flow model*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Written and oral communication*

4) Describe the circular flow of the economy by discussing the two markets where households and firms meet.

Answer: Firms and households meet in two markets: the goods market and the factors market. In the goods markets, households buy the goods and services that firms sell. In this market, households give firms money in exchange for the goods and services. In the factors market, households sell the services of the factors of production to firms, which buy the services of these factors. In the factors market, firms pay households money in exchange for the productive resources. Hence households earn their incomes in the factors market and spend their incomes in the goods market. And firms earn their revenue in the goods market and pay their costs in the factors market.

*Topic: Circular flow model*

*Skill: Level 3: Using models*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Written and oral communication*

5) Explain how public goods provided by the federal government differ from public goods provided by the state and local governments.

Answer: The federal government provides goods and services such as national defense and the legal system. These are goods and services that benefit the entire nation or else substantial parts of it. The state and local governments provide mainly education and highways, which benefit primarily residents within the state or locality.

*Topic: Functions of state and local governments*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Written and oral communication*

6) Describe the government's flows in the circular flow model of the economy.

Answer: The government has several flows in the circular flow model. First, the government taxes households and firms. Hence, funds flow from households and firms to the government. Second, the government transfers income back to households, via payments such as social security. In this case, funds flow from the government to households. The government also purchases goods and services from firms in the goods market. In this case, goods and services flow to the government and payments flow to firms.

*Topic: Circular flow and the government*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 2.3*

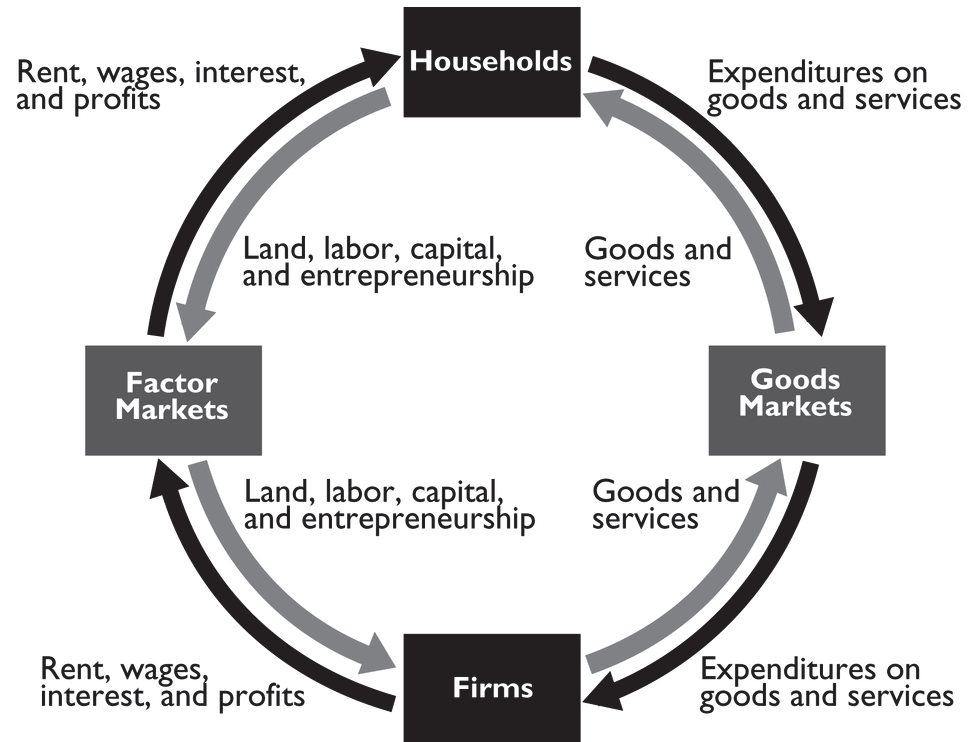

*Status: Old*

*AACSB: Written and oral communication*

7) Label the flows in the simplified circular flow diagram that ignores the government.

Answer:

The figure above shows the labeled flows.

Status: Old

AACSB: Reflective thinking

- 8) Draw a circular flow diagram with households and firms and without government. Label the markets and the flows in the circular flow diagram.

Answer:

A circular flow diagram with the markets and flows labeled is in the figure above.

Topic: Circular flow model

Skill: Level 3: Using models

Section: Checkpoint 2.3

Status: Old

AACSB: Reflective thinking

- 9) Explain how the largest sources of state tax revenues differs from the largest sources of federal tax revenues.

Answer: The two largest sources of federal tax revenues are from the personal income tax and Social Security taxes. Most state tax revenues are from sales and property taxes. There are no federal property or sales taxes. There is no state social security tax. And, although there are state income taxes, they do not take in as much revenue as do other state taxes.

Topic: Tax receipts

Skill: Level 1: Definition

Section: Checkpoint 2.3

Status: Old

AACSB: Reflective thinking

10) What are the two largest sources of tax revenues for the U.S. federal government?

Answer: The largest source of tax revenue for the U.S. federal government is personal income taxes, that is, the income taxes that individuals pay. The second largest source of revenue is social security taxes. Personal income taxes account for about 41 percent of the federal government's revenue and social security taxes account for about 40 percent, so together these two sources of revenue are 81 percent of the federal government's total tax revenues.

*Topic: Federal government*

*Skill: Level 1: Definition*

*Section: Checkpoint 2.3*

*Status: Old*

*AACSB: Reflective thinking*

11) What is the largest source of tax revenue for the U.S. federal government and what is the largest expenditure item of the U.S. federal government?

Answer: The largest source of tax revenue for the U.S. federal government is personal income taxes, that is, the income taxes that individuals pay. The largest expenditure of the U.S. federal government is spending on Medicare and Medicaid.

*Topic: Federal government*

*Skill: Level 1: Definition*

- 17) In a production possibilities frontier diagram, the attainable production points are shown as
- A) only the points on the production possibilities frontier.
  - B) only the points beyond the production possibilities frontier.
  - C) only the points inside the production possibilities frontier.
  - D) the points inside and the points on the production possibilities frontier.
  - E) any of the production points.

Answer: D

Topic: Attainable points

Skill: Level 1: Definition

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

- 18) In the production possibilities frontier model, an unattainable point lies
- A) only on the production possibilities frontier itself.
  - B) only inside the production possibilities frontier.
  - C) only outside the production possibilities frontier.
  - D) both on and outside the production possibilities frontier.
  - E) There are no unattainable points in the production possibilities model.

Answer: C

Topic: Unattainable points

Skill: Level 3: Using models

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

- 19) Production efficiency is represented by \_\_\_\_\_ a production possibilities frontier.
- A) all points on
  - B) all points inside
  - C) all points outside
  - D) a movement along
  - E) only one point on

Answer: A

Topic: Production efficiency

Skill: Level 2: Using definitions

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

20) If an economy cannot produce more of one good without producing less of another good, this implies that which of the following has been achieved?

- A) allocative efficiency
- B) minimum marginal cost
- C) *PPF* efficiency
- D) production efficiency
- E) maximum marginal benefit

Answer: D

Topic: *Production efficiency*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 3.1*

Status: *Old*

AACSB: *Reflective thinking*

21) Production efficiency occurs

- A) anywhere inside or on the production possibilities frontier.
- B) when the total cost of production is minimized.
- C) at all points on the production possibilities frontier.
- D) at only one point on the production possibilities frontier.
- E) at all points inside the production possibilities frontier.

Answer: C

Topic: *Production efficiency*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 3.1*

Status: *Old*

AACSB: *Reflective thinking*

22) When production efficiency does NOT occur,

- i. an economy is producing at a point within its *PPF*.
- ii. there are unemployed resources.
- iii. allocative efficiency cannot occur.

- A) i only
- B) i and ii
- C) iii only
- D) i and iii
- E) i, ii, and iii

Answer: E

Topic: *Production efficiency*

Skill: *Level 3: Using models*

Section: *Checkpoint 3.1*

Status: *Old*

AACSB: *Reflective thinking*

- 23) If there is unemployment in an economy, then the
- A) production possibilities frontier will shift inwards.
  - B) economy is operating at an unattainable point.
  - C) production possibilities frontier will shift outwards.
  - D) economy is producing at a point inside the production possibilities frontier.
  - E) production possibilities frontier must be bowed inward.

Answer: D

Topic: Attainable points, unemployment

Skill: Level 1: Definition

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

- 24) If a society moves from a period of time with significant unemployment to a time with full employment, its production possibilities frontier will
- A) shift leftward.
  - B) shift rightward.
  - C) not shift because the society moves from one point on the frontier to a point inside the frontier.
  - D) not shift because the society moves from a point inside the frontier to a point on the frontier.
  - E) not shift because the society moves from one point on the frontier to a point outside the frontier.

Answer: D

Topic: Attainable points, unemployment

Skill: Level 3: Using models

Section: Checkpoint 3.1

Status: Old

AACSB: Analytical thinking

- 25) Suppose that an economy is currently producing at a point that lies inside of its production possibilities set. Which of the following would best explain this circumstance?
- A) The economy does not have enough resources to produce at a point closer to the frontier of the production possibilities set.
  - B) The prevailing level of technology prevents the economy from producing at a point closer to the frontier of the production possibilities set.
  - C) The economy is experiencing a high level of unemployment.
  - D) Any of the above statements could explain this situation.
  - E) None of the above statements could explain this situation.

Answer: C

Topic: Attainable points, unemployment

Skill: Level 3: Using models

Section: Checkpoint 3.1

Status: New

AACSB: Analytical thinking

26) Which of the following statements is correct?

- A) An increase in productivity moves the economy from inside the production possibilities frontier to the frontier itself.
- B) An increase in productivity shifts the economy from producing at a point on the production possibilities frontier to a point outside the production possibilities frontier.
- C) An increase in unemployment shifts the economy further inside its production possibilities frontier.
- D) An increase in unemployment shifts the economy from a point outside the production possibilities frontier back to the production possibilities frontier.
- E) A reduction in unemployment shifts the entire production possibilities frontier outward.

Answer: C

Topic: Attainable points, unemployment

Skill: Level 3: Using models

Section: Checkpoint 3.1

Status: New

AACSB: Analytical thinking

27) A point on the production possibilities frontier reflects an

- A) attainable point with full employment of all resources.
- B) attainable point without full employment of all resources.
- C) unattainable point with full employment of all resources.
- D) unattainable point without full employment of all resources.
- E) None of the above answers is correct.

Answer: A

Topic: Attainable points, full employment

Skill: Level 2: Using definitions

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

28) Suppose a country operates on its production possibility frontier when it produces 1000 books and 1000 tables. The combination of \_\_\_\_\_ reflects \_\_\_\_\_

- A) 500 books and 1000 tables; an inefficient but attainable point.
- B) 1000 books and 500 tables; an efficient point.
- C) 1000 books and 1000 tables; a free lunch.
- D) 500 books and 500 tables; an attainable and efficient point.
- E) 1000 books and 1500 tables; a free lunch.

Answer: A

Topic: Attainable points, inefficiency

Skill: Level 3: Using models

Section: Checkpoint 3.1

Status: Old

AACSB: Analytical thinking

29) Consider a production possibility frontier with books and tables. A combination of 1000 books and 500 tables is on the frontier. Which of the following are true?

- i. Production of 700 books and 400 tables is attainable but inefficient.
- ii. Production of 1000 books and 600 tables is unattainable.
- iii. Production of 500 books and 1000 tables is inside the frontier.

- A) i and ii
- B) i, ii and iii
- C) i and iii
- D) ii and iii
- E) i only

Answer: A

Topic: Attainable points

Skill: Level 3: Using models

Possibility	Robots	Pizza
A	0	40
B	1	39
C	2	37
D	3	34
E	4	30
F	5	20
G	6	0

- 11) The table above shows a nation's production possibilities frontier. If the nation wants to produce 4 robots and 34 pizzas,
- A) it will shift the production possibilities frontier.
  - B) the opportunity cost is 9 pizzas.
  - C) the nation will be producing inefficiently.
  - D) it will be unable to do so because the production point is unattainable.
  - E) the nation will then be producing at a production efficient point.

Answer: D

Topic: Unattainable points

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 12) The table above shows a nation's production possibilities frontier. If the nation chooses to increase the production of robots from 2 to 3 and it is on its *PPF*, it will have to forgo \_\_\_\_\_ pizzas.
- A) 37
  - B) 34
  - C) 3
  - D) 35.5
  - E) None of the above answers is correct.

Answer: C

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 13) The table above shows a nation's production possibilities frontier. The opportunity cost of a robot between combination *D* and *E* is
- A) 4 pizzas.
  - B) 34 pizzas.
  - C) 30 pizzas.
  - D) 1/4 of a pizza.
  - E) undefined because neither point is production efficient.

Answer: A

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 14) The figure above shows the production possibilities frontier for a country. The opportunity cost of a gallon of milk between combination point *A* and *B* is
- A) 4 gallons of ice cream for a gallon of milk.
  - B) 3 gallons of ice cream for a gallon of milk.
  - C) 1 gallon of ice cream for a gallon of milk.
  - D)  $\frac{1}{3}$  of a gallon of ice cream for a gallon of milk.
  - E) zero because at point *A*, zero milk is being produced.

Answer: D

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 15) The figure above shows the production possibilities frontier for a country. If the economy is operating at point *B*, then the opportunity cost of another million gallons of milk is
- A) 4 gallons of ice cream for a gallon of milk.
  - B) 3 gallons of ice cream for a gallon of milk.
  - C) 1 gallon of ice cream for a gallon of milk.
  - D)  $\frac{1}{3}$  of a gallon of ice cream for a gallon of milk.
  - E) zero because after producing another million gallons of milk, then zero gallons of ice cream are produced.

Answer: B

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 16) The above figure shows the production possibility frontier for a country. Suppose the country is producing at point A. What is the opportunity cost of increasing the production of rice to 12 tons?

A) 15 thousand bottles of wine  
 B) 6 thousand bottles of wine  
 C) 9 thousand bottles of wine  
 D) 12 tons of rice  
 E) Nothing, it is a free lunch.

Answer: B

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

AACSB: Analytical thinking

24) The above figure shows the production possibility frontier for a country. What is the opportunity cost to move from point *D* to point *B*?

- A) 12 tons of rice
- B) 15 thousand bottles of wine
- C) 6 thousand bottles of wine
- D) 9 thousand bottles of wine
- E) Nothing, it is a free lunch.

Answer: A

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

25) Moving from a point inside the production possibilities frontier to a point on the production possibilities frontier, the opportunity cost of producing more of the good on the horizontal axis

- A) increases.
- B) decreases.
- C) is constant.
- D) is 0.
- E) is infinite.

Answer: D

Topic: Opportunity cost

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

26) Consider a production possibility frontier with jeans on the vertical axis and shoes on the horizontal axis. As a country moves along the frontier closer to the vertical axis,

- A) the opportunity cost of producing jeans increases.
- B) the opportunity cost of producing shoes increases.
- C) there are fewer tradeoffs.
- D) inefficient production occurs.
- E) the opportunity cost of producing jeans decreases.

Answer: A

Topic: Opportunity cost

Skill: Level 4: Applying models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

27) Suppose that in a *PPF* graph, wheat is on the vertical axis and jets are on the horizontal axis. Moving down along the *PPF*, the

- A) number of jets increases and the opportunity cost of jets increases.
- B) amount of wheat increases and the opportunity cost of wheat increases.
- C) number of jets increases and the opportunity cost of jets decreases.
- D) amount of wheat increases and opportunity cost of wheat decreases.
- E) opportunity cost of jets *and* wheat both increase.

Answer: A

Topic: *Opportunity cost*

Skill: *Level 4: Applying models*

Section: *Checkpoint 3.2*

Status: *Old*

AACSB: *Reflective thinking*

28) Why is a production possibilities frontier bowed out (concave)?

- A) The bowed shape reflects constant opportunity cost.
- B) The bowed shape reflects decreasing opportunity cost.
- C) The bowed shape indicates that opportunity cost at first decreases at a decreasing rate, and then begins to decrease at an increasing rate.
- D) The bowed shape indicates that opportunity cost at first increases at a decreasing rate, and then begins to increase at an increasing rate.
- E) The bowed shape reflects increasing opportunity cost.

Answer: E

Topic: *Increasing opportunity costs*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 3.2*

Status: *Old*

AACSB: *Reflective thinking*

29) The bowed out (concave) shape of the production possibilities curve implies that as production of one good

- A) increases, society must forgo increasing amounts of another good.
- B) increases, society must forgo decreasing amounts of another good.
- C) decreases, production of other goods decreases as well.
- D) increases, production of other goods increases as well.
- E) increases, society can obtain a free lunch.

Answer: A

Topic: *Increasing opportunity costs*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 3.2*

Status: *Old*

AACSB: *Reflective thinking*

- 30) The idea of increasing opportunity cost is reflected in the
- A) bowed out shape of the production possibilities frontier.
  - B) bowed in shape of the production possibilities frontier.
  - C) linear shape of the production possibilities frontier.
  - D) positive slope of the production possibilities frontier.
  - E) fact that the PPF shows there are unattainable production points.

Answer: A

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 31) A bowed out production possibilities frontier shows
- A) that resources are equally productive in all uses.
  - B) increasing opportunity cost.
  - C) that resources are not equally productive in all uses.
  - D) Both answers B and C are correct.
  - E) Both answers A and B are correct.

Answer: D

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 32) The opportunity cost of a good increases as more of it is produced because
- A) there is no such thing as a free lunch.
  - B) resources are not equally productive in all activities.
  - C) producing more of a good requires additional resources.
  - D) the number of forgone alternatives also increases.
  - E) people want the good less as more is produced.

Answer: B

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 33) As an economy increasingly specializes in producing one good, the opportunity cost of that good increases. The opportunity cost increases because
- A) resources are not equally productive in all activities.
  - B) what must be paid to resources increases.
  - C) human wants are virtually unlimited.
  - D) not all goods are equally valuable.
  - E) as more of a good is produced, the profit from its production must rise.

Answer: A

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 34) As an economy produces more of one of the goods on a bowed out production possibilities frontier, what happens to the opportunity cost of producing the good?
- A) It remains constant.
  - B) It decreases.
  - C) It increases.
  - D) It might increase, decrease, or remain constant depending on how much people value the additional units of the good.
  - E) None of these depicts what happens to opportunity cost.

Answer: C

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 35) When a production possibilities frontier is bowed outward, as more of one good is produced, its opportunity cost
- A) increases.
  - B) decreases.
  - C) remains constant.
  - D) might increase, decrease, or remain constant depending on how much people value the additional units of the good.
  - E) cannot be predicted.

Answer: A

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 36) A bowed out *PPF* reflects which of the following ideas?
- i. Increasing opportunity cost
  - ii. Resources are not equally productive in all activities.
  - iii. Prices of goods increase over time.
- A) i only
  - B) i and ii
  - C) i and iii
  - D) ii and iii
  - E) i, ii, and iii

Answer: B

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 37) If there is increasing opportunity cost, then when moving downward on a production possibilities frontier, the opportunity cost of the good on the horizontal axis \_\_\_\_\_ as more of the good is produced.
- A) increases and the *PPF* gets steeper
  - B) increases and the *PPF* gets flatter
  - C) decreases and the *PPF* gets steeper
  - D) decreases and the *PPF* gets flatter
  - E) does not change and the *PPF* gets steeper

Answer: A

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Analytical thinking

- 38) A bowed out production possibility frontier shows that the
- A) opportunity cost of a good is constant as more of the good is produced.
  - B) opportunity cost of a good decreases as more of the good is produced.
  - C) opportunity cost of a good increases as more of the good is produced.
  - D) opportunity cost relationship is linear.
  - E) opportunity cost of producing another good is negative.

Answer: C

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 39) Why does a nation experience increasing opportunity cost?
- A) As the nation moves from a production point within the *PPF* to one on the *PPF*, opportunity costs increase.
  - B) As the nation moves from a production point within the *PPF* to another point also within the *PPF*, opportunity costs increase.
  - C) When the amount of resources increases, the opportunity cost of all goods and services increases.
  - D) Resources are not equally productive in producing different kinds of goods and services.
  - E) Because the nation cannot produce at the unattainable production points that lie beyond the *PPF*.

Answer: D

Topic: Increasing opportunity costs

Skill: Level 2: Using definitions

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 40) The fact of increasing opportunity cost when moving on the *PPF* means that
- A) to increase the production of one product requires larger and larger sacrifices of the other good.
  - B) to decrease the production of one product requires smaller and smaller sacrifices of the other good.
  - C) to increase the production of one product requires smaller and smaller sacrifices of the other good.
  - D) when the government forces a movement from one point on the *PPF* to another point, no production is lost.
  - E) the *PPF* will be a negatively sloped straight line.

Answer: A

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 41) Production possibilities frontiers usually curve out and away from the origin. The implication of this curvature is that
- A) as resources are used to produce one good, fewer resources are available to produce another good.
  - B) the opportunity cost of producing a good goes down as more of that good is produced.
  - C) technological change is present.
  - D) the opportunity cost of producing a good stays the same regardless of how much of that good is produced.
  - E) some resources are better at producing one good while other resources are better at producing alternative goods.

Answer: E

Topic: Increasing opportunity costs

Skill: Level 3: Using models

Section: Checkpoint 3.2

Status: New

AACSB: Reflective thinking

- 42) If the production possibilities frontier between two goods were a straight line, then the opportunity cost of one good in terms of another would be
- A) constant.
  - B) increasing.
  - C) decreasing.
  - D) zero.
  - E) either constant, increasing, or decreasing but more information is needed to determine which.

Answer: A

Topic: Increasing opportunity costs

Skill: Level 4: Applying models

Section: Checkpoint 3.2

Status: Old

AACSB: Reflective thinking

- 43) If the production possibilities frontier between two goods is a straight line, then the
- A) opportunity cost is not a ratio.
  - B) resources are equally productive in both goods.
  - C) line does not qualify as a production possibilities frontier because the unattainable production points are too close to the inefficient production points.
  - D) Both answers A and C are correct.
  - E) Both answers A and B are correct.

Answer: B

Topic: Increasing opportunity costs

Skill: Level 4: Applying models

Section: Checkpoint 3.2

AACSB: *Reflective thinking*

### 3.3 Economic Growth

- 1) Which of the following is the best definition of economic growth?
- A) the investment in capital and consumption goods by an economy
  - B) the opportunity cost of capital
  - C) the opportunity cost of consumption
  - D) increased development of land and entrepreneurship
  - E) the sustained expansion of production possibilities

Answer: E

Topic: *Economic growth*

Skill: *Level 1: Definition*

Section: *Checkpoint 3.3*

Status: *Old*

AACSB: *Reflective thinking*

- 2) The sustained expansion of production possibilities is called
- A) economic investment.
  - B) production expansion.
  - C) opportunity cost of growth.
  - D) economic growth.
  - E) production possibilities.

Answer: D

Topic: *Economic growth*

Skill: *Level 1: Definition*

Section: *Checkpoint 3.3*

Status: *Old*

AACSB: *Reflective thinking*

- 3) Which of the following would most likely cause a country's production possibilities set to shift outward at every point along the frontier?
- A) a decrease in idle capital
  - B) a decrease in unemployment
  - C) a technological advance in only one sector of the economy
  - D) a general technological advance that affects all sectors of the economy
  - E) none of the above

Answer: D

Topic: Economic growth and the PPF

Skill: Level 3: Using models

Section: Checkpoint 3.3

Status: New

AACSB: Analytical thinking

- 4) Consider a PPF with consumption goods on the horizontal axis and capital goods on the vertical axis. If the country operates on its PPF near its \_\_\_\_\_ axis, this country \_\_\_\_\_.
- A) vertical; will experience greater economic growth
  - B) vertical; will not face opportunity costs
  - C) horizontal; will have a larger chance at economic growth
  - D) horizontal; faces larger tradeoffs
  - E) vertical; is operating at an inefficient point

Answer: A

Topic: Economic growth and the PPF

Skill: Level 3: Using models

Section: Checkpoint 3.3

AACSB: Reflective thinking

7) As an economy grows,

- A) its PPF shifts outward.
- B) it can eliminate scarcity.
- C) the opportunity cost of production will approach 0.
- D) the opportunity cost of production will increase.
- E) its PPF does not shift; instead, the production point moves from inside the PPF to be closer to the PPF.

Answer: A

Topic: Economic growth and the PPF

Skill: Level 1: Definition

Section: Checkpoint 3.3

Status: Old

AACSB: Reflective thinking

8) The opportunity cost of economic growth is

- A) 0, because it means an expansion of production possibilities.
- B) the decrease in the current production of productive factors.
- C) a slower accumulation of human capital.
- D) the decrease in the current production of consumption goods.
- E) the increase in the nation's capital stock and/or its technology.

Answer: D

Topic: Economic growth, opportunity cost

Skill: Level 1: Definition

Section: Checkpoint 3.3

Status: Old

AACSB: Reflective thinking

- 9) What is the opportunity cost of economic growth?
- A) current period consumption goods
  - B) current period capital goods
  - C) land
  - D) both current period consumption and capital goods
  - E) both current period capital goods and land

Answer: A

Topic: Economic growth, opportunity cost

Skill: Level 2: Using definitions

Section: Checkpoint 3.3

Status: Old

AACSB: Reflective thinking

- 10) The above figure shows the *PPF* for a country that produces computers and computer factories. Which of the following would most likely shift the *PPF* from *PPF*<sub>0</sub> in one year to *PPF*<sub>1</sub> in the next?
- A) Nothing, because the *PPF* does not shift.
  - B) Increase the production of computers from 9 million (at point C) to 11 million (at point B).
  - C) Decrease the production of computers from 11 million (at point B) to 9 million (at point C) and build 9 new computer factories.
  - D) Increase consumption of both computers and computer factories.
  - E) Decrease production of both computers and computer factories by moving into the interior of the *PPF*.

Answer: C

Topic: Economic growth

Skill: Level 3: Using models

Section: Checkpoint 3.3

Status: Old

AACSB: Analytical thinking

- 11) The above figure shows the *PPF* for a country that produces computers and computer factories. The nation's production possibilities frontier is  $PPF_0$ . At which of the following production points would the economy grow most rapidly?
- A) Point A
  - B) Point B
  - C) Point C
  - D) It makes no difference among the three points because they are all production efficient.
  - E) More information is needed to answer the question.

Answer: A

Topic: Economic growth

Skill: Level 3: Using models

Section: Checkpoint 3.3

Status: Old

AACSB: Analytical thinking

- 12) Suppose Puerto Rico and Hawaii currently have the same production possibilities so that the above figure is the *PPF* for hotels and consumption goods in the two areas. Hotels are a capital good that, once built, will help produce still more consumption goods. If Puerto Rico produces more hotels than Hawaii,
- A) Hawaii's *PPF* will shift outward further than Puerto Rico's *PPF*.
  - B) Hawaii's *PPF* will shift inward.
  - C) Puerto Rico's *PPF* will not shift.
  - D) Puerto Rico's and Hawaii's *PPF* will shift outward by the same amount.
  - E) Puerto Rico's *PPF* will shift outward further than Hawaii's *PPF*.

Answer: E

AACSB: Analytical thinking

- 25) On a typical acre of land, Iowa can produce either 300 pounds of beef or 100 pounds of soybeans in a year. On a typical acre of land, Nebraska can produce 150 pounds of beef or 200 pounds of soybeans. Which of the following is correct?
- A) Nebraska should produce soybeans because its opportunity cost of soybeans is lower.
  - B) Nebraska should produce soybeans because its opportunity cost of soybeans is higher.
  - C) Iowa should produce soybeans because its opportunity cost of soybeans is lower.
  - D) Iowa should produce soybeans because its opportunity cost of soybeans is higher.
  - E) Nebraska and Iowa should divide each acre evenly between soybean and beef production.

Answer: A

	Potatoes (pounds)	or	Tomatoes (pounds)
Huey	12	or	8
Steve	6	or	2

- 26) Huey and Steve can grow potatoes or tomatoes. The table above shows the pounds of potatoes and tomatoes Huey and Steve can grow in a week. Based on the table, Huey's opportunity cost of producing one pound of tomatoes is
- A) 1.5 pounds of potatoes.
  - B) 0.66 pound of potatoes.
  - C) 0, because he has an absolute advantage in it.
  - D) 0, because he has a comparative advantage in it.
  - E) 1.0 pound of potatoes.

Answer: A

### 3.7 Essay: Production Possibilities

- 1) What does the vertical intercept of a production possibilities frontier represent?

Answer: The vertical intercept is the maximum amount that can be produced if all available resources are dedicated to the production of the good or service measured on the vertical axis.

Topic: Production possibilities frontier

Skill: Level 2: Using definitions

Section: Checkpoint 3.1

Status: Old

AACSB: Reflective thinking

2) What economic concepts are represented in the production possibilities model?

Answer: There are a large number of economic concepts illustrated by the production possibilities frontier:

- Scarcity of resources: The production possibilities frontier is a frontier between attainable and unattainable combinations.
- Opportunity cost: The negative slope of the production possibilities frontier indicates that in order to get more of one good, you must produce less of the other (tradeoff).
- Increasing opportunity cost: The bowed out production possibilities frontier represents the changing opportunity costs when resources are specialized.
- Production efficiency: Points on the production possibilities frontier efficiently use all resources while points below the production possibilities frontier represent unemployed or misallocated resources and the possibility of a free lunch.

*Topic: Production possibilities frontier*

*AACSB: Reflective thinking*

5) "If Mexico is currently operating at a point beyond its production possibilities frontier, then there are unemployed or misallocated resources in Mexico." Is this statement true or false?

Briefly explain your answer.

Answer: The statement is false. It is false on two counts. First, production points beyond the production possibilities frontier are unattainable, so it is not possible for Mexico to be producing at such a point. Second, it is points *within* the production possibilities frontier that have unemployed or misallocated resources.

*Topic: Unattainable points*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

*AACSB: Written and oral communication*

- 6) "If Mexico is currently operating at a point inside its production possibilities frontier, then there are unemployed or misallocated resources in Mexico." Is this statement true or false? Briefly explain your answer.

Answer: The statement is true. Points within the production possibilities frontier are attainable, so it is possible for Mexico to be producing at a point within its frontier. At points within the production possibilities frontier, there are unemployed or misallocated resources.

*Topic: Attainable points, unemployment*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

- 7) Are all points inside the production possibilities frontier unattainable?

Answer: No, all points within the production possibilities frontier are attainable, though there are unemployed resources at these points.

*Topic: Attainable points, unemployment*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

*AACSB: Reflective thinking*

- 8) In the movie *Cast Away*, Tom Hanks plays a FedEx efficiency expert stranded on a deserted island. While on the island, he divides his time between catching fish, gathering coconuts, painting, and building a raft. Suppose that these were Mr. Hanks' only activities. Did he face an opportunity cost from pursuing any of these activities? Why or why not?

Answer: Yes, Mr. Hanks faces an opportunity cost from all of these endeavors. If he decides to use his time catching fish, he couldn't gather coconuts, paint, or build a raft. Whatever he would have been doing, not opting to catch fish is his opportunity cost of catching fish. Similarly, time spent on building his raft means less time painting, or fewer coconuts for breakfast, or fewer fish for dinner. Tradeoffs such as these are a feature of any economy that is operating on its production possibilities frontier and cannot be avoided.

*Status: Old*

*AACSB: Written and oral communication*

- 9) What does it mean when a "free lunch" is available? Relate your answer to the production possibilities frontier.

Answer: A free lunch means that there is no tradeoff, that is, the production of one good or service can be increased without decreasing the production of another good or service and thereby giving up some of the other good. A free lunch occurs when the economy is producing at a point within the production possibilities frontier because at these points some resource is unemployed. By utilizing the unemployed resource, more goods or services can be produced without giving up any other goods or services.

*Topic: Free lunches*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

*AACSB: Written and oral communication*

- 10) Describe the differences between tradeoffs and free lunches in terms of a *PPF*.

Answer: A tradeoff is a constraint or limit that forces giving up one thing in exchange for something else. When resources are fully employed, a country operates on its *PPF*. Any movement from one point to another point along the *PPF* requires the country to make a tradeoff between the two goods because one good is given up to get some other good. A free lunch occurs when some resources are not being used or not being used in their most productive way. When a country operates inside its *PPF* and moves toward its *PPF* choosing a different combination of goods, the country enjoys a free lunch. It does not face a tradeoff.

*Topic: Tradeoffs and free lunches*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

*AACSB: Written and oral communication*

- 11) On a production possibilities frontier diagram, where are production points that have tradeoffs? Where are production points with a free lunch?

Answer: A tradeoff is a situation in which a limit forces one thing to be given up in exchange for something else. Any point on the production possibilities frontier itself is a production point with a tradeoff. Why? Moving along the production possibilities frontier means that more of one good can be obtained only at the (opportunity) cost of giving up some other good, which means that there is a tradeoff. A free lunch is the absence of a tradeoff, that is, when the production of a good or service can be increased without decreasing the production of another good or service. A free lunch occurs at any point within the production possibilities frontier. At these points, resources are being used inefficiently. By utilizing the resource efficiently, more goods or services can be produced without giving up any other goods or services.

*Topic: Tradeoffs and free lunches*

*Skill: Level 1: Definition*

*Section: Checkpoint 3.1*

*Status: Old*

*AACSB: Written and oral communication*

- 12) Explain why a movement from a point inside a production possibilities frontier to the production possibilities frontier is described as a free lunch and a movement along a production possibilities frontier is described as a tradeoff.

Answer: The key point to answer this question is the fact that producing more of a good requires more resources. Hence, if all resources are employed efficiently, as is the case when producing on the production possibilities frontier, producing more of one good means reallocating resources away from the production of another good; there is a tradeoff between the two goods. In other words, to produce more of one good, the production of another must be given up. If, however, resources are used inefficiently, as is the case when producing inside the production possibilities frontier, then the production of a good can be increased by using the resources efficiently; hence no tradeoff is required and the additional goods are a free lunch.

- 14) The figure above shows a nation's production possibilities frontier for apples and oranges.
- What combination of goods is represented by point *A*?
  - What combination of goods is represented by point *B*?
  - Which point represents an unattainable combination of goods?
  - The movement from point *C* to point *D* results in a free lunch. What is the free lunch?

Answer: a. 3 million bushels of apples and 3 million bushels of oranges  
 b. 3 million bushels of apples and 4 million bushels of oranges  
 c. Point *B* is an unattainable point.  
 d. The movement from point *C* to point *D* results in an increase of 1 million bushels of oranges with no decrease in apples. Therefore the 1 million bushels of oranges are a free lunch.

AACSB: Analytical thinking

- 15) Before the first Gulf War, Kuwait had the capacity to produce a certain amount of oil from its oil wells. After the war, it found that capacity greatly diminished because the oil wells were on fire. Draw Kuwait's *PPF* before and after the war, assuming that the only two goods produced are oil and food. Further assume that setting the oil wells on fire did not affect Kuwait's ability to produce food. Explain why the *PPF* before the war is different from the *PPF* after the war.

Answer:

When a *PPF* is drawn, we draw it for a fixed amount of natural resources, along with fixed amounts of the other factors of production such as labor, capital, etc. Fire reduced Kuwait's natural resources temporarily, so the *PPF* after the war shifted inwards. However, because setting the oil wells on fire did not affect Kuwait's ability to produce food, the maximum amount of food production, the point where the *PPF* intersects the vertical axis, did not change.

### 3.8 Essay: Opportunity Cost

- 1) Moving on a bowed out *PPF*, what happens to the opportunity cost of its production as a nation specializes more in one product?

Answer: The bowed out *PPF* indicates that as the amount of the good produced increases, the good's opportunity cost increases.

Topic: *Increasing opportunity costs*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 3.2*

Status: *Old*

AACSB: *Reflective thinking*

2) Why is the production possibilities frontier bowed out?

Answer: The production possibilities frontier is bowed out because resources are not equally productive in all uses. The resources used to produce robots are different from the resources used to produce pizzas. Thus, as more of one good is produced, say robots, less productive resources must be used to increase the number of robots produced. Hence the opportunity cost of the additional robots increases, which gives the production possibilities frontier a bowed out shape.

*Topic: Increasing opportunity costs*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 3.2*

*Status: Old*

*AACSB: Written and oral communication*

3) Why does the production possibilities frontier have a bowed out shape rather than being a straight line?

Answer: The fact that as the production of one good or service increases, its opportunity cost increases means that the production possibilities frontier will be bowed out. Only if the opportunity cost remained constant as the production of a good increases would the production possibilities frontier be a straight line.

*Topic: Increasing opportunity costs*

*Skill: Level 4: Applying models*

*Section: Checkpoint 3.2*

*Status: Old*

*AACSB: Written and oral communication*

4) When economists state that the opportunity cost of a product increases as more of it is produced, what do they mean? For instance, what is the opportunity cost? And, where in a PPF diagram does this statement apply and where does it not apply?

Answer: In general, the opportunity cost of increasing the production of one good or service is the forgone production of another good or service. The statement that the opportunity cost of a product increases as more of it is produced applies to production points on the production possibilities frontier. On the production possibilities frontier, resources are fully employed. Hence to increase the production of one good or service, resources must be switched away from the production of another good or service and hence the production of that good or service decreases. And, as more of the first good or service is produced, the opportunity cost of an additional unit becomes larger, so that the opportunity cost increases. However, the assertion that the opportunity cost of a product increases as more of it is produced does not apply to production points within the production possibilities frontier. Production points within the production possibilities frontier are points at which there are resources being used inefficiently. From a production point with inefficiently used resources, to increase the production of a good, some of the resources can be used efficiently and so there is no opportunity cost in terms of forgone other products. Therefore from a point within the production possibilities frontier, the opportunity cost of increasing the production of a good is zero.

*Topic: Increasing opportunity costs*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 3.2*

*Status: Old*

*AACSB: Written and oral communication*

- 5) What is the relationship between the bowed out shape of the production possibilities frontier and the increasing opportunity cost of a good as more of it is produced?

Answer: The production possibilities frontier is bowed out because the opportunity cost of a good increases as more of it is produced. As the first unit of the good measured along the horizontal axis is produced, resources that are extremely well suited for its production can be used. Because of the suitability, not many resources need to be devoted to its production, so the opportunity cost—the decrease in the production of the good measured along the vertical axis—is not large. Hence at this location along the production possibilities frontier, the slope of the production possibilities frontier is shallow. But, as more of the product is produced, resources that are not as well suited must be devoted to its production. Consider one of the last units of this good, just before the production possibilities frontier intersects the horizontal axis. By the time the nation produces this much of the product, to produce one more unit means that resources that are extremely poorly suited in its manufacture must be used. Because these resources are not well suited, a lot of them must be used and, because a lot of them must be used, the opportunity cost in terms of the forgone other good is large. With the large decrease in the production of the good along the vertical axis, the slope of the production possibilities frontier at this location is steep. So, the production possibilities frontier goes from having a shallow slope to a steep one, that is, the production possibilities frontier is bowed outward.

Production point	Milk (gallons)	Shirts (numbers)
A	0	and 100
B	2	and 90
C	4	and 70
D	6	and 40
E	8	and 0

6) A (very, very small) country produces milk and shirts and its production possibilities frontier is in the table above.

- The nation is currently producing at point *B*. What is the opportunity cost of two additional gallons of milk? At point *C*? At point *D*? What do your results show?
- Suppose the nation is initially producing 4 gallons of milk and 40 shirts. What is the opportunity cost of 2 additional gallons of milk? Explain your answer.

Answer: a. At point *B*, the opportunity cost of 2 additional gallons of milk is 20 shirts. At point *C*, the opportunity cost of 2 additional gallons of milk is 30 shirts. At point *D*, the opportunity cost of 2 additional gallons of milk is 40 shirts. The opportunity cost of 2 additional gallons of milk increases as more milk is produced.

b. Producing 4 gallons of milk and 40 shirts means that the nation is producing at a point within the interior of its production possibilities frontier. Hence the opportunity cost of producing an additional 2 gallons of milk is 0. The opportunity cost is 0 because at a production point in the interior of the production possibilities frontier there are unemployed resources. These unemployed resources can be put to work producing the additional 2 gallons of milk. Because they were not producing anything previously, there is no decrease in the production of shirts and hence no opportunity cost.

Production point	Pages typed		Web pages created
A	0	and	4
B	40	and	3
C	70	and	2
D	90	and	1
E	100	and	0

7) Jean can either type her term paper or create Web pages during the limited time she has available. The table above shows her *PPF*.

- Can Jean type 90 pages and create 2 Web pages?
- Use the above numbers to calculate the opportunity cost of a typed page as she increases her time typing and decreases time creating a Web page.

Answer: a. Jean cannot type 90 pages and create 2 Web pages because, as row *D* shows, that combination is beyond her *PPF*.

- The opportunity cost is the ratio of the decrease in the number of Web pages divided by the increase in the number of typed pages. The following table gives the opportunity cost for typed pages.

Movement from	Increase in typed pages	Decrease in Web pages	Opportunity cost
<i>A to B</i>	40	1	1/40
<i>B to C</i>	30	1	1/30
<i>C to D</i>	20	1	1/20
<i>D to E</i>	10	1	1/10

<b>Production point</b>	<b>Wheat (bushels)</b>		<b>Soybeans (bushels)</b>
<i>A</i>	1,500	and	0
<i>B</i>	1,000	and	2,250
<i>C</i>	500	and	3,500
<i>D</i>	0	and	4,000

- 8) The table above gives the production possibilities frontier for a nation that produces wheat and soybeans. Use the information in that table to complete the table below, which has in it the opportunity costs of moving from one production point to another. Do not forget to note the units of the opportunity costs.

<b>Movement from</b>	<b>Opportunity cost</b>	<b>Movement from</b>	<b>Opportunity cost</b>
<i>A to B</i>		<i>D to C</i>	
<i>B to C</i>		<i>C to B</i>	
<i>C to D</i>		<i>B to A</i>	

Answer:

<b>Opportunity cost</b>		<b>Opportunity cost</b>	
<b>Movement from</b>	<b>(bushels of soybeans per bushel of wheat)</b>	<b>Movement from</b>	<b>(bushels of wheat per bushel of soybeans)</b>
<i>A to B</i>	0.22	<i>D to C</i>	1.00
<i>B to C</i>	0.40	<i>C to B</i>	2.50
<i>C to D</i>	1.00	<i>B to A</i>	4.50

The table above gives the opportunity costs. The units of the opportunity costs are in the column headings.

- 9) The figure above represents the production possibilities frontier for a country.
- The nation is currently producing at point *B* and wants to move to point *C*. What is the opportunity cost of the move?
  - The nation is currently producing at point *B* and wants to move to point *A*. What is the opportunity cost of the move?
  - The nation is currently producing at point *D* and wants to move to point *B*. What is the opportunity cost of the move?

Answer: a. By moving from point *B* to point *C*, the production of automobiles decreases by 1 million, from 3 million to 2 million. The 1 million decrease in automobiles is the opportunity cost of the movement.

b. By moving from point *B* to point *A*, the production of cameras decreases by 3 million, from 3 million to 0 million. The 3 million decrease in cameras is the opportunity cost of the movement.

c. By moving from point *D* to point *B* the nation gains 1 million additional cameras and also gains 2 million additional automobiles. The opportunity cost of this movement is zero, because there are no goods forgone. No goods are forgone because the nation is moving from a point with inefficiently used resources, point *D*, to one at which resources are efficiently utilized, point *B*.

Production point	Beef (pounds)	Wheat (bushels)
A	0	9
B	2	7
C	4	4
D	6	0

- 10) The table above presents the production possibilities of Farmer Brown. Use these data to calculate Farmer Brown's opportunity cost of additional beef as Farmer Brown moves from point A to B to C to D. Also use the data to calculate Farmer Brown's opportunity cost of additional wheat as Farmer Brown moves from point D to C to B to A. Based on these costs, does Farmer Brown use resources that are more productive in one activity than the other or are they equally productive in both uses? Explain your answer.

Answer: The opportunity cost of a pound of beef is 1 bushel of wheat between points A and B, 1 1/2 bushels of wheat between points B and C, and 2 bushels of wheat between points C and D. The opportunity cost of a bushel of wheat is 1/2 pound of beef between points D and C, 2/3 pound of beef between points C and B, and 1 pound of beef between points B and A. Farmer Brown does use resources that are more productive in one activity than the other because the opportunity costs of producing beef and wheat increase as more beef and wheat are produced. If the resources were equally productive in both activities, the opportunity costs would be constant.

### 3.10 Essay: Specialization and Trade

- 1) What is comparative advantage? Give an example.

Answer: Comparative advantage is the ability of a person to produce a good at a lower opportunity cost compared to another person. A lower opportunity cost means that the person gives up less to produce the good compared to another person. For example, one person may need to give up one hour of typing to get dinner made while another person must give up two hours of typing to produce the same dinner.

AACSB: Written and oral communication

- 2) "When a person has an absolute advantage in producing a good, the person necessarily has a lower opportunity cost of producing it." Is this assertion true or false?

Answer: The assertion is incorrect. An absolute advantage is when a person can produce more of the good than someone else. A comparative advantage relies on a comparison of opportunity costs, so a person has a comparative advantage in producing a good if the person can produce the good at a lower opportunity cost.

*Topic: Comparative advantage versus absolute advantage*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Written and oral communication*

- 3) "When a person is more productive in producing a good or service than another person, the first person has the comparative advantage in producing the good." Is this assertion correct or incorrect? Explain your answer.

Answer: The assertion is incorrect. The statement describes an absolute advantage, that is, a person has an absolute advantage in the production of a good if the person can produce more of it in a given time period than someone else. Comparative advantage, however, relies on a comparison of opportunity costs. A person has a comparative advantage in producing a good if the person can produce the good at a lower opportunity cost than another person.

*AACSB: Written and oral communication*

- 4) Why is it likely that the United States has an absolute advantage in goods and yet it still ends up importing them from other countries?

Answer: The United States might have an absolute advantage in producing a good but not a comparative advantage. In this case, the opportunity cost of producing the good in the United States is higher than in another country. Thus the United States will import the product from the other country.

*Topic: Comparative advantage versus absolute advantage*

*Skill: Level 3: Using models*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Written and oral communication*

- 5) The United States has an absolute advantage in producing sugar over all of the other sugar producing countries. Does this fact mean that we should not import any sugar from the other countries?

Answer: Having an absolute advantage doesn't mean that the United States should engage in the production of sugar. If the opportunity cost of sugar in the United States is higher than in the other countries, then the other countries will have the comparative advantage. The countries with the comparative advantage are the ones that should do the producing. Quite likely these other nations have the comparative advantage and so it would be good policy for the United States to import sugar from these nations.

- 6) Japan can use all of its resources to produce 100 videos or 400 shoes. China can use all of its resources to produce 25 videos or 200 shoes. Which nation has the comparative advantage in shoes and which nation has the comparative advantage in videos?

Answer: In Japan, the opportunity cost of producing a video is 4 shoes and in China it is 8 shoes. Therefore Japan has the comparative advantage in producing videos because its opportunity cost is lower. In Japan, the opportunity cost of producing a shoe is  $\frac{1}{4}$  of a video and in China the opportunity cost of producing a shoe is  $\frac{1}{8}$  of a video. China has the comparative advantage in producing shoes because its opportunity cost is lower.

China's production in 1 hour		Pakistan's production in 1 hour	
Cloth	8	Cloth	4
Cheese	16	Cheese	12

- 8) The table above shows the amounts of cloth and cheese that China and Pakistan can produce in an hour. Which country has the comparative advantage in cloth and which country has the comparative advantage in cheese?

Answer: In China, to produce 8 cloths has an opportunity cost of 16 cheeses, so the opportunity cost of 1 cloth is  $(16 \text{ cheese}) / (8 \text{ cloths}) = 2 \text{ cheeses per cloth}$ . In Pakistan, to produce 4 cloths has an opportunity cost of 12 cheeses. Hence the opportunity cost of 1 cloth is  $(12 \text{ cheeses}) / (4 \text{ cloths})$  or 3 cheeses per cloth. Because China's opportunity cost of a cloth is lower, China has the comparative advantage in producing cloth.

In China, to produce 16 cheeses has an opportunity cost of 8 cloths, so the opportunity cost of 1 cheese is  $(8 \text{ cloths}) / (16 \text{ cheeses}) = 1/2 \text{ cloth per cheese}$ . In Pakistan, to produce 12 cheeses has an opportunity cost of 4 cloths. Hence the opportunity cost of 1 cheese is  $(4 \text{ cloths}) / (12 \text{ cheeses})$  or  $1/3 \text{ cloth per cheese}$ . Because Pakistan's opportunity cost of a cheese is lower, Pakistan has the comparative advantage in producing cheese.

Omar's production in 1 day		John's production in 1 day	
Computers fixed	12	Computers fixed	4
Lines of code	800	Lines of code	200

- 9) Omar and John can fix computers or write computer programs. The table above shows the number of computers they can fix and the lines of code they can write in a day.

- Who, if anyone, has the absolute advantage?
- Who has the comparative advantage in fixing computers? Why?
- Who has the comparative advantage in writing programs? Why?

Answer: a. Omar has an absolute advantage in fixing computers and writing code because he can fix 12 per day compared to John who can fix only 4 per day, and can write 800 lines of code per day compared to John who can write only 200 lines a day.

b. John has the comparative advantage in fixing computers. He has the comparative advantage because his opportunity cost of fixing one computer is 50 lines of computer code. Omar does not have a comparative advantage in fixing computers because his opportunity cost of fixing a computer is higher at 66.7 lines of code.

c. Omar has the comparative advantage in writing programs. His opportunity cost of writing one line of code is .015 of a computer fixed. John does not have the comparative advantage in writing programs because his opportunity cost of writing one line of code is 0.02 computers fixed. (Alternatively, to write 1 line of code costs Omar the opportunity to repair 1.5 percent of a computer and costs John the opportunity to repair 2.0 percent of a computer.)

Nation A's production in 1 day		Nation B's production in 1 day	
Computers	100	Computers	120
Software	140	Software	150

- 10) Two nations can produce computers and software in the amounts given in the table above. Does either nation have an absolute advantage in producing the products? Which nation has a comparative advantage in computers? Which nation has a comparative advantage in software? Explain your answers.

Answer: Nation B has an absolute advantage in producing both goods because it can produce more of both in one day than can Nation A. Nation B has the comparative advantage in computer production and Nation A has the comparative advantage in software. The nation with the lowest opportunity cost of producing a good has the comparative advantage in that good. In Nation A, to produce 100 computers has the opportunity cost of 140 units of software forgone, so the opportunity cost of 1 computer equals  $(140 \text{ units of software}) / (100 \text{ computers}) = 1.4$  units of software per computer. In Nation B, similar calculations show that the opportunity cost for a computer is 1.25 units of software per computer. Nation B's opportunity cost is lower, so Nation B has the comparative advantage in computers. For software, in Nation A the opportunity cost of a unit of software is  $(100 \text{ computers}) / (140 \text{ units of software}) = 0.71$  computers per unit of software while in Nation B the opportunity cost is  $(120 \text{ computers}) / (150 \text{ units of software}) = 0.80$  computers per unit of software. Nation A's opportunity cost is lower, so Nation A has the comparative advantage in software.

*AACSB: Analytical thinking*

- 11) The figure above shows Prakash's and Gail's production possibilities frontiers for writing books and magazine articles.
- What is Prakash's opportunity cost of a book? What is Gail's opportunity cost? Who has the comparative advantage in writing books?
  - Who has the comparative advantage in writing magazine articles?
  - According to their comparative advantages, who should write books and who should write magazine articles?

Answer: a. In a year, Prakash can write 2 books or 40 magazine articles. Hence the opportunity cost of 1 book is  $(40 \text{ magazine articles}) \div (2 \text{ books}) = 20$  magazine articles per book. In a year, Gail can write 3 books or 30 magazine articles. Hence the opportunity cost of 1 book is  $(30 \text{ magazine articles}) \div (3 \text{ books}) = 10$  magazine articles per book. Gail's opportunity cost of writing books is lower than Prakash's, so Gail has the comparative advantage in writing books.

b. Prakash has the comparative advantage in writing magazine articles.

c. Gail has the comparative advantage in writing books, so she should write books. Prakash has the comparative advantage in writing magazine articles, so he should write magazine articles.

- 12) "When countries specialize in producing the good in which they have a comparative advantage and then trade with each other, only the country with the absolute advantage gains." Is the previous statement correct or incorrect? Briefly explain your answer.

Answer: The statement is incorrect. Absolute advantage, which is essentially the ability to produce more of a good than another country, has nothing to do with the gains from trade. All nations gain from free international trade regardless of whether they possess an absolute advantage or not.

*Topic: Gains from trade*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Written and oral communication*

- 13) "Because the United States is the largest economy in the world and can produce anything it needs domestically, there are no gains from trade for the United States." Is the previous statement correct or incorrect?

Answer: The statement is incorrect. The United States, like any other nation, gains from trade when it specializes according to comparative advantage.

*Topic: Gains from trade*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Reflective thinking*

- 14) How can a nation that is at an absolute *disadvantage* gain from trade?

Answer: Being at an absolute disadvantage means that the nation can produce less than its trading partner, but it says nothing about the relative costs of producing the goods. International trade is based on comparative advantage, which means that the low-cost producer specializes in the production of a good and exports it to the other nation that has the higher cost of production. A nation that has an absolute disadvantage still has a lower opportunity cost of production for one of the goods and hence has the comparative advantage in the production of that good. Therefore this country will gain from trade, as will all its trading partners.

*Topic: Gains from trade*

*Skill: Level 4: Applying models*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Written and oral communication*

- 15) Why do nations engage in international trade?

Answer: Nations engage in international trade because they gain from trade. International trade results in a more efficient use of resources and thereby increases world output. As a result, it increases the amount of goods and services available for consumption in all nations and thereby makes all countries better off.

*Topic: Gains from trade*

*Skill: Level 3: Using models*

*Section: Checkpoint 3.4*

*Status: Old*

*AACSB: Written and oral communication*

16) Explain why specialization and trade increases a country's overall level of consumption.

Answer: A country specializes in the activities in which it has the lowest opportunity cost. By trading, it can obtain goods and services at a lower opportunity cost than it would cost to produce the goods and services domestically. Hence the nation acquires goods and services at a lower cost than before and so the nation's consumption increases. In fact, trade allows the nation to consume at a point beyond its production possibilities frontier.

AACSB: Analytical thinking

- 30) The market demand curve for mousetraps is
- A) found by summing the quantities of mousetraps demanded at each income level by each buyer.
  - B) found by summing the prices of mousetraps at each quantity of mousetraps demanded by each buyer.
  - C) the horizontal sum of the individual demand curves for mousetraps of all the buyers.
  - D) Both answers B and C are correct.
  - E) Both answers A and C are correct.

Answer: C

Topic: Individual and market demand

Skill: Level 1: Definition

Section: Checkpoint 4.1

Status: Old

AACSB: Analytical thinking

- 31) To find the market demand curve for in-line skates, we must
- A) add the quantities demanded at every price and every income by every buyer of in-line skates.
  - B) add the quantities demanded at prices that all buyers can afford to pay.
  - C) sum horizontally the individual demand curves of all the buyers.
  - D) take account of the skate buying plans of all actual and potential buyers in all possible situations.
  - E) None of the above answers is correct because we need also to take account of the supply of in-line skates.

Answer: C

- A) a fall in the price of soda
  - B) a rise in the price of a fitness club membership
  - C) an increase in the number of buyers of bottled water
  - D) a fall in the price of bottled water
  - E) a rise in the price of bottled water

Answer: D

Topic: Changes in quantity demanded

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Analytical thinking

Price (dollars per latte)	Quantity demanded (lattes per hour)
1	90
2	80
3	60
4	30

- 83) The table above gives the demand schedule for lattes at the Bottomless Cup. If the price of a latte is \$3, then the quantity of lattes demanded is \_\_\_\_\_ an hour.
- A) 90                      B) 30                      C) 80                      D) 60                      E) 230

Answer: D

Topic: Quantity demanded

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Analytical thinking

- 84) Other things remaining the same, the quantity of a good or service demanded will increase if the price of the good or service
- A) rises.  
B) falls.  
C) does not change.  
D) rises or does not change.  
E) rises or falls.

Answer: B

Topic: Law of demand

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 85) The "law of demand" indicates that if the University of Maine increases tuition, all other things remaining the same,
- A) the demand for classes will decrease at the University of Maine.  
B) the demand for classes will increase at the University of Maine.  
C) the quantity of classes demanded will increase at the University of Maine.  
D) the quantity of classes demanded will decrease at the University of Maine.  
E) both the demand for and the quantity of classes demanded will decrease at the University of Maine.

Answer: D

Topic: Law of demand

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 86) The graph illustrates the demand for peanuts. Peanuts are a normal good because the
- A) demand curve for peanuts slopes downward.
  - B) demand for peanuts increases when income increases.
  - C) demand for peanuts increases when the price of one of its substitutes rises.
  - D) peanuts have both substitutes and complements.
  - E) demand curve shows that if the price of peanuts rises, there is a movement along the demand curve to a lower quantity demanded.

Answer: B

Topic: Normal goods

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Analytical thinking

- 87) A normal good is *defined* as a good
- A) with a downward sloping demand curve.
  - B) for which demand increases when the price of a substitute rises.
  - C) for which demand increases when income increases.
  - D) for which demand increases when the number of demanders increases.
  - E) for which demand increases when the price of a complement falls.

Answer: C

Topic: Normal goods

Skill: Level 1: Definition

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 88) Soda and peanuts are complements. Other influences on buying plans remaining the same, a rise in the price of soda
- A) increases the demand for peanuts.
  - B) decreases the demand for peanuts.
  - C) decreases the demand for soda.
  - D) increases the demand for soda.
  - E) has no effect on the demand for peanuts, though it does change the quantity demanded of peanuts.

Answer: B

Topic: Changes in demand, price of a complement

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 89) People come to expect that the price of a gallon of gasoline will rise next week. As a result,
- A) today's supply of gasoline increases.
  - B) today's demand for gasoline increases.
  - C) the price of a gallon of gasoline falls today.
  - D) next week's supply of gasoline decreases.
  - E) today's demand for gasoline and today's supply of gasoline do not change.

Answer: B

Topic: Changes in demand, expectations

Skill: Level 3: Using models

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 90) One reason the demand for laptop computers might increase is a
- A) fall in the price of a laptop computers.
  - B) fall in price of desktop computers.
  - C) change in preferences as laptops have become more portable, with faster processors and larger hard drives.
  - D) poor quality performance record for laptop computers.
  - E) decrease in income if laptops are a normal good.

Answer: C

Topic: Changes in demand, preferences

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 91) Teenagers drink more soda than other age groups. If the number of teenagers increases, everything else remaining the same,
- A) market demand for soda increases.
  - B) market demand for soda decreases.
  - C) market demand for soda does not change.
  - D) there is a movement along the market demand curve for soda.
  - E) None of the above answers is correct because the effect on the demand depends whether the supply curve shifts rightward, leftward, or not at all.

Answer: A

Topic: Changes in demand, number of buyers

Skill: Level 3: Using models

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 92) The number of buyers of sport utility vehicles, SUVs, decreases sharply. So the
- A) demand curve for SUVs shifts leftward.
  - B) demand curve for SUVs shifts rightward.
  - C) demand curve for SUVs does not shift, nor is there a movement along then demand curve.
  - D) demand curve for SUVs does not shift, but there is a movement downward along it.
  - E) supply curve for SUVs shifts rightward.

Answer: A

Topic: Changes in demand, number of buyers

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

93) When moving along a demand curve, which of the following changes?

- A) the consumers' incomes
- B) the prices of other goods
- C) the number of buyers
- D) the price of the good
- E) the consumers' preferences

Answer: D

Topic: Movement along the demand curve

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

94) The graph illustrates the demand curve for soda. After a rise in the price of a soda from \$1.00 a can to \$2.00 a can, the quantity of soda demanded

- A) decreases from 2 cans to 0 cans a day.
- B) increases from 0 cans to 2 cans a day.
- C) remains unchanged.
- D) decreases from 1 can to 0 cans a day.
- E) cannot be determined from the figure because the demand curve will shift to a new curve.

Answer: A

Topic: Movement along the demand curve

Skill: Level 2: Using definitions

Section: Checkpoint 4.1

Status: Old

AACSB: Analytical thinking

95) Pizza and tacos are substitutes, and the price of a pizza increases. Which of the following correctly indicates what happens?

- A) The demand for pizzas decreases and the demand for tacos increases.
- B) The demand for both goods decreases.
- C) The quantity of tacos demanded increases and the quantity of pizza demanded decreases.
- D) The quantity of pizza demanded decreases and the demand for tacos increases.
- E) The demand for each decreases because both are normal goods.

Answer: D

Topic: *Changes in quantity demanded versus change in demand*

- 3) The law of supply states that, other things remaining the same,
- A) demand increases when supply increases.
  - B) if the price of a good increases, firms buy less of it.
  - C) if the price of a good increases, the quantity supplied increases.
  - D) as people's income increase, the supply of goods increases.
  - E) if the price of a good increases, the supply increases.

Answer: C

Topic: *Law of supply*

Skill: *Level 1: Definition*

Section: *Checkpoint 4.2*

Status: *Old*

AACSB: *Reflective thinking*

- 4) The law of supply states that other things remaining the same, a decrease in the price of a kayak leads to
- A) a decrease in the supply of kayaks.
  - B) a decrease in the quantity of kayaks supplied.
  - C) an increase in the supply of kayaks.
  - D) an increase in the quantity of kayaks supplied.
  - E) an increase in the supply of kayaks *and* a decrease in the quantity of kayaks supplied.

Answer: B

Topic: *Law of supply*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 4.2*

Status: *Old*

AACSB: *Reflective thinking*

- 5) Which of the following helps explain why the law of supply exists?
- A) Larger outputs result in lower costs of production.
  - B) The law of increasing opportunity cost
  - C) The costs of production remain constant throughout all levels of output.
  - D) Sellers realize that if the price increases, they make larger profits and do not need to change their production.
  - E) The law of demand

Answer: B

Topic: Law of supply

Skill: Level 2: Using definitions

Section: Checkpoint 4.2

Status: Old

AACSB: Reflective thinking

- 6) The law of supply reflects the fact that
- A) people buy more of a good when its price falls.
  - B) suppliers have an incentive to use their resources in the way that brings the biggest return.
  - C) higher prices are more attractive to consumers because they signal a higher quality product.
  - D) businesses can sell more goods at lower prices.
  - E) the demand curve is downward sloping.

Answer: B

Topic: Law of supply

Skill: Level 2: Using definitions

Section: Checkpoint 4.2

Status: Old

AACSB: Reflective thinking

- 7) The supply schedule
- A) shows the relationship between the quantity supplied and the price of a good when all other influences on selling plans remain the same.
  - B) is a curve showing the relationship between the amount the sellers are willing and able to sell and the price of that good when all relevant factors change.
  - C) shows one quantity at one price.
  - D) is the schedule that suppliers have to keep or else they will be late.
  - E) shows the relationship between the quantity supplied and the price of a good when all other influences on selling plans change.

Answer: A

Topic: Supply schedule

Skill: Level 1: Definition

Price (dollars per cellular phone)	Quantity demanded (thousands)	Quantity supplied (thousands)
100	50	100
80	55	80
50	60	60
20	100	40

- 18) Using the data in the table above, the equilibrium quantity and equilibrium price for a cellular telephone are
- A) 50,000 and \$100.
  - B) 80,000 and \$80.
  - C) 60,000 and \$50.
  - D) 40,000 and \$20.
  - E) 100,000 and \$20.

Answer: C

Topic: Market equilibrium

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 19) Using the data in the table above, at the price of \$80 a phone,
- A) a shortage of 25,000 cellular telephones occurs.
  - B) a surplus of 80,000 cellular telephones occurs.
  - C) a surplus of 25,000 cellular telephones occurs.
  - D) a shortage of 55,000 cellular telephones occurs.
  - E) the market is in equilibrium.

Answer: C

Topic: Surplus

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

Price (dollars per stapler)	Quantity demanded (thousands of staplers per week)	Quantity supplied (thousands of staplers per week)
8	10	90
7	40	80
6	70	70
5	100	60

20) Using the data in the table above, the equilibrium quantity and equilibrium price for a stapler is

- A) 10,000 and \$8.
- B) 90,000 and \$8.
- C) 100,000 and \$5.
- D) 70,000 and \$6.
- E) 60,000 and \$5.

Answer: D

Topic: Market equilibrium

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

21) Using the data in the table above, if the price of a stapler is \$8, then there is \_\_\_\_\_ of staplers and the quantity of staplers demanded \_\_\_\_\_ the quantity of staplers supplied.

- A) a surplus; is greater than
- B) a surplus; is less than
- C) a shortage; is greater than
- D) a shortage; is less than
- E) neither a surplus nor a shortage; equals

Answer: B

Topic: Surplus

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

22) Using the data in the table above, if the price of a stapler is \$5, then there is \_\_\_\_\_ of staplers, and the quantity of staplers demanded \_\_\_\_\_ the quantity of staplers supplied.

- A) a surplus; is greater than
- B) a surplus; is less than
- C) a shortage; is greater than
- D) a shortage; is less than
- E) neither a surplus nor a shortage; equals

Answer: C

Topic: Shortage

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 23) In the figure above, a price of \$35 per dozen roses results in
- A) a shortage.
  - B) equilibrium.
  - C) a surplus.
  - D) upward pressure on the price of roses.
  - E) an eventual rightward shift of the demand curve and/or leftward shift of the supply curve.

Answer: C

Topic: Surplus

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 24) In the figure above, a price of \$15 per dozen roses results in
- A) equilibrium.
  - B) a shortage.
  - C) a surplus.
  - D) downward pressure on the price of roses.
  - E) an eventual leftward shift of the demand curve and/or rightward shift of the supply curve.

Answer: B

Topic: Shortage

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 25) The above figure shows the market for game day t-shirts. If the price of t-shirts is \$8, then
- A) there is a shortage and the price of t-shirts will rise.
  - B) there is a surplus and the price of t-shirts will rise.
  - C) the market is in equilibrium.
  - D) there is a shortage and the price of t-shirts will fall.
  - E) there is a surplus and the price of t-shirts will fall.

Answer: A

Topic: Surplus, shortage, market equilibrium

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 26) The above figure shows the market for game day t-shirts. If the price of t-shirts is \$10, then
- A) there is a surplus and the price of t-shirts will rise.
  - B) there is a shortage and the price of t-shirts will rise.
  - C) there is a shortage and the price of t-shirts will fall.
  - D) there is a surplus and the price of t-shirts will fall.
  - E) the market is in equilibrium.

Answer: E

Topic: Surplus, shortage, market equilibrium

Skill: Level 3: Using models

Section: Checkpoint 4.3

AACSB: Analytical thinking

- 27) The above figure shows the market for game day t-shirts. If the price of t-shirts is \$12, then
- A) there is a shortage and the price of t-shirts will fall.
  - B) there is a shortage and the price of t-shirts will rise.
  - C) there is a surplus and the price of t-shirts will rise.
  - D) there is a surplus and the price of t-shirts will fall.
  - E) the market is in equilibrium.

Answer: D

Topic: Surplus, shortage, market equilibrium

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 28) The above figure shows the market for game day t-shirts. If the price of t-shirts is \$8, then
- A) the market is in equilibrium.
  - B) there is a surplus and the price of t-shirts will rise.
  - C) the quantity demanded is greater than quantity supplied.
  - D) there is a shortage and the price of t-shirts will fall.
  - E) there is a surplus and the price of t-shirts will fall.

Answer: C

Topic: Surplus, shortage, market equilibrium

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 29) Assume a competitive market is in equilibrium. There is an increase in demand, but no change in supply. As a result, the equilibrium price \_\_\_\_\_, and the equilibrium quantity \_\_\_\_\_.
- A) rises; increases
  - B) rises; does not change
  - C) falls; does not change
  - D) falls; decreases
  - E) falls; increases

Answer: A

Topic: Effects of an increase in demand

Skill: Level 2: Using definitions

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 30) If a market begins in equilibrium and then the demand curve shifts leftward, a
- A) shortage is created, which is eliminated by a fall in price.
  - B) shortage is created, which is eliminated by a rise in price.
  - C) surplus is created, which is eliminated by a fall in price.
  - D) surplus is created, which is eliminated by a rise in price.
  - E) surplus is created, which is eliminated by the supply curve shifting leftward.

Answer: C

Topic: Effects of a decrease in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 31) When the demand curve shifts rightward and the market moves to a new equilibrium, then the
- A) supply increases.
  - B) supply decreases.
  - C) quantity supplied increases.
  - D) quantity supplied decreases.
  - E) price falls to restore the equilibrium.

Answer: C

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 32) Suppose the equilibrium quantity of movie tickets is 1000. If the demand curve shifts \_\_\_\_\_, the equilibrium quantity of movie tickets will \_\_\_\_\_.
- A) rightward; increase
  - B) rightward; decrease
  - C) leftward; increase
  - D) rightward; not change
  - E) leftward; not change

Answer: A

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

AACSB: Analytical thinking

33) If consumers buy a large number of plug-in electric cars, the equilibrium price of electricity will \_\_\_\_\_ and the equilibrium quantity of electricity will \_\_\_\_\_.

- A) rise; increase
- B) rise; decrease
- C) fall; increase
- D) fall; decrease
- E) not change; increase

Answer: A

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

34) Because of a sharp increase in the price of gasoline, the demand for Sports Utility vehicles (SUVs) has decreased. So, the high price of gasoline leads to a

- A) leftward shift of the demand curve for SUVs *and* the supply curve of SUVs.
- B) leftward shift of the demand curve for SUVs and no shift in the supply curve of SUVs.
- C) leftward shift of the demand curve for SUVs and a rightward shift of the supply curve of SUVs.
- D) leftward shift of the supply curve of SUVs and no shift in the demand curve for SUVs.
- E) rightward shift of the supply curve of SUVs and no shift in the demand curve for SUVs.

Answer: B

Topic: Effects of an increase in demand

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

35) If the price of tangerines increases, the price of oranges also rises because

- A) consumers consider the two goods complements, and so sellers decreased the supply of oranges.
- B) consumers consider the two goods substitutes, and demand for oranges increases.
- C) if the supply of tangerines decreased, then the supply of oranges also must decrease.
- D) buyers must have expected a higher price for oranges and thus increased their demand for oranges.
- E) buyers' incomes must have decreased, and oranges are an inferior good.

Answer: B

Topic: Effects of an increase in demand

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 36) Suppose that the equilibrium price and quantity of new houses both increase. Which of the following could be a cause of this change?
- A) Both the supply and the demand for new houses increased, and the supply increased by more than the demand.
  - B) The demand for new houses increased, and the supply did not change.
  - C) Both the supply and demand for new houses decreased.
  - D) The supply of new houses decreased, and the demand for new houses did not change.
  - E) The supply of new houses increased, and the demand for new houses did not change.

Answer: B

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 37) Suppose that the equilibrium price and quantity of new houses both increase. Which of the following could be a cause of this change?
- A) The wage paid carpenters who build new houses might have risen.
  - B) A technological advance in framing a new house might have occurred.
  - C) The rent for nearby apartments might have fallen.
  - D) More home buyers might have moved into the area.
  - E) The cost of wood framing used to build houses might have fallen.

Answer: D

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

74) If the demand and supply both increase equally, then the equilibrium price \_\_\_\_\_, and the equilibrium quantity \_\_\_\_\_.

- A) increases; increases
- B) increases; does not change
- C) does not change; increases
- D) increases; decreases
- E) decreases; does not change

Answer: C

Topic: Effects of an increase in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

75) Kiwis and strawberries are substitutes for consumers. An increase in the price of a kiwi coupled with an increase in the number of strawberry growers \_\_\_\_\_ the equilibrium price of a pound of strawberries and \_\_\_\_\_ the equilibrium quantity of strawberries.

- A) raises; increases
- B) probably changes, but more information is needed to determine if it rises or falls; increases
- C) raises; probably changes, but more information is needed to determine if it increases or decreases
- D) lowers; probably changes, but more information is needed to determine if it increases or decreases
- E) lowers; increases

Answer: B

Topic: Effects of an increase in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

76) A competitive market is in equilibrium. Then there is a decrease in demand and a decrease in supply. The equilibrium price \_\_\_\_\_, and the equilibrium quantity \_\_\_\_\_.

- A) rises; decreases
- B) perhaps changes but we can't say if it rises, falls, or stays the same; decreases
- C) falls; increases
- D) perhaps changes but we can't say if it rises, falls, or stays the same; increases
- E) rises; increases

Answer: B

Topic: Effects of a decrease in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 77) If both supply and demand decrease by the same amount, the equilibrium price
- A) does not change.
  - B) rises.
  - C) falls.
  - D) cannot be predicted.
  - E) None of the answers is correct because the price depends on what happens to the equilibrium quantity.

Answer: A

Topic: Effects of a decrease in demand and a decrease in supply

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 78) Both the demand for and supply of cars changes in France. You observe that the quantity of cars does not change but the price rises. Thus, which of the following occurred?
- A) Demand and supply increased by an equal amount.
  - B) Demand and supply decreased by an equal amount.
  - C) Demand increased and supply decreased by an equal amount.
  - D) Demand decreased and supply increased by an equal amount.
  - E) Demand increased by a larger magnitude than supply decreased.

Answer: C

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 79) Suppose chickens and beef cattle are produced by different companies on different sites. If bad weather causes an increase in the price of hay, a food eaten by beef cattle but not by chickens, the equilibrium price of beef will \_\_\_\_\_, and the equilibrium price of chicken will \_\_\_\_\_.

- A) decrease; decrease
- B) decrease; increase
- C) stay the same; increase
- D) increase; increase
- E) increase; decrease

Answer: D

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: New

AACSB: Analytical thinking

- 80) What happens to the equilibrium price and quantity of automobile tires if rubber prices increase and the price of automobiles falls?
- A) The equilibrium price and quantity decrease.
  - B) The equilibrium price falls, but the change in equilibrium quantity is unknown.
  - C) The equilibrium price and quantity increase.
  - D) The equilibrium quantity decreases, but the change in equilibrium price is unknown.
  - E) The equilibrium price rises, but the change in equilibrium quantity is unknown.

Answer: E

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: New

AACSB: Analytical thinking

- 81) Suppose that the demand curve for desktop computers shifts rightward and at the same time the supply curve shifts leftward. Which of the following could have caused these shifts?
- A) Desktop computers are a normal good and incomes increased, while more firms entered the market.
  - B) The price of a laptop computer, a substitute for desktop computers, fell and the cost of producing desktop computers decreased.
  - C) Consumers purchased more computers because of the Christmas season and the labor costs of producing desktop computers decreased.
  - D) Desktop computers are a normal good and incomes increased, while the labor costs of producing personal computers increased.
  - E) Desktop computers are a normal good and incomes decreased, while the labor costs of producing personal computers increased.

Answer: D

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 82) If the demand curve for desktop computers shifts rightward and at the same time the supply curve shifts leftward, then
- A) the equilibrium price definitely rises.
  - B) the equilibrium price definitely falls.
  - C) the equilibrium price definitely remains the same.
  - D) More information is needed to determine the effect on the equilibrium price.
  - E) the equilibrium quantity definitely increases.

Answer: A

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 83) If the demand curve for desktop computers shifts rightward and at the same time the supply curve shifts leftward, then
- A) the equilibrium quantity definitely increases.
  - B) the equilibrium quantity definitely decreases.
  - C) the equilibrium quantity definitely remains the same.
  - D) More information is needed to determine the effect on the equilibrium quantity.
  - E) the equilibrium price definitely falls.

Answer: D

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 84) The demand for oranges increases while the supply decreases. The equilibrium price of oranges \_\_\_\_\_, and the equilibrium quantity \_\_\_\_\_.
- A) rises; decreases
  - B) falls; perhaps changes but we can't say if it increases, decreases, or stays the same
  - C) falls; increases
  - D) does not change; perhaps changes but we can't say if it increases, decreases, or stays the same
  - E) rises; perhaps changes but we can't say if it increases, decreases, or stays the same

Answer: E

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 85) The demand for cat food decreases while the supply increases. The equilibrium price of cat food \_\_\_\_\_, and the equilibrium quantity \_\_\_\_\_.
- A) does not change; increases
  - B) rises; decreases
  - C) falls; perhaps changes but we can't say if it increases, decreases, or stays the same
  - D) rises; perhaps changes but we can't say if it increases, decreases, or stays the same
  - E) falls; increases

Answer: C

Topic: Effects of a decrease in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

86) Suppose the government imposes a small carbon tax on automakers. But the price of gasoline has doubled due to a Middle East crisis which has reduced oil production. In the market for autos, these changes mean that supply and demand have both changed with the effect on the demand larger than the effect on the supply. The result is that the price of autos will \_\_\_\_\_ and the number of autos sold will \_\_\_\_\_.

- A) rise; perhaps change but we can't say if it increases, decreases, or stays the same
- B) rise; increase
- C) rise; decrease
- D) fall; perhaps change but we can't say if it increases, decreases, or stays the same
- E) fall; decrease

Answer: E

Topic: Effects of a decrease in demand and a decrease in supply

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

87) If both producers and consumers believe that a product's price will rise in the future, then at the present, demand \_\_\_\_\_ and supply \_\_\_\_\_.

- A) increases; increases
- B) decreases; decreases
- C) increases; decreases
- D) decreases; increases
- E) does not change; does not change

Answer: C

Topic: Changes in both demand and supply, expected future price

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

88) If both producers and consumers believe that a product's price will rise in the future, then at the present, the equilibrium price

- A) does not change.
- B) rises.
- C) falls.
- D) might rise, fall, or not change, but the change can never be predicted.
- E) might rise, fall, or not change depending on whether the effect from the producers is greater than or less than the effect from the consumers.

Answer: B

Topic: Changes in both demand and supply, expected future price

Skill: Level 4: Applying models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 89) The equilibrium price of a good occurs if the
- A) quantity of the good demanded equals the quantity of the good supplied.
  - B) quantity of the good demanded is greater than the quantity of the good supplied.
  - C) quantity of the good demanded is less than the quantity of the good supplied.
  - D) demand for the good is equal to the supply of the good.
  - E) price of the good seems reasonable to most buyers.

Answer: A

Topic: Market equilibrium

Skill: Level 1: Definition

Section: Checkpoint 4.3

Status: Old

AACSB: Reflective thinking

- 90) If there is a surplus of a good, the quantity demanded is \_\_\_\_\_ the quantity supplied and the price will \_\_\_\_\_.
- A) less than; rise
  - B) less than; fall
  - C) greater than; rise
  - D) greater than; fall
  - E) equal to; fall

Answer: B

Topic: Surplus

Skill: Level 2: Using definitions

Section: Checkpoint 4.3

Status: Old

AACSB: Reflective thinking

91) The graph illustrates the market for bottled water. When the price exceeds the equilibrium price, the quantity demanded is \_\_\_\_\_ the quantity supplied and the price of the good will \_\_\_\_\_.

- A) less than; fall
- B) greater than; rise
- C) greater than; fall
- D) less than; rise
- E) equal to; fall

Answer: A

Topic: Surplus

Skill: Level 2: Using definitions

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

92) Which of the following is correct?

- i. A surplus puts downward pressure on the price of a good.
  - ii. A shortage puts upward pressure on the price of a good.
  - iii. There is no surplus or shortage at equilibrium.
- A) i and ii
  - B) i and iii
  - C) ii and iii
  - D) i, ii, and iii
  - E) only iii

Answer: D

Topic: Surplus, shortage, market equilibrium

Skill: Level 2: Using definitions

Section: Checkpoint 4.3

Status: Old

AACSB: Reflective thinking

93) Which of the following is the best explanation for why the price of gasoline increases during the summer months?

- A) Oil producers have higher costs of production in the summer.
- B) Sellers have to earn profits during the summer to cover losses in the winter.
- C) There is increased driving by families going on vacation.
- D) There is less competition among oil refineries in the summer.
- E) The number of gas stations open 24 hours a day rises in the summer months and so the price must rise to cover the higher costs.

Answer: C

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Reflective thinking

94) The number of people looking to buy ceiling fans increases, so there is an increase in the

- A) quantity of ceiling fans demanded and a surplus of ceiling fans.
- B) demand for ceiling fans and a rise in the price of a ceiling fan.
- C) demand for ceiling fans and a surplus of ceiling fans.
- D) supply of ceiling fans and no change in the price of a ceiling fan.
- E) demand for ceiling fans and in the supply of ceiling fans.

Answer: B

Topic: Effects of an increase in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

95) When the demand for a good decreases, its equilibrium price \_\_\_\_\_ and equilibrium quantity \_\_\_\_\_.

- A) falls; decreases
- B) falls; increases
- C) rises; decreases
- D) rises; increases
- E) falls; does not change

Answer: A

Topic: Effects of a decrease in demand

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 96) A technological improvement lowers the cost of producing corn. As a result, the price of a pound of corn \_\_\_\_\_ and the quantity of corn \_\_\_\_\_.
- A) rises; increases
  - B) rises; decreases
  - C) falls; increases
  - D) falls; decreases
  - E) falls; does not change

Answer: C

Topic: Effects of an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 99) Suppose that the price of lettuce used to produce tacos increases. This change means that the equilibrium price of a taco \_\_\_\_\_ and the equilibrium quantity \_\_\_\_\_.
- A) rises; increases
  - B) rises; decreases
  - C) falls; increases
  - D) falls; decreases
  - E) does not change; decreases

Answer: B

Topic: Effects of a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 100) Suppose a medical study reveals new benefits to consuming beef and at the same time a bumper corn crop reduces the cost of feeding steers. The equilibrium quantity of beef will
- A) decrease.
  - B) perhaps increase, decrease, or stay the same, but more information is needed to determine which it does.
  - C) stay the same.
  - D) increase.
  - E) definitely either stay the same or decrease.

Answer: D

Topic: Effects of an increase in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 101) Candy makers accurately anticipate the increase in demand for candy for Halloween so that the supply of candy and demand for candy increase the same amount. As a result, the price of candy \_\_\_\_\_ and the quantity of candy \_\_\_\_\_.
- A) rises; does not change
  - B) falls; increases
  - C) does not change; increases
  - D) does not change; does not change
  - E) rises; increases

Answer: C

Topic: Effects of an increase in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 102) The graph illustrates the market for British pounds, the currency of the United Kingdom. As the number of buyers of pounds increases and the number of sellers of pounds increases, the equilibrium price of a pound
- A) will rise.
  - B) will fall
  - C) will remain the same.
  - D) might rise, fall, or remain the same depending on whether the effect on buyers is larger than, less than, or the same as the effect on sellers.
  - E) None of the above answers is correct.

Answer: D

Topic: *Effects of an increase in demand and an increase in supply*

Section: *Checkpoint 4.3*

Status: *Old*

AACSB: *Analytical thinking*

- 103) The graph illustrates the market for computers. If the number of buyers of computers increases and technology advances, you predict that the
- A) equilibrium quantity of computers will increase.
  - B) equilibrium quantity of computers will decrease.
  - C) equilibrium price of a computer will rise.
  - D) equilibrium price of a computer will fall.
  - E) equilibrium quantity of computers might increase, decrease, or not change.

Answer: A

Topic: Effects of an increase in demand and an increase in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 104) Which of the following definitely results in a product's equilibrium price rising?
- A) an increase in both demand and supply
  - B) a decrease in both demand and supply
  - C) an increase in demand combined with a decrease in supply
  - D) a decrease in demand combined with an increase in supply
  - E) an increase in the supply combined with no change in the demand

Answer: C

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

105) During 2008 the supply of gasoline decreased while at the same time the demand for gasoline increased. If the magnitude of the increase in demand was greater than the magnitude of the decrease in supply, then the equilibrium price of gasoline \_\_\_\_\_ and the equilibrium quantity \_\_\_\_\_.

- A) increased; increased
- B) increased; decreased
- C) increased; did not change
- D) decreased; did not change
- E) did not change; increased

Answer: A

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

106) The graph illustrates the market for British pounds, the currency of the United Kingdom. As the number of buyers of pounds decreases and the number of sellers of pounds increases, the equilibrium price of a pound

- A) will rise.
- B) will fall
- C) will remain the same.
- D) might rise, fall, or remain the same but more information is needed.
- E) will rise if the magnitude of the effect on the buyers is larger than the magnitude of the effect on the sellers.

Answer: B

Topic: Effects of a decrease in demand and an increase in supply

## 4.4 Integrative Questions

- 1) Consider the market for bread. If the price of wheat rises, then the
- A) demand curve for bread shifts leftward.
  - B) supply curve of bread shifts leftward.
  - C) price of bread falls.
  - D) equilibrium quantity of bread increases.
  - E) demand curve for bread shifts rightward.

Answer: B

Topic: Integrative

Skill: Level 3: Using models

Section: Integrative

Status: Old

AACSB: Reflective thinking

- 2) Consider the market for turkeys. In the United States, because of Thanksgiving in the month of November,
- A) there is a downward movement along the demand curve for turkeys.
  - B) there is an upward movement along the supply curve for turkeys.
  - C) the supply curve of turkeys shifts leftward.
  - D) the demand curve for turkeys shifts leftward.
  - E) neither the demand curve nor the supply curve shift; instead there is a movement along both curves.

Answer: B

Topic: Integrative

Skill: Level 3: Using models

Section: Integrative

Status: Old

AACSB: Reflective thinking

- 3) Consider the market for feather pillows. If there is an increase in the price of feather dusters, a substitute in production for feather pillows, then
- A) the price of feather pillows decreases.
  - B) the demand curve for feather pillows shifts leftward.
  - C) the supply curve for feather pillows shifts leftward.
  - D) there is a downward movement along the demand curve for feather pillows.
  - E) the demand curve for feather pillows shifts rightward.

Answer: C

Topic: Integrative

AACSB: Reflective thinking

- 4) Consider the market for peanut butter. If there is an increase in the price of peanuts,
- A) there is an upward movement along the supply curve for peanut butter.
  - B) the supply curve for peanuts shifts rightward.
  - C) there is a decrease in the supply of peanuts.
  - D) there is a decrease in the supply of peanut butter.
  - E) there is a decrease in the demand for peanut butter.

Answer: D

Topic: Integrative

Skill: Level 3: Using models

Section: Integrative

Status: Old

AACSB: Reflective thinking

- 5) Peanut butter and jelly are complements for many consumers. Consider the market for peanut butter. If there is an increase in the price of jelly,
- A) there is a movement along the supply curve of peanut butter.
  - B) the price of peanut butter rises.
  - C) the quantity of peanut butter increases.
  - D) there is a shift in the supply curve for jelly.
  - E) the demand curve for peanut butter does not shift; instead there is a movement along it.

Answer: A

Topic: Integrative

Skill: Level 3: Using models

Section: Integrative

Status: Old

AACSB: Reflective thinking

- 6) Consider the market for wheat. If there is an improvement in harvesting technology,
- A) the supply curve for wheat shifts rightward.
  - B) the demand curve for wheat shifts rightward.
  - C) there is a movement up along the demand curve.
  - D) the equilibrium price rises.
  - E) the demand curve for wheat shifts leftward.

Answer: A

Topic: Integrative

Skill: Level 3: Using models

Section: Integrative

Status: Old

AACSB: Reflective thinking

- 7) Consider the market for camera film. If more people start using digital cameras, which do not require film,
- A) the supply curve of film shifts rightward.
  - B) the demand curve for film shifts leftward.
  - C) there is a movement up along the demand curve for film.
  - D) there is a movement down along the demand curve for film.
  - E) neither the demand curve nor the supply curve for film shifts; instead there is a movement along both.

## 4.5 Essay: Demand

- 1) What is the law of demand?

Answer: The law of demand states that other things remaining the same, if the price of a good rises, the quantity demanded of that good decreases, and if the price of a good falls, the quantity demanded of that good increases.

Topic: Law of demand

Skill: Level 1: Definition

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 2) What leads to a decrease in the quantity demanded of a good or service?

Answer: The quantity demanded of a good or service decreases when the price of the product increases.

Topic: Law of demand

Skill: Level 1: Definition

Section: Checkpoint 4.1

Status: Old

AACSB: Reflective thinking

- 3) Explain the difference between a change in demand and a change in quantity demanded. What leads to each of these changes?

Answer: A change in demand occurs when consumers will buy more or less of a product at every price; a change in the quantity demanded occurs when the price changes and consumers buy more or less. A change in demand is reflected by a shift of the entire demand curve, while a change in the quantity demanded is reflected by a movement along one demand curve.

Only a change in the price of the good brings about a change in the quantity demanded. A change in demand is brought about by a change in any of the other influences on demand, namely, the prices of related goods, income, expectations, the number of buyers, and preferences.

*Topic: Changes in quantity demanded versus change in demand*

*Skill: Level 1: Definition*

*Section: Checkpoint 4.1*

*Status: Old*

*AACSB: Written and oral communication*

- 4) List the factors that change demand and shift the demand curve. Tell what happens to demand and the demand curve when there is an increase in the factor.

Answer: One factor that changes demand is a change in income. An increase in income increases demand and shifts the demand curve rightward for a normal good. An increase in income decreases demand and shifts the demand curve leftward for an inferior good. A change in the price of a substitute or complement also changes demand. An increase in the price of a substitute increases demand and shifts the demand curve rightward while an increase in the price of a complement decreases demand and shifts the demand curve leftward. Expectations, the number of buyers, and preferences also change demand. If people expect their income to increase, or if they expect its price to be higher in the future, or if the number of buyers increases, or if people's preferences for the good increase, demand increases and the demand curve shifts rightward.

*Topic: Changes in demand*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 4.1*

*Status: Old*

*AACSB: Written and oral communication*

- 5) Computers are a complement to computer software. Suppose the price of a computer falls. How does this fall in price affect the demand for computer software and the demand curve for computer software?

Answer: The fall in the price of a complement increases the demand for a product. Hence the fall in the price of a computer increases the demand for computer software and shifts the demand curve for computer software rightward.

*Topic: Changes in demand, price of a complement*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.1*

*Status: Old*

*AACSB: Written and oral communication*

- 6) What is the difference between a normal good and an inferior good? Give an example of each.

Answer: A good is a normal good if an increase in incomes leads to an increase in demand for a good. Most goods are normal goods. An example of a normal good is new clothes. A good is an inferior good if an increase in income leads to a decrease in demand for the good. Second-hand clothing that can be purchased at thrift stores is an inferior good.

Topic: Normal and inferior goods

Skill: Level 2: Using definitions

Quantity Demanded (gallons of ice cream per year)			
Price (dollars per gallon of ice cream)	<u>Katie</u>	<u>Mark</u>	<u>Bobby</u>
6	3	5	0
5	4	7	1
4	6	9	2
3	7	10	3

- 7) Suppose Katie, Mark, and Bobby are the only consumers in the market for ice cream. Using the demand schedules in the table above, what is the market demand curve for ice cream?

Answer:

Price (dollars per gallon of ice cream)	Quantity demanded (gallons of ice cream per year)
6	8
5	12
4	17
3	20

Topic: Market demand

Skill: Level 3: Using models

*Section: Checkpoint 4.1*

*Status: Old*

*AACSB: Analytical thinking*

## 4.6 Essay: Supply

- 1) What leads to a decrease in the quantity supplied of a good or service?

Answer: The quantity supplied of a good or service decreases when the price of the good or service decreases.

*Topic: Quantity supplied*

*Skill: Level 1: Definition*

*Section: Checkpoint 4.2*

*Status: Old*

*AACSB: Reflective thinking*

2) What is the difference between quantity supplied and supply?

Answer: Quantity supplied is the amount that people are willing to sell during a specific period for a specific price. It deals with one quantity at one price. Supply is the relationship between the quantity supplied and the price of the good. Supply applies to various prices and various quantities.

*Topic: Changes in quantity supplied versus change in supply*

*Skill: Level 1: Definition*

*Section: Checkpoint 4.2*

*Status: Old*

*AACSB: Reflective thinking*

3) List the factors that change supply and shift the supply curve. Tell what happens to supply and the supply curve when there is an increase in the factor.

Answer: The factors that change supply are productivity, the number of sellers, expectations, prices of resources, and prices of related goods. An increase in productivity, an increase in the price of a complement in production, a decrease in expected future prices, and an increase in the number of sellers all lead to an increase in supply and a rightward shift in the supply curve. An increase in the price of a substitute in production or an increase in the prices of inputs leads to a decrease in supply and a leftward shift in the supply curve.

*Topic: Changes in supply*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 4.2*

*Status: Old*

*AACSB: Written and oral communication*

4) What are substitutes in production?

Answer: Goods are substitutes in production when one can be produced in place of the other, that is, when the goods are produced using the same resources.

*Topic: Substitutes in production*

*Skill: Level 1: Definition*

*Section: Checkpoint 4.2*

*Status: Old*

*AACSB: Reflective thinking*

5) Suppose that the number of companies selling computer software decreases. How does this change affect the supply of computer software and the supply curve of computer software?

Answer: A decrease in the number of sellers decreases the supply. Hence the decrease in the number of companies selling computer software decreases the supply of computer software and shifts the supply curve of computer software leftward.

*Topic: Changes in supply, number of sellers*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.2*

*Status: Old*

*AACSB: Reflective thinking*

- 6) Suppose that the productivity used to produce computers advances. How does this change affect the supply of computers and the supply curve of computers?

Answer: An advance in productivity increases the supply of computers. Hence increases in productivity shift the supply curve of computers rightward.

Topic: *Changes in supply, productivity*

Skill: *Level 3: Using models*

Section: *Checkpoint 4.2*

Status: *Old*

AACSB: *Reflective thinking*

Price (dollars per half gallon)	Quantity supplied		
	Ben & Jerry's	Haagen Dazs	Edy's
6	18	30	10
5	14	25	8
4	10	20	6

- 7) The table above indicates how many thousands of containers of ice cream three different companies are willing to produce at different prices. Does this information reflect the law of supply? Why or why not?

Answer: Yes, the information in the table is in accord with the law of supply because for all three companies, as the price rises (falls), the quantity supplied increases (decreases).

Topic: *Law of supply*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 4.2*

Status: *Old*

AACSB: *Reflective thinking*

Price (dollars per manicure)	Quantity supplied (manicures per day)	
	Nancy's Nails	Fancy Nails
10	5	10
15	10	16
20	14	20
25	16	23

- 8) The table above shows supply schedules for the two nail salons in town, Nancy's Nails and Fancy Nails. What is the market supply of manicures?

Answer:

Price (dollars per manicure)	Quantity supplied (manicures per day)
10	15
15	26
20	34
25	39

Topic: *Market supply*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 4.2*

Status: *Old*

## 4.7 Essay: Market Equilibrium

### 1) When does a shortage occur?

Answer: A shortage occurs when the price is below the equilibrium price. When the price is less than the equilibrium price, the quantity demanded is greater than the quantity supplied.

*Topic: Shortage*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Reflective thinking*

### 2) When does a surplus occur?

Answer: A surplus occurs when the price is above the equilibrium price. When the price exceeds the equilibrium price, the quantity supplied is greater than the quantity demanded.

*Topic: Surplus*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Reflective thinking*

### 3) At prices above the equilibrium price, what occurs?

Answer: If the price exceeds the equilibrium price, there is a surplus because the quantity supplied exceeds the quantity demanded. With a surplus, the law of market forces points out that the price will fall. As the price falls, the quantity supplied decreases and the quantity demanded increases, thus decreasing the size of the surplus. The price will continue to fall as long as there is a surplus, that is, as long as the price exceeds the equilibrium price. Ultimately the price will fall to equal the equilibrium price, at which time the surplus will be eliminated and the price will no longer change.

*Topic: Surplus*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Written and oral communication*

### 4) When the demand for blue jeans increases, what happens next?

Answer: If the demand for blue jeans increases, then at all prices buyers are more willing and more able to buy blue jeans. The demand curve for blue jeans shifts rightward. With the curve shifts, at the initial price a shortage of jeans will emerge. The law of market forces drives the price higher. Hence an increase in demand for blue jeans leads to a rise in the price of a pair of blue jeans and an increase in the quantity of blue jeans.

*Topic: Effects of a change in demand*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Written and oral communication*

- 5) Suppose Ramen noodles, an inexpensive but a quite tasty dish, are an inferior good. Why do grocery stores in college towns, that is, towns with a large fraction of college students, stock a lot of Ramen noodles?

Answer: Generally, college students' incomes are relatively low because they cannot hold high paying, full-time jobs. Hence the demand for inferior goods is strong in college towns. Hence the demand curve for Ramen noodles in a college town lies to the right of the demand curve for Ramen noodles in a similar size town not dominated by a college. Thus the equilibrium quantity of Ramen noodles is quite large in a college town and so stores stock a lot of Ramen noodles.

*Topic: Effects of a change in demand*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Written and oral communication*

- 6) Why does an increase in supply lead to lower prices?

Answer: When the supply of a good, such as computers, increases, the supply curve shifts rightward. This shift means sellers are more willing and more able to sell computers at all prices than they were before. When this change occurs, a surplus of computers breaks out. With the surplus, the law of market forces drives the price lower and thereby eliminates the surplus.

*Topic: Effects of a change in supply*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Written and oral communication*

- 7) Smart phones are becoming less expensive as new technology reduces the cost of production. In a supply and demand model, explain the effects of the technological innovations and their effect on the quantity of smart phones.

Answer: Advances in technology increase the supply of smart phones and the supply curve of smart phones shifts rightward. The demand curve does not shift. Rather, on the demand side there is an increase in quantity demanded, or movement along the curve, in response to the falling price. The equilibrium price of a smart phone falls and the equilibrium quantity of smart phones increases.

*Topic: Effects of a change in supply*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Written and oral communication*

- 8) What is the effect on the price and quantity of a product if both the demand and supply simultaneously increase?

Answer: The equilibrium quantity unambiguously increases. The effect on the equilibrium price is ambiguous. The equilibrium price rises if the increase in demand exceeds the increase in supply. The equilibrium price falls if the increase in supply exceeds the increase in demand. The equilibrium price is unchanged if the increase in demand equals the increase in supply.

*Topic: Effects of an increase in demand and an increase in supply*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Analytical thinking*

- 9) What is the effect on the price and quantity of a product if the demand decreases and the supply simultaneously increases?

Answer: The equilibrium price unambiguously falls. The effect on the equilibrium quantity is ambiguous. The equilibrium quantity decreases if the decrease in demand exceeds the increase in supply. The equilibrium quantity increases if the increase in supply exceeds the decrease in demand. The equilibrium quantity is unchanged if the decrease in demand equals the increase in supply.

*Topic: Effects of a decrease in demand and an increase in supply*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Analytical thinking*

- 10) For consumers, computers are a complement to computer software. Suppose the price of a computer falls. Simultaneously, suppose that the number of companies selling computer software decreases. How do these changes affect the price and quantity of computer software?

Answer: The fall in the price of a computer increases the demand for computer software and the demand curve for computer software shifts rightward. A decrease in the number of sellers decreases the supply of computer software and shifts the supply curve of computer software leftward. The increase in demand and decrease in supply both raise the price, so the price definitely rises. The increase in demand increases the quantity and the decrease in supply decreases the quantity. Hence the net effect on the quantity is ambiguous.

*Topic: Effects of an increase in demand and a decrease in supply*

*Skill: Level 3: Using models*

*Section: Checkpoint 4.3*

*Status: Old*

*AACSB: Analytical thinking*

- 11) In early 2012 the price of computer hard disc drives rose. In a demand and supply model, shifts in what curve or curves could have brought about the higher price?

Answer: The higher price could have been brought about by an increase in demand, a decrease in supply, or the combination of an increase in demand combined with a decrease in supply. Hence the higher price could have been the result of a rightward shift in the demand curve, a leftward shift in the supply curve, or a combined rightward shift of the demand curve and leftward shift of the supply curve.

Topic: Effects of an increase in demand and a decrease in supply

Skill: Level 3: Using models

Section: Checkpoint 4.3

Quantity demanded (tons of cat food per year)	Price (dollars per pound of cat food)	Quantity supplied (tons of cat food per year)
52	1.00	15
46	1.50	26
43	2.00	34
40	2.50	40
35	3.00	44

- 12) The above table gives the demand and supply schedules for cat food. If the price is \$3.00 per pound of cat food, will there be a shortage, a surplus, or is this price the equilibrium price? If there is a shortage, how much is the shortage? If there is a surplus, how much is the surplus? If \$3.00 is the equilibrium price, what is the equilibrium quantity?

Answer: At a price of \$3.00 per pound of cat food, there is a surplus. The surplus equals 44 tons (the quantity supplied) minus 35 tons (the quantity demanded), or 9 tons of cat food.

Topic: Surplus

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 13) The above table gives the demand and supply schedules for cat food. If the price is \$1.00 per pound of cat food, will there be a shortage, a surplus, or is this price the equilibrium price? If there is a shortage, how much is the shortage? If there is a surplus, how much is the surplus? If \$3.00 is the equilibrium price, what is the equilibrium quantity?

Answer: At a price of \$1.00 per pound of cat food, there is a shortage. The shortage equals 52 tons (the quantity demanded) minus 15 tons (the quantity supplied), or 37 tons of cat food.

Topic: Shortage

Skill: Level 3: Using models

Section: Checkpoint 4.3

Status: Old

AACSB: Analytical thinking

- 14) The above table gives the demand and supply schedules for cat food. What is the equilibrium price and quantity?

Answer: The equilibrium price is \$2.50 per pound of cat food because that is the price at which the quantity demanded equals the quantity supplied. The equilibrium quantity of cat food is 40 tons per year.

*Topic: Equilibrium price and quantity*

*Skill: Level 3: Using models*

AACSB: Reflective thinking

- 2) In 2011, U.S. GDP was
- A) \$15 trillion using the expenditure approach.
  - B) \$15 trillion using the income approach.
  - C) \$15 trillion using the expenditure approach and \$14 trillion using the income approach.
  - D) \$16 trillion using the income approach and \$14 trillion using the expenditure approach.
  - E) both A and B are correct.

Answer: E

Topic: *Measuring GDP*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 5.2*

Status: *Old*

AACSB: *Reflective thinking*

- 3) The expenditure approach to measuring GDP is done by using data on only
- A) consumption expenditure.
  - B) consumption expenditure and investment.
  - C) consumption expenditure, investment, government expenditure on goods and services, and net exports of goods and services.
  - D) consumption expenditure, investment, and government expenditures.
  - E) wages, rent, interest, and profit.

Answer: C

Topic: *Expenditure approach*

Skill: *Level 1: Definition*

Section: *Checkpoint 5.2*

Status: *Old*

AACSB: *Reflective thinking*

- 4) In comparing the magnitudes of the components of GDP according to the expenditure approach, we see that in the United States
- A) government expenditure on goods and services is the largest category.
  - B) investment is the largest category.
  - C) investment is much larger than government expenditure on goods and services.
  - D) investment is less than government expenditure on goods and services.
  - E) investment, government expenditure on goods and services, and consumption expenditure are all about the same size.

Answer: D

Topic: *Expenditure approach*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 5.2*

Status: *Old*

AACSB: *Reflective thinking*

- 5) The largest expenditure category in the United States is
- A) consumption expenditure.
  - B) investment.
  - C) government expenditure on goods and services.
  - D) net exports of goods and services.
  - E) wages.

Answer: A

Topic: Expenditure approach

Skill: Level 1: Definition

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 6) If consumption was 70 percent of GDP and investment and government expenditure were both 18 percent each, then we see that
- A) GDP can be over 100 percent because it is "gross" rather than "net."
  - B) the error is due to rounding.
  - C) exports must be less than imports.
  - D) exports must be more than imports.
  - E) we must subtract depreciation from investment so that the components of GDP do not exceed 100 percent.

Answer: C

Topic: Expenditure approach

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 7) In recent years, which of the following has been negative?
- A) consumption expenditure
  - B) investment
  - C) government expenditure on goods and services
  - D) net exports of goods and services
  - E) wages

Answer: D

Topic: Expenditure approach

Skill: Level 1: Definition

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 8) In 2009 in the United States, consumption expenditure was \$9,996 billion, investment was \$1,559 billion, government expenditures on goods and services were \$2,927 billion, and total exports were \$1,492 billion. GDP equaled
- A) \$12,641 billion.
  - B) \$10,120 billion.
  - C) \$11,488 billion.
  - D) \$14,415 billion.
  - E) some amount, but there is not enough information given to calculate GDP.

Answer: E

Topic: Expenditure approach

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

- 9) The following table reports transactions that occurred in Whoville. Nominal GDP in Whoville is \_\_\_\_\_.

Item	Price per Unit	Quantity
Bottles of French Wine	\$20	10
Boxes of Cereal	\$4	20
Used Tires	\$15	5
Shares of Twitter Stock	\$10	15
Hours of Swimming Lessons	\$5	8

- A) \$320      B) \$545      C) \$120      D) \$395      E) \$195

Answer: C

Topic: Expenditure approach

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: New

AACSB: Analytical thinking

Item	Billions of dollars
Consumption expenditure	7,500
Investment	1,300
Government expenditure on goods and services	1,400
Net exports of goods and services	-200

- 10) Based on the data in the table above, what does GDP equal?

- A) \$10,200 billion
- B) \$10,400 billion
- C) \$10,000 billion
- D) \$9,800 billion
- E) \$8,900 billion

Answer: C

Topic: Expenditure approach

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

Item	Billions of dollars
Consumption expenditure	4,000
Interest, rent, and profit	300
Investment	1,000
Depreciation	400
Government expenditure on goods and services	1,000
Net exports of goods and services	200

11) The table gives data for a nation. What is the amount of the country's GDP?

- A) \$6,000 billion
- B) \$6,200 billion
- C) \$6,600 billion
- D) \$6,900 billion
- E) \$5,800 billion

Answer: B

Topic: Expenditure approach

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

12) The table gives data for a nation. The value of the country's net exports of goods and services shows that the country's

- A) value of its exports exceeded the value of its imports.
- B) value of its imports are negative.
- C) net exports of goods and services are decreasing.
- D) value of its imports exceeded the value of its exports.
- E) value of its imports must equal zero.

Answer: A

Topic: Expenditure approach, net exports of goods and services

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

13) The value of used goods \_\_\_\_\_ counted as part of GDP \_\_\_\_\_.

- A) are; as long as they are classified as consumption goods
- B) are; as long as they are classified as investment goods
- C) are not; because they were counted during the period when they were counted as new goods
- D) are not; because most fall in value and would cause a decrease in the value of GDP
- E) may be; as long as their value has risen

Answer: C

Topic: Expenditures not in GDP, used goods

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 14) If the purchase of used goods was to be incorporated into measuring GDP using the expenditure approach, then
- A) we also will have to account for spending on financial assets.
  - B) it will be very difficult to assign a fair market value to a used good.
  - C) we will be counting the value of the used goods both at the time of their production and at the time of their re-sale.
  - D) we will have to account for the natural depreciation that a used good experiences.
  - E) consumption spending would need to be adjusted for depreciation.

Answer: C

Topic: Expenditures not in GDP, used goods

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 15) When calculating GDP, purchases of used goods are
- A) included at the original price.
  - B) included by taking the original price and subtracting the (current) used price.
  - C) included at the (current) used price.
  - D) not included.
  - E) included at the original price minus any depreciation.

Answer: D

Topic: Expenditures not in GDP, used goods

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 16) If you buy a five-year-old TV from a friend, the amount you paid for the TV is
- A) always added to consumption expenditures but not investment.
  - B) always added to investment but not consumption.
  - C) not included in this year's GDP.
  - D) added to investment if the TV is expected to last more than 5 additional years and added to consumption if the TV is expected to last less than 5 additional years.
  - E) included in this year's GDP only if the TV set was manufactured in the United States.

Answer: C

Topic: Expenditures not in GDP, used goods

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 17) When Jamie purchases a classic 1968 Plymouth Cuda convertible from Shane, GDP
- A) does not change, because the car was not produced this year.
  - B) increases, because the car is a durable good and increases consumption.
  - C) increases, because the car is a durable good and increases investment.
  - D) does not change, because Jamie did not buy the car from a dealership.
  - E) increases, because this expenditure decreases saving.

Answer: A

Topic: Expenditures not in GDP, used goods

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 18) Spending on financial assets \_\_\_\_\_ counted as part of GDP \_\_\_\_\_.
- A) are; because the cash exchanged represents an expenditure
  - B) are not; because their purchase is not spending on goods or services
  - C) are; as long as their purchase produces income
  - D) are not; because interest must be paid on them
  - E) may be; as long as their value increases

Answer: B

Topic: Expenditures not in GDP, financial assets

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 19) The purchase of 500 shares of Honda stock by the California State Employees' Pension fund
- A) is counted as consumption expenditure.
  - B) is not counted as part of GDP.
  - C) is counted as investment in the GDP accounts.
  - D) is counted as part of export expenditure in the GDP accounts because Honda is a foreign firm.
  - E) is counted as part of import expenditure in the GDP accounts because Honda is a foreign firm.

Answer: B

Topic: Expenditures not in GDP, financial assets

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Reflective thinking

- 20) Recently, the government made adjustments to how GDP is calculated that included placing software purchases into the category of
- A) intermediate goods because software is not a final good.
  - B) inventory and now software purchases are not directly counted as part of GDP.
  - C) investment and now directly counts software purchases as part of GDP.
  - D) net exports of goods and services because most software is written abroad.
  - E) net operating surplus.

Answer: C

Topic: *Eye on the U.S. economy, is a computer program an intermediate good?*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 5.2*

Status: *Old*

AACSB: *Reflective thinking*

- 21) Which of the following is true regarding the measurement of GDP?
- A) Wages and profit income are used in the income approach to GDP.
  - B) Wages and consumption are used in the expenditure approach to GDP.
  - C) Consumption and investment are used in the income approach to GDP.
  - D) Government expenditure is only counted in the income approach to GDP.
  - E) Investment and wages are expenditures, and are therefore are used in the expenditure approach to GDP.

Answer: A

Status: Old

AACSB: Reflective thinking

- 55) Bobby was researching the economic growth of a country between 2006 and 2011. Using 2006 as the base year, he calculated a twelve percent increase for real GDP and a ten percent increase for nominal GDP. His results indicate that
- A) he made an error when calculating nominal GDP.
  - B) the quantity of goods and services produced decreased over the period.
  - C) the quantity of goods and services produced increased and prices decreased over the period.
  - D) the quantity of goods and services produced and prices both decreased over the period.
  - E) the quantity of goods and services produced did not change and prices decreased over the period.

Answer: C

Topic: Real GDP versus nominal GDP

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

- 56) If real GDP is greater than nominal GDP for a particular year, then
- A) production must have fallen between the current year and the base year.
  - B) production must have increased between the current year and the base year.
  - C) prices must have fallen between the current year and the base year.
  - D) prices must have risen between the current year and the base year.
  - E) prices must have fallen between the current year and the immediate past year.

Answer: C

Topic: Real GDP versus nominal GDP

Skill: Level 3: Using models

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

- 57) During last year, a country produced 20,000 pizzas and 10,000 hamburgers and nothing else. The pizzas sold for \$10.00 each and the hamburgers for \$3.00 each. Nominal GDP was
- A) \$230,000.      B) \$70,000.      C) \$460,000.      D) \$390,000.      E) \$360,000.

Answer: A

Topic: Nominal GDP

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

- 58) The base year is 2010. A country only produces MP3 players. The price of an MP3 player in 2008 was \$50. The price of an MP3 player was \$30 in 2010. The quantity of MP3 players produced in 2008 was 10,000 units and in 2010 was 20,000 units. Nominal GDP in 2010 equals
- A) \$1,000,000.
  - B) \$500,000.
  - C) \$600,000.
  - D) \$200,000.
  - E) an amount that cannot be determined without information about real GDP in 2010.

Answer: C

Topic: Nominal GDP

Skill: Level 2: Using definitions

Section: Checkpoint 5.2

Status: Old

AACSB: Analytical thinking

- 59) The base year is 2011. A country only produces Blu-ray players. The price of a Blu-ray player in 2011 was \$100. The price of a Blu-ray player was \$90 in 2012. The quantity of Blu-ray players produced in 2011 was 10,000 units and in 2012 was 10,500 units. Nominal GDP in 2012 equals
- A) \$900,000.
  - B) \$945,000.
  - C) \$1,000,000.
  - D) \$1,050,000.
  - E) an amount that cannot be determined without information about nominal GDP in 2008.

Answer: B

Topic: Nominal GDP

### 5.3 The Use and Limitations of Real GDP

1) GDP is

- A) a perfect measure of the standard of living.
- B) a perfect measure of the value of production.
- C) a measure which includes the value of all newly produced goods and services.
- D) an imperfect measure of the standard of living.
- E) the only factor that affects our standard of living.

Answer: D

Topic: *Standard of living*

Skill: *Level 1: Definition*

Section: *Checkpoint 5.3*

Status: *Old*

AACSB: *Reflective thinking*

2) Even though it is not a perfect measure, economists can use real GDP to

- i. compare how the value of the goods and services produced in China have changed over the past 10 years.
  - ii. look at the length of recessions and expansions in the United States.
  - iii. compare the standard of living in China versus the standard of living in Vietnam.
- A) ii only
  - B) i, ii and iii
  - C) i and iii
  - D) i and ii
  - E) ii and iii

Answer: B

Topic: *Standard of living*

Skill: *Level 2: Using definitions*

Section: *Checkpoint 5.3*

Status: *Old*

AACSB: *Reflective thinking*

3) Although imperfect, which of the following is used as a measure of the standard of living?

- A)  $\text{real GDP} \div \text{population}$
- B)  $\text{real GDP} \times \text{population}$
- C)  $\text{nominal GDP} \times \text{population}$
- D)  $\text{nominal GNP} \div \text{population}$
- E)  $\text{nominal GNP} \times \text{population}$

Answer: A

- 34) Babysitting services the oldest son provides his parents
- A) counts as nominal GDP but not real GDP.
  - B) counts as real GDP but not nominal GDP.
  - C) counts as real GDP and nominal GDP.
  - D) does not count as real GDP nor nominal GDP.
  - E) counts in both real and nominal GDP only if the son is not paid.

Answer: D

Topic: Household production

Skill: Level 2: Using definitions

Section: Checkpoint 5.3

Status: Old

AACSB: Reflective thinking

- 35) As more women decide to work outside the home and therefore hire others to work around their home, GDP will increase by
- A) only the value of the output produced by the newly working women.
  - B) the value of the output produced by the newly working women minus the value of the household work they were previously performing.
  - C) the value of the output produced by the newly working women plus the value of any household work they are now hiring someone to perform.
  - D) only the value of the household work they are now hiring someone to perform.
  - E) the value of the household work they were previously performing minus the value of the output produced by the newly working women.

Answer: C

Topic: Household production

AACSB: Reflective thinking

- 36) Instead of taking the dirty laundry with you when you go back to visit your parents, you use a Laundromat. Your use of the Laundromat means that
- A) GDP will decrease and the country's standard of living will fall.
  - B) your parents' contribution to GDP will increase.
  - C) GDP will remain the same.
  - D) what you paid for use of the Laundromat will be included in GDP.
  - E) real GDP does not change because the clothes are still being laundered but nominal GDP rises since you are now paying for the service.

Answer: D

Topic: Household production

Skill: Level 2: Using definitions

Section: Checkpoint 5.3

Status: Old

AACSB: Reflective thinking

- 37) If you mow the lawn yourself, the lawn mowing is considered household production. If you pay Larry's Lawn Service to mow your lawn, the lawn mowing is considered
- A) a leisure time activity.
  - B) a service, that will be counted as part of GDP.
  - C) a service, but is not counted as part of GDP because it simply replaces a service you used to perform.
  - D) rent, and therefore is counted as part of GDP.
  - E) underground production because it replaces the underground production of you mowing your lawn.

Answer: B

## 5.6 Essay: GDP, Income, and Expenditure

### 1) Define and discuss GDP.

Answer: GDP is the market value of all final goods and services produced within a country in a given time period. Only final goods and services are included. Goods produced as intermediate goods are excluded. The goods and services must be produced within the time period under consideration and so sales of used goods are excluded. The goods and services also are those produced within the country, so production by the country's firms that takes place in a foreign nation is not included.

*Topic: GDP*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

### 2) Is every product produced in the United States included in U.S. gross domestic product?

Answer: No, not every product produced is included in U.S. GDP. For instance, goods produced as intermediate goods are excluded. Only *final* goods and services are included. In addition, GDP counts only goods traded in markets, so goods and services that people produce for their own use are excluded.

*Topic: GDP*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

### 3) Define and distinguish between final goods and intermediate goods.

Answer: Final goods are those goods that are purchased by their final user. Essentially, these goods (and services) have been completed and do not need to go through further processes of completion. Examples of final goods include restaurant meals, lamps, railroad engines, and books. Intermediate goods and services are goods or services produced by one firm, bought by another, and then used as a component in the manufacture of another good or service. Basically, intermediate goods and services are used as a part of another good or service. Lumber used by a carpenter to build a table is an example of an intermediate good.

*Topic: Final and intermediate goods*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

4) What are the categories of total expenditure?

Answer: There are four categories: Consumption expenditure, spending by households; investment, spending by firms to buy new capital equipment or add to inventories; government expenditure on goods and services, spending by all levels of the government to buy goods and services; and net exports of goods and services, which equals the exports of goods and services minus the imports of goods and services.

*Topic: Expenditure*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

5) Investment, as included in GDP, consists of what?

Answer: Investment is the purchase of new capital goods such as tools, instruments, machines, buildings, and other constructions and additions to inventories. Investment does *not* include the purchase or sale of stocks and bonds.

*Topic: Investment*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

6) "The amount of new stocks and bonds issued in a year adds to the country's GDP." Is this assertion correct or incorrect? Explain your answer.

Answer: The assertion is incorrect. Stocks and bonds are not counted in the country's GDP. GDP measures the production of final goods and services. Issuing new stocks or bonds does not produce a final good or service and so stocks and bonds are not included in GDP.

*Topic: Investment*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

7) Are stocks and bonds considered part of the investment component of GDP?

Answer: No, stocks and bonds are not part of the investment component of GDP. The investment component of GDP includes the purchase of new capital goods and changes in inventories. Stocks and bonds are not capital goods and are not changes in inventories, so they are not part of investment.

*Topic: Investment*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

8) How are changes in inventory treated in GDP?

Answer: Changes in inventory are part of the investment component of GDP. So, if Dell produces 100,000 computers this year and sells 95,000, the 5,000 unsold computers that are added to Dell's inventory are part of the investment component of GDP for this year.

*Topic: Investment, inventory*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

9) Use the idea of the circular flow diagram to explain why the value of production equals total income equals total expenditure.

Answer: The basic point is that nothing escapes the system. Firms receive the value of their production in the form of revenue. With this revenue, they pay for the factors of production they hire and what is left over after paying their costs is profit. Thus the value of production equals total income. These incomes flow from firms to households. Households then allocate their income to taxes, saving, and consumption. Taxes are collected and spent by the government. Saving by households is spent as investment by firms after being cycled through the banking system. Thus total expenditure equals the value of total income, which equals the value of production by firms.

*Topic: Circular flow*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.1*

*Status: Old*

*AACSB: Written and oral communication*

10) What is the relationship shown by the circular flow among income, total expenditure, and GDP?

Answer: They are all equal. The value of production, which is GDP, equals income because firms pay factors (income) the revenue they receive from selling the goods and services they produce (GDP). Next, the revenue that firms receive from selling the goods and services they produce (GDP) is equal to what is spent as expenditures on the goods and services. (total expenditure).

## 5.7 Essay: Measuring U.S. GDP

- 1) "To calculate GDP, economists begin with total income earned and then subtract total expenditure by the four sectors of the economy." Is the previous sentence true or false? Explain your answer.

Answer: The sentence is false. To calculate GDP, economists can begin with total income and then make a few adjustments but they do *not* subtract total expenditure. Alternatively, economists can sum total expenditure by the economy's four sectors, but this summation is GDP.

*Topic: Measuring GDP*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 2) What are the categories of expenditure used in the expenditure approach to measuring GDP?

Answer: There are four expenditure categories. The expenditure approach calculates the sum of consumption expenditure, investment, government expenditure on goods and services, and net exports of goods and services. Net exports of goods and services are the difference between exports of goods and services and imports of goods and services.

*Topic: Expenditure approach*

*Skill: Level 1: Definition*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 3) The purchase and sale of three types of legal items are not included in this year's GDP. What are these three items?

Answer: The three items are: used goods; financial assets; and, intermediate goods.

*Topic: Expenditures not in GDP*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Reflective thinking*

- 4) Are sales and purchases of used goods counted as part of GDP? Why or why not?

Answer: Sales and purchases of used goods are not counted as part of GDP. GDP measures the production of final goods and services produced within a country in a given time period. So GDP for the United States for 2014 includes the goods and services produced within the United States during 2014. The point is that a used good has *not* been produced within the specified time period. In other words, a used automobile produced in 2012, then in 2014 traded in and resold within the United States was not produced in 2014. Because it was not produced in 2014, it is not a part of the GDP in 2014. (If the automobile was produced within the United States in 2012, the automobile was part of the U.S. GDP in 2012.)

*Topic: Expenditures not in GDP, used goods*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 5) If you sell your textbook to your friend this year, does the sale count in this year's GDP?

Answer: No, the sale would not count in this year's GDP because it is the sale of a used item. The sale of used items is not counted in GDP because GDP measures goods and services produced within a specified time frame. Unless your textbook was produced in this year, it will not count in this year's GDP. And, even if it was produced this year, it has already been included in this year's GDP when it was initially sold as a new textbook.

*Topic: Expenditures not in GDP, used goods*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 6) Explain how the purchases of used goods and of financial assets affect GDP.

Answer: Used goods count in GDP for the year in which they were produced. Hence the purchase of a used good is not included in GDP. Purchases of financial assets, such as stocks, are a transfer of funds and not the purchase of a newly produced good or service. When the firm uses the funds it acquires from selling the stocks or bonds to purchase capital, the purchase of the capital will count as investment, but the initial purchase (and sale) of the financial asset itself does not count in GDP.

*Topic: Expenditures not in GDP, used goods and financial assets*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 7) Explain why the purchase and sale of used goods and of financial assets are not included in the calculation of GDP even though transactions in these items amount to billions of dollars daily.

Answer: GDP measures the value of the goods and services produced in a given year. The key phrase in the definition is "produced in a given year." Used goods are counted in the GDP of the year in which they are produced and so they are not counted if they are bought and sold again. Financial assets, such as buying and selling stocks and bonds, are not production. These transactions are purely financial and are simply the changing of the ownership of assets. Hence neither the purchase nor the sale of used goods nor of financial assets are included in GDP.

*Topic: Expenditures not in GDP, used goods and financial assets*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 8) "When you purchase \$1,000 of stock in Microsoft, your purchase is an investment and hence is part of GDP." Is this assertion correct? Explain your answer.

Answer: The assertion is incorrect. Your purchase of \$1,000 of Microsoft stock does not increase GDP because it is the purchase of a financial asset. The investment component of GDP is the purchase of new capital goods. Your purchase of stock is not the purchase of a new capital good and hence, as a purely financial transaction, it is not included in GDP.

*Topic: Expenditures not in GDP, financial assets*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 9) What must be done to net domestic product at factor cost in order to transform it to gross domestic product? Explain why these adjustments are necessary.

Answer: Several adjustments must be made to net domestic product at factor cost in order to set it equal to GDP. First, indirect taxes must be added and subsidies must be subtracted. These changes are necessary because GDP is measured using market prices whereas net domestic product at factor cost measures what the goods and services cost to produce. The price can be different than the cost when there are taxes and subsidies present. Thus taxes must be added to the cost and subsidies subtracted in order to determine the price that was actually paid. (For instance, a DVD might cost \$20 but a \$1 sales tax makes the price \$21.) Then, the second adjustment is that depreciation also needs to be added. Depreciation is the wear and tear on capital when it is used and when it becomes obsolete. GDP includes expenditure on investment and some investment is used to replace the capital stock that has depreciated. So, when calculating GDP using the income approach, depreciation must be included. But depreciation is *not* included in net domestic product at factor cost because that amount includes only payments made (as income) to the inputs that helped produce the products and no payment is made for the depreciation of capital. So the addition of depreciation (as well as the adjustments for taxes and subsidies) is necessary in order to convert net domestic product at factor cost into GDP. Finally, because records cannot be 100 percent complete, any statistical discrepancy needs to be added (or subtracted).

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

- 11) Explain how GDP is measured according to the expenditure and income approaches.

Answer: GDP can be measured using the expenditure approach or the income approach. The expenditure approach uses the streams of spending and adds together the total expenditure, or spending, on final goods and services. Thus the expenditure approach calculates the sum of consumption expenditure, investment, government expenditure on goods and services, and net exports. The income approach uses another of the circular flows to calculate GDP. The income approach adds together all sources of income and then incorporates a few additional adjustments. Thus the income approach calculates the sum of wages (which is the compensation of employees) plus the net operating surplus (which is the sum of interest, rent, and profit). The sum is "net domestic product at factor cost." To change this sum to GDP, which is calculated at market prices rather than factor costs, and which is the gross product rather than net product, indirect taxes are added and subsidies subtracted, then depreciation is added, and finally any statistical discrepancy is added.

*AACSB: Written and oral communication*

- 12) Assume a small nation has the following statistics: its consumption expenditure is \$15 million, investment is \$2 million, government expenditure on goods and services is \$1 million, exports of goods and services to foreigners is \$1 million, and imports of goods and services from foreigners is \$1.5 million. Calculate this nation's GDP.

Answer: The nation's GDP equals the sum of consumption expenditure, investment, government expenditure on goods and services, and net exports of goods and services, where net exports of goods and services equals of goods and services exports minus imports of goods and services. So,  $GDP = \$15 \text{ million} + \$2 \text{ million} + \$1 \text{ million} + \$1 \text{ million} - \$1.5 \text{ million} = \$17.5 \text{ million}$ .

*Topic: Expenditure approach*

*Skill: Level 3: Using models*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Analytical thinking*

Item	Billions of dollars
Consumption expenditure	6,258
Investment	1,623
Government expenditure on goods and services	1,630
Exports of goods and services	998
Imports of goods and services	1,252

13) The table above gives the values of different expenditures in the United States during 1999.

Answer the following questions about the United States.

- What was the value of net exports of goods and services in 1999?
- What was (nominal) GDP equal to in 1999?
- What was the (nominal) value of total production equal to in 1999?

Answer: a. Net exports of goods and services equals the value of exports of goods and services, \$998 billion, minus the value of imports of goods and services, \$1,252 billion, or -\$254 billion.

b. GDP equals the sum of consumption expenditure, \$6,258, plus investment, \$1,623, plus government expenditure on goods and services, \$1,630, plus net exports, -\$254, or \$9,257 billion.

c. The value of total production equals the value of GDP, so total production was \$9,257 billion in 1999.

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Analytical thinking*

14) What is the difference between real and nominal GDP, and why do economists make this distinction?

Answer: Real GDP is a measure of the final goods and services produced in a year valued at constant prices. Nominal GDP is the final goods and services produced in a year valued at the prices that existed during the year. Economists make the distinction between real GDP and nominal GDP because nominal GDP changes for two reasons: When the production of goods and services changes and when the prices of the goods and services change. Economists want to be able to distinguish between changes brought about by production changes and changes brought about by price changes. Real GDP allows economists to make this distinction. In particular, by using prices that are constant, a change in real GDP represents a change in the production of goods and services and factors out the change in prices. Thus real GDP removes the effect from changes in prices and thereby reveals the change in the underlying production of goods and services.

*Topic: Real GDP versus nominal GDP*

*Skill: Level 4: Applying models*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

15) Is it possible for nominal GDP to increase while real GDP does not change?

Answer: Yes, it is possible for nominal GDP to increase while real GDP does not change.

Nominal GDP changes if either prices or production change, while real GDP changes only if production changes. If production does not change while the prices of the goods and services increase, real GDP does not change while nominal GDP increases.

*Topic: Real GDP versus nominal GDP*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 5.2*

*Status: Old*

*AACSB: Written and oral communication*

16) Can nominal GDP ever be less than real GDP?

Answer: Yes, nominal GDP can be less than real GDP. If prices generally fall from one period to the next, then nominal GDP is less than real GDP. However, in the U.S. economy, because prices generally rise, nominal GDP typically is greater than real GDP (except in the base period.) But, there is no economic law that states that prices must generally rise and so there is no necessity for nominal GDP to be larger than real GDP.

## 5.8 Essay: The Use and Limitations of Real GDP

1) Explain how our standard of living depends upon our level of real GDP per person, but there might not be a one-to-one relationship between the standard of living and real GDP per person. Give examples of things that can affect one, but not the other.

Answer: Although GDP has a significant impact on our standard of living, it is not a perfect measure of the standard of living. GDP omits some factors that affect our standard of living. GDP does not include household production, all the tasks performed around the house. It omits underground production, the part of the economy hidden from the government. Real GDP does not include the value of people's leisure time. And, GDP does not make allowances for environmental quality, health and life expectancy, or political freedom and social justice. All of these factors influence the quality of our life and hence our standard of living. Indeed, occasionally a change will affect GDP and the standard of living in different directions. For instance, if people decide they want more leisure and hence retire early, GDP will decrease because fewer people are working, but the standard of living will increase. Or, if there is an increase in production that creates massive amounts of pollution, GDP increases even though the standard of living likely decreases.

*AACSB: Written and oral communication*

- 2) "If country A has a higher level of real GDP per person than country B, then people in Country A must enjoy a higher standard of living than people in Country B." Is this statement true or false and explain your answer.

Answer: The statement is false. Factors other than real GDP per person affect the standard of living. For instance, factors such as household production, underground production, leisure time, and environmental quality all affect the standard of living and all are omitted from real GDP per person. In addition, the standard of living is influenced by health and life expectancy as well as by the nation's political freedom and social justice, none of which is measured by real GDP per person. Although real GDP per person is an important factor in determining a country's standard of living, it is not the only factor.

- 3) What is a business cycle? What are its phases and turning points?

Answer: A business cycle is the periodic but irregular up-and-down movement in production and jobs. It has two phases and two turning points. As the economy slows and the growth in real GDP turns negative, the economy enters the recession phase of the business cycle. At the bottom of the recession phase is one turning point, the trough. As the economy moves through the trough, it enters the expansion part of the business cycle during which real GDP grows. Finally, as the economy reaches its high point and swings from an expansion to a recession, the economy passes through the other turning point, the peak.

- 5) List and discuss various types of goods and services omitted from measured GDP.

Answer: Household production, such as preparing meals and taking care of children, includes productive activities but does not involve market transactions. Therefore, household production is omitted as part of GDP. Underground production, such as working for cash to avoid taxes or engaging in illegal activities, is not reported to the government and hence is not counted as part of GDP. Leisure time and preserving and improving the natural environment are not production *per se* but are clearly economic goods. They are not counted as part of GDP because it is hard to quantify and put a monetary value on them.

*Section: Checkpoint 5.3*

*Status: Old*

*AACSB: Written and oral communication*

- 6) What would happen to measured GDP if more people started hiring workers to do household chores such as cooking and cleaning?

Answer: GDP is the value of the final goods and services that are produced in an economy over a specified time period. However, GDP, as measured, does not include the value of household production people do for themselves around their homes. Therefore if you wash your car at your home or apartment, the value of the car washing is not included in GDP. However if you hired someone to wash your car at your home or apartment, the value of the car washing would be included in GDP. Thus if more people started hiring workers to do household chores, measured GDP would increase.

## 5.9 Essay: Appendix: Measuring Real GDP

Data for 2012			Data for 2013	
Item	Quantity	Price	Quantity	Price
Hot dogs	4	\$1.50	6	\$1.75
Pepsi	2	\$1.00	3	\$1.25

- 1) The table gives data on the production and prices in a small economy. Use 2012 as the base period.
- What does nominal GDP equal in 2012?
  - What does real GDP equal in 2012?
  - What does nominal GDP equal in 2013?
  - Using the chained-price method, what does real GDP equal in 2013?

Answer: a. Nominal GDP in 2012 equals \$8.00. Nominal GDP equals the sum of the market value of hot dogs (\$6.00) plus the market value of Pepsi (\$2.00).  
b. Real GDP in 2012 equals \$8.00. Real GDP equals nominal GDP in the base period.  
c. Nominal GDP in 2013 equals \$14.25. Nominal GDP equals the sum of the market value of hot dogs (\$10.50) plus the market value of Pepsi (\$3.75).  
d. Real GDP in 2013 equals \$12.00. To calculate real GDP in 2013, we need the percentage change in production between 2012 and 2013 valuing the production at 2012 prices and at 2013 prices. Both percentage changes are 50 percent. (For example, using 2012 prices, production in 2012 is \$8.00 and in 2013 is \$12.00, a 50 percent increase.) Because both percentage changes are 50 percent, the average production change is 50 percent. Therefore real GDP in 2013 equals real GDP in 2012 multiplied by 150 percent, or  $(\$8.00 \times 1.50) = \$12.00$ .

Item	Data for 2012		Data for 2013	
	Quantity	Price	Quantity	Price
Magazines	10	\$5	30	\$10
Paperback books	10	\$10	20	\$15

- 2) The table gives data on the production and prices in a small economy. Use 2012 as the base period. Using the chained-price method, what is the growth rate of real GDP from 2012 to 2013?

Answer: To calculate the growth rate, it is necessary to calculate the growth rates using first 2012 and then 2013 prices and then take the average of the two rates. This procedure gives:

Real GDP in 2012 using 2012 prices = 150

Real GDP 2013 using 2012 prices = 350

Real GDP 2012 using 2013 prices = 250

Real GDP 2013 using 2013 prices = 600

Growth rate using 2012 prices = 133.3 percent

Growth rate using 2013 prices = 140.0 percent

Hence the growth rate equals 136.7 percent, the average of 133.3 percent and 140.0 percent.

## 6.4 Integrative Questions

Consider the following people:

- Chris quits his job as an automobile mechanic to pursue his college education full-time.
- Arrelo is temporarily laid off from her technical support job because of a strike by production workers.
- Schurita graduated from college in May and is currently looking for a job.
- Bo quit his job on September 1 and then, after looking for a new job, will begin his new job on October 1.
- Terri retired from his job on May 1.
- Vicki works part-time at Bainen Press to help pay her college tuition.

1) Bo's actions would

- A) have no impact on the September unemployment rate or the October unemployment rate.
- B) raise the September unemployment rate and lower the October unemployment rate.
- C) raise the September unemployment rate and not change the October unemployment rate.
- D) classify him as out of the labor force in September.
- E) raise the September unemployment rate and the October unemployment rate.

Answer: B

## 6.5 Essay: Labor Market Indicators

1) How does the Current Population Survey determine if a person should be counted in the labor force?

Answer: To be in the labor force, a person must either be employed or unemployed. To be counted as "employed," in the week prior to the survey the person must either have worked for pay for one hour or more or else worked without pay for fifteen hours or more in a family-owned business or else been temporarily absent from his or her job. To be counted as unemployed in the survey, the person must have had no job, been available for work, and either made specific efforts to find work within the previous four weeks or else be waiting to be recalled to a job from which they were laid off.

Topic: Unemployment rate

Skill: Level 1: Definition

Section: Checkpoint 6.1

Status: Old

AACSB: Written and oral communication

- 2) What is the definition of the unemployment rate? How are part-time workers and discouraged workers treated when calculating the unemployment rate?

Answer: The definition of the unemployment rate is  $(\text{number of unemployed})/(\text{labor force}) \times 100$ . In this calculation, the labor force equals the sum of employed plus unemployed people. Part-time workers are counted as employed. Thus part-time workers are counted in the labor force but are NOT counted as unemployed. Discouraged workers are people who have stopped looking for work and so are not in the labor force. Hence, when calculating the unemployment rate, discouraged workers are counted in neither the number of unemployed nor in the labor force.

*Topic: Unemployment rate*

*Skill: Level 1: Definition*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Written and oral communication*

- 3) Define the unemployment rate and labor-force participation rate. Discuss the differences between these two rates.

Answer: The unemployment rate is defined as  $\frac{(\text{Number of people unemployed})}{(\text{Labor force})} \times 100$  and the labor force participation rate is defined as  $\frac{(\text{Labor force})}{(\text{Working-age population})} \times 100$ . The two measures give different perspectives on the labor market. The labor force participation rate tells the percentage of the working-age population that is either working or is available for work. The unemployment rate tells the percentage of the people working or available for work (the labor force) who do not have jobs.

*Topic: Unemployment rate and labor force participation rate*

*Skill: Level 3: Using models*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Written and oral communication*

- 4) What is a "marginally attached worker"?

Answer: A marginally attached worker is a person without a job, who is available and willing to work, but who has not made specific efforts to find a job within the past four weeks. Essentially, a marginally attached worker is someone who wants a job but has a weak "attachment" to the job market and so he or she stops looking.

*Topic: Marginally attached worker*

*Skill: Level 1: Definition*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Written and oral communication*

- 5) What are the reasons some people choose to be part-time workers?

Answer: Some people are part-time workers for economic reasons: They want full-time work but cannot find it. These people are called "involuntary part-time workers." Other people choose to be part time for non-economic reasons. These reasons include health problems, family or personal responsibilities, and/or educational commitments that limit availability for work.

*Topic: Part-time workers*

*Skill: Level 1: Definition*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Written and oral communication*

- 6) The unemployment rate is 6 percent. If the population is 300 million, and the number unemployed is 6 million and the number employed is 94 million, what is the size of the labor force?

Answer: The labor force is the sum of the number of employed people plus the number of unemployed people. Hence the labor force equals 94 million + 6 million = 100 million.

*Topic: Labor force*

*Skill: Level 3: Using models*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Analytical thinking*

- 7) Suppose the current unemployment rate is 5 percent, the labor force is 400 million people, the labor force participation rate is 80 percent and the working-age population is 500 million people. What number of people are unemployed?

Answer: The number of unemployed people equals the labor force multiplied by the unemployment rate. Hence the number of unemployed people is (400 million)  $\times$  (5 percent) = 20 million people.

*Topic: Unemployment*

*Skill: Level 3: Using models*

*Section: Checkpoint 6.1*

*Status: Old*

*AACSB: Analytical thinking*

- 8) Suppose that the population is 275 million. Also assume that the labor force is 135 million and that 130 million people are employed. Calculate the unemployment rate.

Answer: The unemployment rate is (5 million unemployed  $\div$  135 million labor force)  $\times$  100 = 3.7 percent.

*Topic: Unemployment rate*

*Skill: Level 3: Using models*

*Section: Checkpoint 6.1*

## 6.6 Essay: Labor Market Trends and Fluctuations

- 1) How does the unemployment rate change in a recession and in an expansion?

Answer: During a recession, the unemployment increases. During an expansion, the unemployment rate decreases.

Topic: Unemployment rate

Skill: Level 1: Definition

Section: Checkpoint 6.2

Status: Old

AACSB: Reflective thinking

- 2) Over the last 50 years, how has
- the labor force participation rate changed?
  - the men's and women's labor force participation rates changed?

Answer: a. Over the past 50 years, the overall labor force participation rate increased.  
b. Over the past 50 years, the men's labor force participation rate decreased and the women's labor force participation rate increased.

*Topic: Labor force participation rate*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.2*

*Status: Old*

*AACSB: Written and oral communication*

- 3) Over the last 50 years, how has the women's labor force participation rate changed? What are reasons for this change?

Answer: Over the past 50 years, the women's labor force participation rate has increased. Four reasons can be advanced for the increase. First, more women are graduating from college. As college graduates, their salaries are higher and these higher salaries have attracted women to the labor force. Second, technological change has created a large number of white collar jobs with flexible hours, jobs women find attractive. Third, technological change in the home has decreased the amount of time necessary to do some tasks around the house and hence increased the amount of time some women can offer to the paid workplace. Finally, more families have felt the need to have two incomes in order to bolster tight budgets.

*Topic: Labor force participation rate*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.2*

*Status: Old*

*AACSB: Written and oral communication*

- 4) Explain how the labor force participation rate, the unemployment rate, and the percentage of the labor force employed part time change in a recession.

Answer: The labor force participation rate tends to decrease during a recession as more workers become discouraged. The unemployment rate increases during a recession because there are fewer jobs. The percentage of the labor force employed part time tends to increase during a recession as part-time workers for economic reasons increase.

*Topic: Labor market in a recession*

*Skill: Level 2: Using definitions*

*AACSB: Written and oral communication*

## 6.7 Essay: Unemployment and Full Employment

- 1) What are the three types of unemployment and how do they change over the business cycle?

Answer: The three types of unemployment are frictional, structural, and cyclical. Of these three types, the first two—frictional and structural—have no strong relationship to the business cycle. The third type, cyclical unemployment, however is the result of the business cycle. When the economy is in a recession and people lose their jobs as a result of the recession, the unemployed workers are cyclically unemployed. Conversely, when the economy is in an expansion, cyclical unemployment decreases. Hence, cyclical unemployment increases during a recession and decreases during an expansion.

*Topic: Types of unemployment*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 2) Define and give an example of how a spell of frictional unemployment can begin.

Answer: Frictional unemployment is the unemployment resulting from normal turnover in the labor market. For instance, there are always people entering or reentering the labor force (entrants and reentrants) and while these people look for work, they are frictionally unemployed. Similarly, there are always some people who quit their jobs to look for something better, and these people are frictionally unemployed. And, there is always a normal ebb and flow among firms as some gain sales while others lose them. The firms that lose business might release workers and these people also are frictionally unemployed.

*Topic: Types of unemployment, frictional*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 3) Can frictional unemployment ever be totally eliminated? Explain your answer.

Answer: Frictional unemployment arises from normal labor market turnover. Because this type of unemployment is associated with normal changes, it is impossible to be eliminated. Indeed, some frictional unemployment is purely voluntary, with these unemployed workers choosing to become unemployed because they expect to find a job that is more satisfying.

*Topic: Types of unemployment, frictional*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 4) Explain the difference between frictional and structural unemployment.

Answer: Frictional unemployment is more short term and is associated with people changing jobs and entering the labor force. Structural unemployment is more long term and is associated with changes in the structure of the economy that require people to learn new skills.

*Topic: Types of unemployment, frictional and structural unemployment*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 5) Define and give an example of how a spell of structural unemployment can begin.

Answer: Structural unemployment arises when changes in technology or international competition changes the skills necessary for jobs or change the location of jobs. For instance, technological change, such as the invention of the personal computer, can switch the skills needed for jobs, say from the ability to repair typewriters to the ability to repair computers. In this case, the people who lose their jobs and do not have the necessary skills to perform the new jobs are structurally unemployed. In addition, there are times when foreign competition causes large downscaling in sectors of the U.S. economy as U.S. firms find that they cannot compete with foreign firms. In this case, the U.S. workers who lose their jobs do not go overseas to take jobs in the expanding foreign companies, so the workers are structurally unemployed.

*Topic: Types of unemployment, structural*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 6) Explain what type of unemployment changes with the business cycle and how it changes.

Answer: Cyclical unemployment is the unemployment that changes with the business cycle. Cyclical unemployment rises when the economy is in the recession part of a business cycle and decreases when the economy is in the expansion part of the business cycle.

*Topic: Types of unemployment, structural*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

7) Why is there unemployment even when the economy is at "full employment"?

Answer: There is unemployment even at "full employment" because there always will be unemployment. Unemployment is a natural occurrence in any economy with changes, such as high school or college graduates entering the labor force, or technological advances in one sector, or consumer preferences changing to favor one product over another. Frictional and structural unemployment will always exist. Cyclical unemployment, however, is a different matter. Cyclical unemployment does not seem to have the same degree of inevitability and hence full employment is defined as occurring when cyclical unemployment equals zero.

*Topic: Full employment*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

8) Explain the relationship(s) between full employment, cyclical unemployment, the natural unemployment rate, and potential GDP.

Answer: The economy is at full employment when there is no cyclical unemployment. The unemployment rate at full employment is called the natural unemployment rate. Because there is no cyclical unemployment, the natural unemployment rate is comprised of only frictional and structural unemployment. The level of output that the economy would produce if it was at full employment is called potential GDP.

*Topic: Full employment, natural unemployment rate, potential GDP*

*Skill: Level 1: Definition*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

9) For the past decade, the unemployment rate in Western Europe has been higher than the unemployment rate in the United States. Based on this fact, is the natural unemployment rate larger in Western Europe or in the United States? Why might the natural rates differ between the two areas?

Answer: The natural unemployment rate is probably higher in Western Europe than in the United States. A major reason why this difference exists is that unemployment benefit payments in Western Europe are higher than in the United States, so people stay frictionally unemployed longer in Western Europe.

*Topic: Natural unemployment rate*

*Skill: Level 3: Using models*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 10) Consider the following statement: "Real GDP and potential GDP are always equal." Is this statement true or false? Explain your answer.

Answer: Real GDP often differs from potential GDP. Real GDP equals potential GDP only when the economy is at full employment. However, the economy is not always at full employment. When employment is less than full employment, real GDP is less than potential GDP and the economy is in a recession. When employment exceeds full employment, real GDP exceeds potential GDP and the economy is in an expansion.

*Topic: Potential GDP and real GDP*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 11) What is the relationship over the business cycle of potential GDP and real GDP?

Answer: The level of output that the economy would produce if it was at full employment is called potential GDP. However, the economy is not always at full employment. In a recession, employment is less than full employment and so real GDP is less than potential GDP. And, in an expansion, employment can exceed full employment so that real GDP exceeds potential GDP.

*Topic: Potential GDP and real GDP*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 6.3*

*Status: Old*

*AACSB: Written and oral communication*

- 12) Explain the relationship between real GDP and potential GDP and between the unemployment rate and the natural unemployment rate as the economy moves through a business cycle.

Answer: Potential GDP is the level of GDP when the economy is at full employment. Real GDP is the level of GDP and can be above or below potential GDP depending on whether employment is above or below full employment. The natural unemployment rate is the unemployment rate when the economy is at full employment. The unemployment rate can be above or below the natural unemployment rate. In a recession, real GDP is less than potential GDP and unemployment exceeds the natural rate. In an expansion, real GDP is greater than potential GDP and unemployment is less than the natural rate.

*Topic: Potential GDP and real GDP*

# Chapter 7 The CPI and the Cost of Living

---

## 7.1 The Consumer Price Index

- 1) The CPI stands for
- A) Citizens Paying Index.
  - B) Corporate Pricing Index.
  - C) Consumer Paying Index.
  - D) Consumer Price Index.
  - E) Corporate/Consumer Payment Index.

Answer: D

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 2) The Consumer Price Index is calculated by the
- A) Bureau of Labor Statistics.
  - B) Department of Labor.
  - C) Department of Commerce.
  - D) Federal Reserve Bank of New York.
  - E) Society for Consumer Protection.

Answer: A

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 3) The CPI is a measure of the
- A) percentage change in the price level.
  - B) average prices of all goods.
  - C) average prices paid by consumers for a fixed basket of goods and services.
  - D) average prices of all goods and services produced.
  - E) average change in the output of the goods and services purchased by a typical urban consumer.

Answer: C

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 4) The Consumer Price Index (CPI) measures the changes of the
- A) prices paid by consumers for a fixed market basket of consumer goods and services.
  - B) quantities of a fixed market basket of goods produced by businesses.
  - C) lowest prices paid by consumers for a fixed market basket of consumer goods and services.
  - D) prices paid by all businesses for a fixed market basket of production resources.
  - E) prices paid by consumers and businesses for a fixed market basket of goods and services.

Answer: A

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 5) The Consumer Price Index measures the average prices paid by
- A) businesses for a fixed market basket of resources.
  - B) businesses for the most frequently used basket of resources.
  - C) urban consumers for a fixed market basket of goods and services.
  - D) urban consumers for the goods and services that most frequently change in price.
  - E) businesses and consumers for a market basket of goods and services.

Answer: C

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 6) For the CPI to provide an accurate measure of the prices paid by urban consumers, it is necessary to
- A) assign equal weights to all the goods and services included in the market basket surveyed so that nothing is over-weighted.
  - B) have a market basket that is consistent and corresponds to what households actually purchase.
  - C) have prices stated in dollars so consumers can compare what they spend.
  - D) change the market basket each month to reflect the changes that consumers make.
  - E) make certain that the incomes of the consumers surveyed do not change because such a change would affect the market basket of the goods and services they buy.

Answer: B

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Section: Checkpoint 7.1

Status: New

AACSB: Analytical thinking

- 46) Suppose that last year, the price of strawberries was \$2 and the price of milk was \$1. This year, the price of milk is \$2 and the price of strawberries is \$1. Which of the following statements is true?
- A) The CPI does not change because the change in the two prices is the same.
  - B) The CPI increases because milk is more expensive.
  - C) The CPI decreases because strawberries are cheaper.
  - D) The CPI might increase or decrease depending on the quantities in the CPI market basket.
  - E) The change in the CPI depends how the market basket changed between the two years.

Answer: D

- 92) Since 1300, the inflation rate has been greater than 2 percent per year and reaching its highest peaks
- A) primarily before 1400.
  - B) primarily between 1400 and 1500.
  - C) primarily between 1500 and 1700.
  - D) primarily between 1700 and 1900.
  - E) primarily after 1900.

Answer: E

Topic: *Eye on the past, 700 years of inflation and deflation*

Skill: *Level 1: Definition*

Section: *Checkpoint 7.1*

Status: *Old*

AACSB: *Reflective thinking*

- 93) The Consumer Price Index (CPI) measures
- A) the prices of a few consumer goods and services.
  - B) the prices of those consumer goods and services that increased in price.
  - C) the average of the prices paid by urban consumers for a fixed market basket of goods and services.
  - D) consumer confidence in the economy.
  - E) the average of the costs paid by businesses to produce a fixed market basket of consumer goods and services.

Answer: C

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 94) The CPI is reported once every
- A) year.
  - B) quarter.
  - C) month.
  - D) week.
  - E) other year.

Answer: C

Topic: CPI

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 95) If a country had a CPI of 105.0 last year and a CPI of 102.0 this year, then
- A) the average prices of goods and services increased between last year and this year.
  - B) the average prices of goods and services decreased between last year and this year.
  - C) the average quality of goods and services decreased between last year and this year.
  - D) there was an error when calculating the CPI this year.
  - E) the quantity of consumer goods and services produced decreased between last year and this year.

Answer: B

Topic: CPI

Skill: Level 2: Using definitions

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 96) The period for which the Consumer Price Index is defined to equal 100 is called the
- A) reference base period.
  - B) base period.
  - C) starting point.
  - D) zero period.
  - E) beginning period.

Answer: A

Topic: CPI, base period

Skill: Level 1: Definition

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 97) In the United States, the good or service given the most weight in the CPI basket when calculating the CPI is
- A) food and beverages.
  - B) taxes.
  - C) housing.
  - D) medical care.
  - E) recreation.

Answer: C

Topic: CPI, basket

Skill: Level 2: Using definitions

Section: Checkpoint 7.1

Status: Old

AACSB: Reflective thinking

- 98) Suppose the market basket of consumer goods and services costs \$180 using the base period prices, and the same basket of goods and services costs \$300 using the current period prices. The CPI for the current year period equals
- A) 166.7.                      B) 66.7.                      C) 160.0.                      D) 60.0.                      E) 300.0.

Answer: A

Topic: CPI formula

Skill: Level 2: Using definitions

Section: Checkpoint 7.1

Status: Old

AACSB: Analytical thinking

- 99) Suppose the CPI last year was 82.3 and this year is 90.9. Based on this information, we can calculate that the inflation rate in 1981 was
- A) 10.4 percent.
  - B) 8.6 percent.
  - C) 90.9 percent.
  - D) 82.3 percent.
  - E) 9.09 percent.

Answer: A

Topic: Inflation

Skill: Level 2: Using definitions

Section: Checkpoint 7.1

Status: Old

AACSB: Analytical thinking

- 100) In the United States, the inflation rate since 1999 generally was
- A) higher than between 1979 to 1981.
  - B) higher than in the 1980s.
  - C) lower than between 1979 to 1981.
  - D) much higher than between 1985 to 1995.
  - E) negative.

Answer: C

Topic: Recent inflation

Skill: Level 2: Using definitions

Section: Checkpoint 7.1

AACSB: Reflective thinking

## 7.2 The CPI and Other Price Level Measures

- 1) If we compare the CPI to a perfect cost of living index, we find that they are
- A) the same thing.
  - B) different because the cost of living has nothing to do with prices.
  - C) different because the CPI does not measure prices.
  - D) different because the CPI uses a fixed basket and has some measurement difficulties.
  - E) not the same because the CPI has a fixed reference base period.

Answer: D

Topic: CPI versus cost of living index

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 2) Economists agree that the CPI
- A) is a near perfect measure of the cost of living.
  - B) has no relation to the cost of living.
  - C) is a possibly biased measure of the cost of living.
  - D) almost always shows the cost of living rising less rapidly than is the case in reality.
  - E) overstates inflation by about 4.1 percentage points a year.

Answer: C

Topic: CPI versus cost of living index

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 3) When economists speak of the CPI bias, they are referring to
- A) the tendency for the CPI to overstate price changes.
  - B) the tendency for the CPI to understate price changes.
  - C) the tendency for the CPI to understate inflation.
  - D) errors in measuring the prices used in the CPI.
  - E) the tendency for government officials to impose their values on the data.

Answer: A

Topic: CPI bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 4) Which of the following is NOT a source of bias in the CPI?
- i. quality change bias
  - ii. new goods bias
  - iii. quantity change bias
- A) i only                      B) ii only                      C) iii only                      D) i and ii                      E) ii and iii

Answer: C

Topic: CPI bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 5) Which of the following makes the Consumer Price Index a less accurate measure of the cost of living?
- i. The monthly price survey conducted to collect information about prices is very unreliable.
  - ii. The existence of a new goods bias in the calculation of the CPI
  - iii. The existence of a quality change bias in the calculation of the CPI
- A) i only  
B) ii only  
C) ii and iii  
D) i and ii  
E) i, ii, and iii

Answer: C

Topic: CPI bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

6) Which of the following is a bias in the CPI?

- i. new goods bias
  - ii. index change bias
  - iii. commodity substitution bias
- A) i only
  - B) ii only
  - C) iii only
  - D) i and iii
  - E) i, ii, and iii

Answer: D

Topic: CPI bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

7) The CPI is biased because it

- A) takes into account the changes in product quality.
- B) takes into account the changes in technology.
- C) does not always take into account the changes in product quality.
- D) accurately measures the cost of living but not the cost of producing.
- E) does not include services.

Answer: C

Topic: CPI bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

8) If the CPI is used as a cost of living index, incomes that are adjusted to reflect the changes in the CPI will

- A) increase by more than the actual change in the cost of living.
- B) decrease by more than the actual change in the cost of living.
- C) increase by more than the actual change in quantities.
- D) decrease by more than the actual change in quantities.
- E) generally rise by about 2 percent a year because the standard of living generally rises by about 2 percent a year.

Answer: A

Topic: CPI bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 9) The presence of new goods that are of higher quality than the old goods leads the BLS to
- A) update the market basket every time a new good is available.
  - B) do nothing because at least some people still buy the old goods.
  - C) try to separate price differences from improvements in quality.
  - D) actually understate the cost of living when calculating the CPI.
  - E) immediately update the reference base period used in calculating the CPI.

Answer: C

Topic: CPI bias, new goods

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 10) When a good gets better from one year to the next, the CPI has a what is called
- A) new goods bias.
  - B) quality change bias.
  - C) commodity substitution bias.
  - D) outlet substitution bias.
  - E) magnitude of change bias.

Answer: B

Topic: CPI bias, quality change

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 11) An example of the quality change bias, and not a new goods bias, in the calculation of the CPI is a price increase in
- A) Coke versus Pepsi.
  - B) DVDs purchased on Craigslist, an online classified website.
  - C) a 2013 GPS unit versus a 2008 GPS unit.
  - D) etexts versus used books .
  - E) pants purchased by a first-time shopper at Aeropostale.

Answer: C

Topic: CPI bias, quality change

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

12) The quality change bias is most likely to put \_\_\_\_\_ into the CPI and so \_\_\_\_\_ the inflation rate.

- A) a downward bias; understate
- B) an upward bias; understate
- C) an upward bias; overstate
- D) a downward bias; overstate
- E) a random bias; randomly overstate or understate

Answer: C

Topic: CPI bias, quality change

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

13) When discussing the CPI, the term "commodity substitution bias" refers to changes in

- A) prices that lead business to change the items they buy.
- B) quantities that lead households to change the items they buy.
- C) prices that lead households to change the items they buy.
- D) income that lead households to change the items they buy.
- E) stores so that consumers switch from one store to another.

Answer: C

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

14) The commodity substitution bias is most likely to put \_\_\_\_\_ into the CPI and so \_\_\_\_\_ the inflation rate.

- A) a downward bias; understate
- B) an upward bias; understate
- C) an upward bias; overstate
- D) a downward bias; overstate
- E) a random bias; randomly overstate or understate

Answer: C

Topic: CPI bias, commodity substitution bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 15) The CPI overstates inflation because the average consumer buys
- A) the same basket of goods every week.
  - B) more of those goods whose relative price has risen.
  - C) less of those goods whose relative price has risen.
  - D) lower quality goods if they have a choice.
  - E) a generally random assortment of goods and services each week because what is purchased depends on what the consumer needs.

Answer: C

Topic: CPI bias, commodity substitution bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 16) In constructing the CPI, the BLS has to deal with commodity substitution bias, which is defined as
- A) consumers' substitution of discount stores for full service stores to avoid the higher prices in the full service stores.
  - B) consumers' substitution of cheaper goods for goods whose prices increase.
  - C) the bias from quality changes in existing products that cause prices to increase.
  - D) the bias from new goods being introduced that are more expensive than older goods.
  - E) the bias that arises because the BLS changes the CPI market basket each month.

Answer: B

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 17) The fact the consumers substitute one good for another when prices change is
- A) taken into account by the fixed market basket used in calculating the CPI.
  - B) not taken into account by the fixed market basket used in calculating the CPI.
  - C) not important to economists.
  - D) a reason why the CPI is used to calculate inflation rates.
  - E) a reason why the CPI understates the actual change in the cost of living.

Answer: B

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

18) When the price of broccoli increase relative to cauliflower, people who buy fresh vegetables respond by buying more cauliflower and fewer broccoli. As a result, the CPI has

- A) a new goods bias.
- B) a quality change bias.
- C) a commodity substitution bias.
- D) an outlet substitution bias.
- E) a new price bias.

Answer: C

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

19) Suppose the Bureau of Labor Statistics uses Ballpark Franks as the hot dogs used when calculating the consumer price index. During 2012, Oscar Mayer aggressively reduces prices. Consumers respond by purchasing more Oscar Mayer and less Ballpark Franks. The 2012 CPI is likely to

- A) overstate the average prices paid by consumers.
- B) overstate the average prices paid by businesses.
- C) understate the average prices paid by consumers.
- D) understate the average prices paid by businesses.
- E) neither understate nor overstate the average prices because some consumers will still buy Ballpark Franks.

Answer: A

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

20) An example of the commodity substitution bias in the calculation of the CPI is a price increase in

- A) turkey when the price of chicken doesn't rise.
- B) a GPS unit versus a AAA map book.
- C) a 2014 Toyota Camry versus a 2005 Honda Civic.
- D) etexts versus used books bought through Craigslist.
- E) new homes because people's incomes have increased.

Answer: A

Topic: CPI bias, commodity substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 21) Suppose higher prices lead consumers to switch from shopping at Abercrombie & Fitch to shopping at Wal-Mart. If the CPI does not reflect this change, it is referred to as
- A) a new goods bias.
  - B) a quality change bias.
  - C) an outlet substitution bias.
  - D) a new price bias.
  - E) store bias.

Answer: C

Topic: CPI bias, outlet substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 22) If higher prices cause buyers to shop at discount stores, the CPI has
- A) a new goods bias.
  - B) a quality change bias.
  - C) a commodity substitution bias.
  - D) an outlet substitution bias.
  - E) a discounted bias.

Answer: D

Topic: CPI bias, outlet substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 23) The outlet substitution bias is most likely to put \_\_\_\_\_ and so \_\_\_\_\_ the inflation rate.
- A) a downward bias into the CPI; understate
  - B) an upward bias into the CPI; understate
  - C) an upward bias into the CPI; overstate
  - D) a downward bias into the CPI; overstate
  - E) no bias into the CPI because it is such a small effect; have no effect on

Answer: C

Topic: CPI bias, outlet substitution bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 24) An example of the outlet substitution bias in the calculation of the CPI is a price increase in
- A) GPS units versus AAA map books.
  - B) olive oil versus vegetable oil.
  - C) a 2014 Honda Civic relative to a 2004 Honda Civic.
  - D) textbooks bought through the campus bookstore relative to textbooks via Craigslist.
  - E) a trip to Mexico for a couple that had previously taken vacations in Europe.

Answer: D

Topic: CPI bias, outlet substitution bias

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 25) Which of the following statements about the CPI is (are) correct?
- i. The only significant bias in the CPI is the commodity substitution bias.
  - ii. The CPI probably overstates inflation by 1.1 percentage points a year.
  - iii. As far as the bias in the CPI is concerned, the new goods bias and the outlet substitution biases are irrelevant.
- A) i only                      B) ii only                      C) iii only                      D) i and iii                      E) i and ii

Answer: B

Topic: CPI bias, magnitude

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 26) The bias in the CPI distorts private contracts because
- A) a future payment that is linked to the CPI is likely to be raised above the true increase in the price level.
  - B) a worker that links her salary to the CPI is likely to be worse off than a worker that doesn't link her salary to the CPI.
  - C) a lender that links the interest payments on the loan to the CPI is likely to be worse off than a lender that does not link the interest payments on the loan to the CPI.
  - D) a future increase in a payment that is linked to the CPI is likely to be less than the true increase in the price level.
  - E) the CPI cannot properly account for what goods and services a typical urban consumer buys.

Answer: A

Topic: CPI bias, private contracts

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 27) If a private wage contract is agreed upon with a cost of living adjustment such that wage hikes are equal to increases in the CPI,
- A) the employer benefits because wages will rise less than the change in actual prices.
  - B) workers exactly keep pace with changes in the cost of living.
  - C) workers benefit because the CPI increases more rapidly than does the cost of living.
  - D) the CPI bias means that workers benefit if the price level rises and the employer benefits if the price level falls.
  - E) the CPI bias means that workers benefit if the price level falls and the employer benefits if the price level rises.

Answer: C

Topic: CPI bias, private contracts

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 28) Mark has a two-year wage contract with his employer. Mark's wage contract specifies a \$50,000 salary for the first year, and specifies a salary increase equal to the percentage increase in the CPI during the second year. The percentage increase in the CPI during the year was 4.0 percentage points. If the CPI overstates inflation by 1.0 percentage point, at the end of the first year Mark's salary increased by \_\_\_\_\_ more than it would have without the upward bias.
- A) \$50                      B) \$3000                      C) \$500                      D) \$1500                      E) \$2000

Answer: C

Topic: CPI bias, private contracts

Skill: Level 3: Using models

Section: Checkpoint 7.2

Status: Old

AACSB: Analytical thinking

- 29) Because a third of government outlays are linked directly to the CPI, as time passes, the CPI bias means that the government's outlays are
- A) larger than needed to keep pace with the cost of living.
  - B) smaller than needed to keep pace with the cost of living.
  - C) exactly equal to the changes in the cost of living.
  - D) larger than needed to keep pace with the cost of living if the CPI is falling from one year to the next, otherwise the outlays are smaller than needed to keep pace with the cost of living.
  - E) smaller than needed to keep pace with the cost of living if the CPI is falling from one year to the next, otherwise the outlays are larger than needed to keep pace with the cost of living.

Answer: A

Topic: CPI bias, government outlays

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 30) The bias in the CPI affects government outlays because the overstatement of inflation
- A) increases fiscal pressure.
  - B) increases government outlays by more than what is justified.
  - C) decreases social welfare benefits.
  - D) decreases government outlays by more than what is justified.
  - E) means that tax receipts are less than what is needed to cover government outlays.

Answer: B

Topic: CPI bias, government outlays

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 31) Because the CPI overstates inflation,
- A) when wages are linked to the CPI, workers' wages become too low as time passes.
  - B) as time passes, government payments are increasingly lower than intended.
  - C) as time passes, government outlays are increased by more than necessary to compensate for inflation.
  - D) workers do not receive adequate compensation for price changes.
  - E) most contracts use the GDP deflator to measure inflation.

Answer: C

Topic: CPI bias, government outlays

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 32) Between the base period and the next period, prices stay constant. The GDP price index in the next period
- A) cannot be calculated without knowing how much the quantity changed.
  - B) will equal 0 because there is no change.
  - C) is equal to 100 because there is no change.
  - D) is equal to 1 because there is no change.
  - E) is equal to 50 because there is no change.

Answer: C

Topic: Real GDP and nominal GDP

Skill: Level 3: Using models

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 33) The GDP deflator is
- A) a measure of the level of production.
  - B) always greater than 100.
  - C) the price level during the base year.
  - D) a measure of the price level.
  - E) equal to nominal GDP during the base year.

Answer: D

Topic: GDP price index

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 34) The GDP deflator measures
- A) the price level.
  - B) the quantity level.
  - C) real GDP.
  - D) nominal GDP.
  - E) the quality of the goods and services in GDP.

Answer: A

Topic: GDP price index

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 35) If the GDP price index is 137, this value means that prices have increased
- A) 137 percent in the last year.
  - B) 37 percent in the last year.
  - C) 37 percent since the base year.
  - D) 137 percent since the base year.
  - E) 63 percent since the base year.

Answer: C

Topic: GDP price index

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Analytical thinking

- 36) For the purpose of measuring the cost of living for consumers, one reason the GDP price index is NOT a good substitute for the CPI is because the GDP price index
- A) compares a current year basket of goods with a base year basket of goods.
  - B) compares current year's prices with base year's prices.
  - C) includes the prices of exported goods, which are not consumed in the United States.
  - D) and the CPI move in the same direction over time.
  - E) has a larger bias than does the CPI.

Answer: C

Topic: GDP price index and the CPI

AACSB: Analytical thinking

- 38) If the price of used cars rises, then the CPI will \_\_\_\_\_ and the GDP deflator will \_\_\_\_\_.
- A) increase; increase
  - B) increase; not change
  - C) not change; increase
  - D) not change; not change
  - E) increase; increase by more than the CPI

Answer: B

Topic: GDP price index and the CPI

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: New

AACSB: Analytical thinking

39) If the price of rocket fuel imported from Russia and used by NASA suddenly increases, then the U.S. CPI will \_\_\_\_\_ and the U.S. GDP deflator will \_\_\_\_\_.

- A) increase; increase
- B) increase; not change
- C) not change; increase
- D) not change; not change
- E) increase; increase by more than the CPI

Answer: D

Topic: GDP price index and the CPI

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: New

AACSB: Analytical thinking

40) When comparing the annual inflation rate in the United States based on the CPI with the annual inflation rate based on the PCE price index, the data show that the two inflation rates

- A) move in opposite directions.
- B) remained constant over the forty year period after 1979.
- C) steadily increased over the forty year period after 1979.
- D) move up and down in similar but not identical ways.
- E) both fluctuate, but the fluctuations have little relationship to each other.

Answer: D

Topic: PCE price index and the CPI

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

41) If we compare the last 30 years of inflation as recorded by the CPI and the PCE price index, we find that the

- A) two measures fluctuate together.
- B) CPI inflation rate has consistently been at least 5 percentage points above the PCE price index inflation rate.
- C) PCE price index inflation rate has consistently been at least 5 percentage points above the CPI inflation rate.
- D) two measures give very different inflation rates for most years.
- E) the CPI inflation rate was always positive, but the PCE price index inflation rate was frequently negative.

Answer: A

Topic: PCE price index and the CPI

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 42) When we compare the records of the CPI and the PCE price index over time, the
- A) two are very different in magnitude.
  - B) PCE price index tends to exceed the CPI.
  - C) CPI tends to exceed the PCE price index.
  - D) two measures are identical.
  - E) CPI tends to exceed the PCE price index when inflation is high, and the PCE price index tends to exceed the CPI when inflation is low.

Answer: C

Topic: PCE price index and the CPI

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 43) When comparing the annual inflation rate in the United States based on the CPI with the annual inflation rate based on the PCE price index, the data show that the
- A) CPI measure tends to exceed the PCE price index measure.
  - B) PCE price index measure tends to exceed the CPI measure.
  - C) CPI measure and the PCE price index measure are equal.
  - D) CPI measure and PCE price index measure move in opposite directions.
  - E) CPI deflator and PCE price index cannot be compared because they measure prices of different baskets of goods and services.

AACSB: Reflective thinking

- 45) An example of the new goods bias in the calculation of the CPI is a price increase in
- A) butter relative to margarine.
  - B) an iPod player relative to a Walkman.
  - C) a 2013 Honda Civic Si Coupe relative to a 2013 Honda Civic Si Sedan.
  - D) textbooks bought through the campus bookstore relative to textbooks bought through Amazon.com.
  - E) a Caribbean cruise for a couple who has never been on a cruise before.

Answer: B

Topic: CPI bias, new goods

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 46) The price of dishwashers has remained relatively constant while the quality of dishwashers has improved. The CPI
- A) is adjusted monthly to reflect the improvement in quality.
  - B) is increased monthly to reflect the increased quality of dishwashers.
  - C) has an upward bias if it is not adjusted to take account of the higher quality.
  - D) has an upward bias because it does not reflect the increased production of dishwashers.
  - E) should not take account of any quality changes because it is a price index not a quality index.

Answer: C

Topic: CPI bias, quality change

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

- 47) Joe buys chicken and beef. If the price of beef rises and the price of chicken does not change, Joe will buy \_\_\_\_\_ for the CPI.
- A) more beef and create a new goods bias
  - B) more chicken and create a commodity substitution bias
  - C) the same quantity of beef and chicken and create a commodity substitution bias
  - D) less chicken and beef and create a quality change bias
  - E) more chicken and eliminate the commodity substitution bias

Answer: B

Topic: CPI bias, commodity substitution bias

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

48) The CPI bias was estimated by the Congressional Advisory Commission on the Consumer Price Index as

- A) understating the actual inflation rate by about 5 percentage points a year.
- B) understating the actual inflation rate by more than 5 percentage points a year.
- C) overstating the actual inflation rate by about 1 percentage point a year.
- D) overstating the actual inflation rate by more than 5 percentage points a year.
- E) understating the actual inflation rate by about 1 percentage point a year.

Answer: C

Topic: CPI bias, magnitude

Skill: Level 2: Using definitions

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

49) A consequence of the CPI bias is that it

- A) decreases government outlays.
- B) increases international trade.
- C) reduces outlet substitution bias.
- D) distorts private contracts.
- E) means that it is impossible to measure the inflation rate.

Answer: D

Topic: CPI bias, private contracts

Skill: Level 1: Definition

Section: Checkpoint 7.2

Status: Old

AACSB: Reflective thinking

50) The fact that the CPI is a biased measure of the inflation rate means government outlays will

- A) increase at a faster rate than the actual inflation rate.
- B) increase at the same rate as the actual inflation rate.
- C) increase at a slower rate than the actual inflation rate.
- D) sometimes increase faster and sometimes increase slower than the actual inflation rate depending on whether the actual inflation rate exceeds 1.1 percent per year or is less than 1.1 percent per year.
- E) None of the above because the bias in inflation measured using the CPI has nothing to do with government outlays.

Answer: A

Topic: CPI bias, government outlays

## 7.6 Essay: The Consumer Price Index

### 1) What are the three stages of constructing the CPI?

Answer: The first stage is to select the CPI market basket. The market basket is determined by surveying the spending habits of consumers by conducting a Consumer Expenditure Survey. The second stage is to check the prices of about 80,000 goods and services in 30 metropolitan areas. This checking is done on a monthly basis. The third stage is to calculate the CPI itself. To calculate the CPI, a period of time is selected as the base reference period and the cost of the CPI market basket using the prices from that period is computed. Then the CPI in any other month equals 100 times the quotient of the cost of the market basket using current-period prices divided by the cost of the market basket in the reference base period.

*Topic: CPI*

*Skill: Level 1: Definition*

*Section: Checkpoint 7.1*

*Status: Old*

*AACSB: Reflective thinking*

### 2) "The market basket used to calculate the CPI is revised monthly to more accurately depict consumers' choices. The price data for the CPI are collected every month." Are the previous sentences true or false?

Answer: The first sentence is false and the second is true. The point of the CPI is to determine how the prices of a fixed basket of goods and services change over time, so the CPI basket is revised only infrequently. However, the prices for the goods and services in the market basket are collected monthly so that the CPI can be computed monthly.

*Topic: CPI, construction*

*Skill: Level 1: Definition*

*Section: Checkpoint 7.1*

*Status: Old*

*AACSB: Reflective thinking*

### 3) If you have the cost of the CPI market basket at current prices and the cost of the CPI market basket at base period prices, how do you calculate the CPI?

Answer: 
$$\text{CPI} = \frac{(\text{Cost of CPI basket at current prices})}{(\text{Cost of CPI basket at base period prices})} \times 100.$$

*Topic: CPI, construction*

*Skill: Level 1: Definition*

*Section: Checkpoint 7.1*

*Status: Old*

*AACSB: Reflective thinking*

- 4) What is inflation and how is it measured using the Consumer Price Index?

Answer: The inflation rate is the percentage change in the price level from one year to the next. In other words, it is the growth rate of the price level. The CPI is a measure of the price level and hence can be used to calculate the inflation rate. The inflation rate is equal to:

$$\text{Inflation rate} = \frac{(\text{CPI in current year} - \text{CPI in previous year})}{\text{CPI in previous year}} \times 100.$$

*Topic: Inflation*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 7.1*

*AACSB: Analytical thinking*

- 5) Assume that after you graduate, you move to a simple economy in which only three goods are produced and consumed: fish, fruit, and meat. Suppose that on January 1, fish sold for \$2.50 per pound, meat was \$3.00 per pound, and fruit was \$1.50 per pound. At the end of the year, you discover that the catch was low and that fish prices had increased to \$5.00 per pound, but fruit prices stayed at \$1.50 per pound, and meat prices had actually fallen to \$2.00. Can you say what happened to the overall CPI, in terms of whether it increased, decreased, or stayed the same? Do you have enough information to calculate the inflation rate? Note, this problem requires no calculation; just state and explain your answers.

Answer: You cannot say what happened to the CPI because you do not know the quantities in the market basket. You also do not have enough information to determine the inflation rate because you need the CPI at the beginning and the end of the year to compute the inflation rate.

*Topic: Inflation*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 7.1*

*Status: Old*

*AACSB: Analytical thinking*

- 6) If the base year CPI market basket costs \$250 and next year the CPI market basket costs \$275, what is next year's CPI?

Answer: The CPI equals  $100 \times (\$275/\$250) = 110$ .

Item	Quantity (2010)	Price (2010)	Quantity (2011)	Price (2011)
Loaves of bread	20	\$3.00	22	\$4.00
Jugs of soda	20	\$2.00	30	\$1.50

- 7) The table above gives the purchases of an average consumer in a small economy. (These consumers purchase only loaves of bread and jugs of soda.) Suppose 2010 is the reference base period.
- What quantities are in the CPI market basket?
  - What is the cost of the CPI market basket using 2010 prices?
  - What is the cost of the CPI market basket using 2011 prices?
  - What is the CPI in 2011?

Answer: a. The quantities in the CPI market basket are the 2010 quantities because 2010 is the reference base period. So, the quantities are 20 loaves of bread and 20 jugs of soda.

b. The cost of the CPI basket using 2010 prices is  $(20 \text{ loaves} \times \$3) + (20 \text{ jugs} \times \$2) = \$100$ .

c. The cost of the CPI basket using 2011 prices is  $(20 \text{ loaves} \times \$4) + (20 \text{ jugs} \times \$1.50) = \$110$ . Note that the quantities used in this calculation are the quantities in the CPI market basket.

d. The CPI in 2011 equals 100 multiplied by the cost of the CPI market basket at 2011 prices divided by the cost of the CPI basket at 2010 (base period) prices. The CPI equals  $100 \times (\$110)/(\$100) = 110$ .

*Status: Old*

*AACSB: Analytical thinking*

Item	Quantity (2010)	Price (2010)	Quantity (2011)	Price (2011)
Restaurant meals	100	\$10.00	100	\$12.00
Weeks of parking	50	\$100.00	50	\$97.50

- 8) The table above gives the purchases of a typical consumer in a country comprised of one large city. These consumers purchase only restaurant meals and parking. The year 2010 is the reference base period.
- Find the total cost of the CPI market basket for 2010 and 2011.
  - What is the CPI in 2010 and in 2011?
  - What is the inflation rate between 2010 and 2011?

Answer: a. The total cost of the CPI market basket in 2010 equals  $(100 \text{ meals} \times \$10) + (50 \text{ parking} \times \$100) = \$6,000$ . The total cost of the CPI market basket in 2011 equals  $(100 \text{ meals} \times \$12) + (50 \text{ parking} \times \$97.50) = \$6,075$ . The quantities are the same in 2010 and 2011. If the quantities differed, the 2010 quantities would be used because 2010 is the base year.

b. The CPI in 2010 is 100 because 2010 is the base period. (Alternatively, the CPI in 2010 equals  $(\$6,000)/\$6,000 \times 100 = 100$ .) The CPI in 2011 equals  $(\$6,075)/(\$6,000) \times 100 = 101.25$ .

c. The inflation rate between 2010 and 2011 equals  $(101.25 - 100)/(100) \times 100 = 1.25$  percent.

Item	Quantity (2010)	Price (2010)	Price (2011)
Oranges	50	\$0.90	\$0.75
Bananas	100	\$0.50	\$0.95
Chicken	200	\$2.00	\$2.50
Beef	100	\$5.00	\$4.80
Bread	300	\$1.75	\$2.00

- 9) The table above gives the CPI market basket for 2010 and 2011. Suppose that 2010 is the reference base period.
- What is the cost of the CPI market basket in 2010?
  - What is the cost of the CPI market basket in 2011?
  - What is the CPI for 2010?
  - What is the CPI for 2011?

Answer: a. The cost of the CPI market basket in 2010 is \$1,520.00.

b. The cost of the CPI market basket in 2011 is \$1,712.50.

c. The CPI for 2010 is 100 because 2010 is the base period.

d. The CPI for 2011 equals  $(\$1,712.50)/(\$1,520.00) \times 100 = 112.66$ .

## 7.7 Essay: The CPI and Other Price Level Measures

- 1) Is the CPI a biased measure of the inflation rate? Explain your answer.

Answer: There are four sources of bias in the CPI measure. The first bias is the new goods bias, which refers to the fact that new goods are continuously replacing old ones. Because the new goods are often both higher quality and higher priced, their introduction complicates measuring the CPI. The new goods bias biases the CPI upwards. Second, the CPI is not always adjusted for improvements in the quality of the products, which is the quality change bias. A price hike that reflects a quality increase often is mistakenly recorded as only a price hike, with no recognition given to the higher quality. Third, consumers substitute relatively lower priced goods for goods that increase in price, which is called commodity substitution. However, the CPI doesn't take this substitution into account, thereby giving rise to the commodity substitution bias. Fourth, when faced with price hikes, consumers switch away from buying at full service stores to buying from discount stores because the prices in the discount stores are lower. Once again, the CPI does not take account of this outlet substitution and so the CPI suffers from the outlet substitution bias.

*Topic: CPI bias, sources*

*Skill: Level 3: Using models*

*Section: Checkpoint 7.2*

*Status: Old*

*AACSB: Written and oral communication*

- 2) "The new goods bias puts a downward bias into the CPI and its measure of the inflation rate." Is the previous sentence correct or not? Explain your answer.

Answer: The sentence is false because the new goods bias puts an upward bias into the CPI and its measure of the inflation rate. The new goods bias occurs when new, higher quality and more expensive goods replace older, lower quality and less expensive goods. Part of the expense of the new goods is to pay for the higher quality of the new goods. But, if the price is not adjusted (downward) to take account of the higher quality, incorporating the new good into the CPI leads to an upward bias in the prices that go to make up the CPI and hence also an upward bias in the inflation rate.

*Topic: CPI bias, commodity substitution bias*

*Skill: Level 2: Using definitions*

*Section: Checkpoint 7.2*

*Status: Old*

*AACSB: Written and oral communication*

3) What is the commodity substitution bias? What effect does it have on the CPI?

Answer: The commodity substitution bias refers to the fact that people switch (substitute) away from goods and services that have risen in price and buy more goods and services that have not risen as much in price. Thus if the price of Coke rises 20 percent while Pepsi's price does not change, many people will substitute Pepsi for Coke. The commodity substitution bias in the CPI occurs because the CPI uses a fixed market basket of goods and services. So, if the market basket contains, say, 10 bottles of Coke and 8 bottles of Pepsi, the market basket will not change even though people change their buying patterns in favor of Pepsi and away from Coke. The change in people's buying patterns offsets, at least to a degree, the effect of higher prices. In the Coke/Pepsi case, by purchasing more Pepsi and less Coke, people have insulated themselves from part of the effect of the higher price of Coke. However the CPI does not take this change into account and so the CPI reflects the full effect of the higher price of Coke, thereby overstating the actual inflation that people experience.

*Skill: Level 2: Using definitions*

*Section: Checkpoint 7.2*

*Status: Old*

*AACSB: Written and oral communication*

4) Explain the CPI bias and how it can distort private contracts and increase government outlays.

Answer: The CPI bias is the point that the CPI overstates the true inflation rate. The amount of the bias has been estimated at 1.1 percentage points per year. Thus when workers sign a contract that links their wages to the CPI in order to adjust the wages to offset inflation, the adjustment is too large. Wages rise by more than is necessary to keep pace with inflation. Thus a contract that might have been designed to keep workers "even" with inflation is distorted so that workers actually gain. Similarly, many government outlays, such as social security, are linked to the CPI. Thus the adjustment in these expenditures exceeds the amount necessary for inflation, and hence the amount of the government's outlays increases by more than is appropriate for inflation.

*Topic: CPI bias, distortions*

*Skill: Level 3: Using models*

*Section: Checkpoint 7.2*

*Status: Old*

*AACSB: Written and oral communication*

5) "The bias in the CPI distorts private contracts because a future payment that is linked to the CPI will be raised above the true increase in the price level." Is the previous sentence true or false?

Answer: The sentence is correct. The fact that the payments increase by more than the true increase in the price level means that one party to the contract benefits more, the higher the inflation rate.

*Topic: CPI bias, distortion of private contracts*

*Skill: Level 3: Using models*

*Section: Checkpoint 7.2*

*Status: Old*

*AACSB: Written and oral communication*

6) What, if any, is the impact of the CPI bias on government spending and taxes?

Answer: About one third of government outlays, such as Social Security, are linked to the CPI so that these sources of government spending increase when the CPI increases. Because the CPI overstates the actual inflation rate, government spending increases by more than is warranted by inflation. Hence the CPI bias increases the amount of government outlays. Additionally, taxes revenue is linked to the CPI because the CPI is used to adjust the income levels at which higher tax rates apply. Because the CPI overstates the actual inflation rate, the income levels are adjusted so they are higher than is appropriate. As a result, the government's tax revenue is lower than otherwise.

## 7.8 Essay: Nominal and Real Values

1) Explain the difference between a nominal value and a real value.

Answer: A nominal value is the actual price that is paid or the actual wage received. If today you pay \$1 for a can of Pepsi, this amount is a nominal value. A real value is adjusted for changes in the price level. To compare prices or wages across years, the nominal values need to be converted to real values. In other words, you need to compare values in the same dollars. This conversion is necessary because a dollar today is not worth the same as a dollar 20 years ago.

- 3) What is the difference between nominal variables and real variables? Discuss the calculations undertaken to determine the real wage rate and the real interest rate. Explain why the real wage rate and real interest rate are real variables.

Answer: Nominal variables are measured using current dollars; real variables are measured using dollars of a given base year. More generally, nominal variables are in terms of current dollars whereas real variables are in terms of the quantity of goods and services that can be purchased. The real wage rate equals the nominal wage rate divided by the CPI. The real interest rate equals the nominal interest rate minus the inflation rate. The real wage rate is a real variable because it provides the purchasing power of an hour's labor. The real interest rate is a real variable because it provides the purchasing power gained as interest on a loan.

- 4) In 1995, the CPI was 152.5 and the price of an economics textbook was \$70.00 and a music CD was \$16.00. If the CPI was 172.3 in 2011, what were the prices of the economics textbook and the music CD in 2011 dollars?

Answer: To adjust the two prices, the ratio of the CPI in 2011 to the CPI in 1995 is needed. This ratio is  $(172.3)/(152.5) = 1.13$ . Then multiply the 1995 prices by this ratio to convert the prices to 2011 dollars. This yields a 2011 dollar price for the textbook of  $(\$70.00 \times 1.13) = \$79.10$  and a 2011 dollar price for the CD of  $(\$16.00 \times 1.13) = \$18.08$ .

- 5) In 1979, the price of gasoline was \$1.389 per gallon and the CPI was 72.6. In 2003, the price of gasoline was \$1.589 per gallon and the CPI was 182.9. Find the real price of gasoline in 1979 and 2003 in terms of base period dollars.

Answer: To adjust the price in 1979, the ratio of the CPI in the base period to the CPI in 1979 is needed. The base period CPI is 100, so this ratio is  $(100)/(72.6) = 1.38$ . Then multiply the 1979 price by this ratio to convert the price to base period dollars, which yields a base period price for the gallon of gasoline of  $(\$1.389 \text{ per gallon} \times 1.38) = \$1.92 \text{ per gallon}$ . To adjust the price in 2003, a similar procedure is followed. The ratio of the CPI in the base period to the CPI in 2003 is  $(100)/(182.9) = 0.55$ . Then multiply the 2003 price by this ratio to convert the price to base period dollars, which yields a base period price for the gallon of gasoline of  $(\$1.589 \text{ per gallon} \times 0.55) = \$0.87 \text{ per gallon}$ .

	Data for 2010	Data for 2010
GDP	(billions of dollars)	(billions of dollars)
Nominal GDP	3,300	4,200
Real GDP	3,300	3,600

- 9) The table above has real and nominal GDP for two years for a foreign country.
- What does the GDP price index equal in 2010? What does the value of the GDP price index tell you about 2010?
  - What does the GDP price index equal in 2011?

Answer: a. The GDP price index equals  $(100) \times (\text{nominal GDP} \div \text{real GDP})$ . In 2010, the GDP price index equals  $(100) \times (\$3,300 \text{ trillion} \div \$3,300 \text{ trillion}) = 100$ . Because the GDP price index equals 100, we can determine that 2010 is a base year.

b. In 2011, the GDP price index equals  $(100) \times (\$4,200 \div \$3,600) = 116.67$ .

- 10) Explain how the nominal wage rate is converted into the real wage rate. Explain why this process of conversion changes the nominal wage rate into the real wage rate.

Answer: The real wage rate equals the nominal wage rate divided by the CPI. The nominal wage rate equals the dollars that are paid for an hour's labor. The CPI is a measure of the prices of the goods and services that the typical consumer purchases. Hence dividing the number of dollars for an hour's labor by the prices for the goods and services purchased gives, as its result, the number of goods and services that can be purchased by the hour's labor.

Topic: Nominal and real wage rates

- 16) Explain how the real interest rate could be negative and how this situation would benefit the borrower.

Answer: When people borrow money, they pay a nominal interest rate to the lender. Inflation decreases the real buying power of the payments made to repay the loan. If the inflation rate is greater than the nominal interest rate, then the real interest rate is negative. In this case, the lender actually loses by lending money to the borrower because the quantity of goods and services the lender can buy with the proceeds of the loan has actually decreased.

- 17) In the late 1970s, the inflation rate was over 10 percent per year. Many home mortgage lending institutions had mortgages outstanding that had been made in the 1960s at nominal interest rates of around 5 percent per year. Many of these lending institutions failed. What can explain the high failure rate of lenders in the late 1970s?

Answer: The real interest rate the lenders were earning was 5 percent per year minus 10 percent per year inflation, making the real interest rate significantly negative, -5 percent per year. With the negative real interest rate, these financial institutions were incurring losses and eventually many were forced into bankruptcy.
